

# CONTENTS

<b>Preface</b>	xi
<b>Chapter</b>	
<b>1 About Atomic Physics and Radiation</b>	<b>1</b>
1.1 Classical Physics	1
1.2 Discovery of X-Rays	1
1.3 Some Important Dates in Atomic and Radiation Physics	2
1.4 Important Dates in Radiation Protection	5
1.5 Sources of Radiation Exposure	9
<b>2 Atomic Structure and Atomic Radiation</b>	<b>10</b>
2.1 The Atomic Nature of Matter (ca. 1900)	10
2.2 The Rutherford Nuclear Atom	12
2.3 Bohr's Theory of the Hydrogen Atom	13
2.4 Semiclassical Mechanics, 1913–1925	18
2.5 Quantum Mechanics	21
2.6 The Pauli Exclusion Principle	24
2.7 Atomic Theory of the Periodic System	26
2.8 Molecules	27
2.9 Solids and Energy Bands	30
2.10 Continuous and Characteristic X-Rays	31
2.11 Auger Electrons	35
2.12 Problems	36
<b>3 The Nucleus and Nuclear Radiation</b>	<b>30</b>
3.1 Nuclear Structure	39
3.2 Nuclear Binding Energies	41
3.3 Alpha Decay	45
3.4 Beta Decay	48
3.5 Gamma-Ray Emission	50
3.6 Internal Conversion	53
3.7 Orbital Electron Capture	54
3.8 Positron Decay	55
3.9 Natural Radioactivity	58
3.10 Activity and Exponential Decay	60
3.11 Specific Activity	64
3.12 Serial Radioactive Decay	65
3.13 Problems	70

<b>4</b>	<b>Interaction of Heavy Charged Particles with Matter</b>	<b>73</b>
4.1	Energy-Loss Mechanisms	73
4.2	Maximum Energy Transfer in a Single Collision	73
4.3	The Bethe Formula for Stopping Power	76
4.4	Mean Excitation Energies	78
4.5	Table for Computation of Stopping Powers	79
4.6	Stopping Power of Water for Protons	80
4.7	Range	81
4.8	Slowing-Down Rate	85
4.9	Limitations of Bethe's Stopping-Power Formula	85
4.10	Problems	86
<b>5</b>	<b>Interaction of Beta Particles with Matter</b>	<b>88</b>
5.1	Energy-Loss Mechanisms	88
5.2	Collisional Stopping Power	88
5.3	Radiative Stopping Power	90
5.4	Radiation Yield	92
5.5	Range	94
5.6	Slowing-Down Times	96
5.7	Single-Collision Spectra in Water	96
5.8	Examples of Electron Tracks in Water	99
5.9	Problems	100
<b>6</b>	<b>Phenomena Associated with Charged-Particle Tracks</b>	<b>103</b>
6.1	Delta Rays	103
6.2	Restricted Stopping Power	103
6.3	Linear Energy Transfer (LET)	105
6.4	Specific Ionization	106
6.5	Energy Straggling	106
6.6	Range Straggling	108
6.7	Multiple Coulomb Scattering	109
6.8	Problems	110
<b>7</b>	<b>The Interaction of Photons with Matter</b>	<b>112</b>
7.1	Mechanisms	112
7.2	Photoelectric Effect	112
7.3	Energy-Momentum Requirements for Photon Absorption by an Electron	114
7.4	Compton Effect	115
7.5	Pair Production	121
7.6	Photonuclear Reactions	121
7.7	Attenuation, Absorption, and Scattering Coefficients	122
7.8	Cross Sections	130
7.9	Problems	131
<b>8</b>	<b>Neutrons, Fission, and Criticality</b>	<b>135</b>
8.1	Introduction	135
8.2	Neutron Sources	135
8.3	Classification of Neutrons	137

8.4	Interactions with Matter	138
8.5	Elastic Scattering	138
8.6	Reactions	141
8.7	Neutron Activation	144
8.8	Fission	146
8.9	Criticality	147
8.10	Problems	149
<b>9</b>	<b>Methods of Radiation Detection</b>	<b>151</b>
9.1	Ionization in Gases	151
9.2	Ionization in Semiconductors	160
9.3	Scintillation	170
9.4	Other Methods	177
9.5	Neutron Detection	180
9.6	Problems	187
<b>10</b>	<b>Radiation Dosimetry</b>	<b>191</b>
10.1	Introduction	191
10.2	Quantities and Units	191
10.3	Measurement of Exposure	194
10.4	Measurement of Absorbed Dose	196
10.5	Measurement of X- and Gamma-Ray Dose	198
10.6	Neutron Dosimetry	199
10.7	Dose Measurements for Charged-Particle Beams	204
10.8	Determination of LET	205
10.9	Dose Calculations	205
10.10	Other Dosimetric Concepts and Quantities	212
10.11	Problems	214
<b>11</b>	<b>Chemical and Biological Effects of Radiation</b>	<b>217</b>
11.1	Time Frame for Radiation Effects	217
11.2	Physical and Prechemical Changes in Irradiated Water	217
11.3	Chemical Stage	218
11.4	Examples of Calculated Charged-Particle Tracks in Water	219
11.5	Chemical Yields in Water	221
11.6	Biological Effects	225
11.7	Sources of Human Data	227
11.8	The Acute Radiation Syndrome	228
11.9	Delayed Somatic Effects	229
11.10	Genetic Effects	231
11.11	Dose-Response Relationships	233
11.12	Factors Affecting Dose-Response Relationships	237
11.13	Problems	240
<b>12</b>	<b>Radiation Protection Criteria and Standards</b>	<b>244</b>
12.1	Objective of Radiation Protection	244
12.2	Elements of Radiation-Protection Programs	244
12.3	Radiation Protection Based on Dose Equivalent	246

12.4	Radiation Protection Based on Combined Dose Equivalent/Risk	247
12.5	Derived and Authorized Limits	251
12.6	Additional Information	252
12.7	Problems	253
<b>13</b>	<b>External Radiation Protection</b>	<b>254</b>
13.1	Distance, Time, and Shielding	254
13.2	Gamma-Ray Shielding	254
13.3	Shielding in X-Ray Installations	259
13.4	Protection from Beta Emitters	271
13.5	Neutron Shielding	273
13.6	Problems	275
<b>14</b>	<b>Internal Dosimetry and Radiation Protection</b>	<b>280</b>
14.1	Objectives and Methodology	280
14.2	Reference Man	280
14.3	Secondary Intake Limits for Workers: ALI and DAC	281
14.4	Committed Dose Equivalent for Internal Exposures	284
14.5	Specific Effective Energy and Specific Absorbed Fraction	285
14.6	Number of Transformations in Source Organs over 50 yr	287
14.7	Dosimetric Model for the Respiratory System	292
14.8	Dosimetric Model for the Gastrointestinal Tract	295
14.9	Dosimetric Model for Bone	296
14.10	Dosimetric Model for Submersion in a Radioactive Gas Cloud	297
14.11	Metabolic Data and Limits for Selected Radionuclides	278
14.12	Problems	302
<b>Appendix</b>		
<b>A</b>	<b>Physical Constants</b>	<b>305</b>
<b>B</b>	<b>Units and Conversion Factors</b>	<b>306</b>
<b>C</b>	<b>Some Basic Formulas of Physics</b>	<b>307</b>
<b>D</b>	<b>Selected Data on Nuclides</b>	<b>309</b>
<b>E</b>	<b>Statistics</b>	<b>313</b>
<b>General Subject Index</b>		<b>317</b>
<b>About the Author</b>		<b>324</b>
