Contents

1. Introduction 1

2. Mathematical Preparation and Rules of Tracing 4
   2.1 Asymptotic Expansion 4
   2.2 The Stokes Phenomenon 8
   2.3 The Stokes Phenomenon Continued: The Airy Functions 10
   2.4 The Rules of Tracing 13

3. Scattering Theory of Atoms and Molecules 17
   3.1 Time-Dependent Scattering Theory 17
   3.2 Time-Independent Scattering Theory 25

4. Elastic Scattering 31
   4.1 The WKB Approximation for Phase Shifts 31
   4.2 Corrections to the WKB Phase Shifts 36
   4.3 The WKB Phase Shifts at Low Energies 42
   4.4 Semiclassical Approximation of Scattering Amplitude 49

5. Inelastic Scattering: Coupled-State Approach 52
   5.1 Primitive Adiabatic WKB Wave Functions 52
   5.2 The Uniform Semiclassical Method 57
   5.3 The Semiclassical Scattering Matrix Elements 69
   5.4 The Diabatic-Representation Approach 72

6. Inelastic Scattering: Time-Dependent Approach 80
   6.1 Canonical and Unitary Transformations 81
   6.2 Time-Dependent Semiclassical Theory 85
   6.3 The Feynman Path Integral Approach 94
   6.4 The Asymptotic Evaluation of the Semiclassical S Matrix 96

7. Curve-Crossing Problems. I 101
   7.1 The Landau-Zener-Stückelberg Theory 101

7.2 Applications of the Uniform Semiclassical Theories 112
7.2.1 The First-Order Magnus Approximation 113
7.2.2 The Stationary-Phase Method 114
7.2.3 A Resummation Method 120
7.2.4 Modified Magnus Approximation 123
7.2.5 Numerical Comparisons 127
7.3 The Diabatic Representation Approach 129

8. Curve-Crossing Problems. II: Multistate Models 135
8.1 Multichannel Curve-Crossing Problems 135
8.2 The Case of n > 3 141

9. Curve-Crossing Problems. III: Predissociations 145
9.1 A Two-State Model 146
9.2 Modified Magnus Approximation 153
9.3 A Multistate Model for Predissociation 157

10. A Multisurface Scattering Theory 165
10.1 Multisurface WKB Solutions 166
10.2 Multisurface Scattering Theory 173

11. Scattering off an Ellipsoidal Particle: The WKB Approximation 179
11.1 Elastic Scattering off an Ellipsoid 180
11.2 The WKB Approximation 185
11.3 Elastic Scattering by a Potential 190
11.4 The WKB Approximation for Spheroidal Harmonics 191
11.5 Accuracy of the Uniform WKB Approximation 198
11.5.1 Eigenvalues 198
11.5.2 Angular Spheroidal Wave Functions 200
11.5.3 Elastic Cross Section 204
11.6 Inelastic Scattering 204

12. Concluding Remarks 207
Appendix 1: Asymptotic Forms for Parabolic Cylinder Functions 210
Commonly Used Symbols 211
