1 THE ATOMIC NATURE OF MATTER AND ELECTRICITY

1.1 Introduction	1
1.2 Kinetic Theory	3
1.3 Atomic Sizes	5
1.4 The Atomicity of Electric Charge—Electrolysis	7
1.5 Electrical Discharges in Gases	8
1.6 The Properties of 'Cathode Rays'	9
1.7 The Nature of Cathode Rays—The Electron	14
★1.8 An Accurate Measurement of e/m for Electrons	15
1.9 Millikan's Experiment and the Quantization of Charge	18
PROBLEMS 1	22

2 THE CONSTITUTION OF THE ATOM AND THE FAILURE OF CLASSICAL PHYSICS

2.1 Introduction	23
2.2 Consequences of Neutrality	23

★ Starred sections may be omitted as they are not required later in the book.

2.3	Atoms and X-rays. The Number of Electrons per Atom	24
2.4	Atomic Models and the Scattering of Alpha Particles	28
2.5	The Alpha Particle	29
2.6	Alpha Particle Scattering on the Thomson Model	31
2.7	The Rutherford Model of the Atom	35
2.8	Comparison of the Rutherford Formula with Experimental Results	43
2.9	Forward Scattering	46
2.10	The Idea of a Cross-section	47
2.11	The Size of the Nucleus	50
2.12	Restatement and Criticisms of the Rutherford Model	51
2.13	The Missing Constant	52
	PROBLEMS 2	53

3 PLANCK'S CONSTANT, RADIATION AND PHOTONS

3.1	Introduction	55
3.2	Black Body Radiation	55
3.3	Atomic Sizes	58
3.4	The Photoelectric Effect	59
3.5	The Difficulties of the Photoelectric Effect from a Classical View	66
★3.6	Time Delay with Very Low Light Intensities	67
3.7	Difficulties of a Photon View of the Photoelectric Effect	69
3.8	The Compton Effect	69
3.9	The Sources of Photons	72
3.10	Radiation—Waves or Particles?	77
	PROBLEMS 3	84

4 ELECTRONS AND WAVES

4.1	The Electron as a Particle	86
4.2	Electrons and Waves	87
4.3	Electron and X-ray Diffraction	87
4.4	The Wavelength of Electrons and Other Particles	93
4.5	Electrons—Waves or Particles?	93
4.6	Probability Waves and Superposition	96
4.7	Representation of a Uniformly Moving Particle	98
4.8	Frequency and Velocity	99
4.9	A Differential Equation for a Particle in Free Space and the Complex Nature of the Wavefunction	101
4.10	The Uncertainty Principle—A Consequence of the Wave Picture	105

★4.11 Further Discussion of the Uncertainty Principle	108
4.12 The Uncertainty Relation between Energy and Time	112
4.13 Further Discussion of the Energy–Time Uncertainty Relation	113
★4.14 An Analytical Example of the Uncertainty Principle	116
PROBLEMS 4	118
5 QUANTUM MECHANICS AND THE SCHRÖDINGER EQUATION	
5.1 Introduction	120
5.2 The Schrödinger Equation	122
★5.3 Some Plausibility Arguments	122
5.4 The Time-independent Schrödinger Equation	124
★5.5 An Alternative Approach to the Time-independent Equation	126
5.6 Boundary Conditions and the Solutions of the Time-independent Schrödinger Equation	127
5.7 Eigenvalues and Eigenfunctions	133
5.8 Orthogonality and Completeness of the Eigenfunctions of H	134
★5.9 The Orthogonality of Eigenfunctions of H belonging to Different Eigenvalues	136
5.10 Operators, Expectation Values and Eigenvalues	138
5.11 Summary	143
PROBLEMS 5	145
6 ANGULAR MOMENTUM IN A CENTRAL FIELD AND ELECTRON SPIN	
6.1 Introduction	146
6.2 Classical Features of Planetary Motion	147
6.3 The Relation between Magnetic Moment and Angular Momentum for Charged Particles	149
6.4 Determination of the Magnetic Moments of Atoms	151
6.5 The Representation of Angular Momentum in Quantum Mechanics	156
6.6 The Eigenvalues of the z -Component of Angular Momentum	159
6.7 The Magnitude and the Other Components of Angular Momentum	160
★6.8 A Proof that We Cannot Know All Three Components of Angular Momentum	162
6.9 The Conventional Description of States with a Definite Angular Momentum	163
6.10 Angular Momentum and the Results of the Stern–Gerlach Experiment	164

6.11	Intrinsic Angular Momentum and Half Integral Values of Angular Momentum	167
6.12	Electron Spin	170
★6.13	The Analysis of Electron Spin	172
★6.14	The Practical Feasibility of Experiments Using the Modified Stern–Gerlach Apparatus	181
★6.15	An Accurate Measurement of the Magnetic Moment of the Electron	184
	PROBLEMS 6	190
7	THE ENERGY LEVELS OF THE HYDROGEN ATOM AND SINGLE-ELECTRON IONS	
7.1	Introduction	192
7.2	The Classical and Quantum Mechanical Hamiltonian of the Problem	193
7.3	The Ground State Solution	199
7.4	Normalization of the Ground State Wavefunction and Other Features of the Solution	204
7.5	Other Spherically Symmetric States of the Hydrogen Atom	208
7.6	Non-spherically Symmetric States of the Hydrogen Atom and Hydrogen-like Ions—the p-States	213
7.7	Higher Angular Momentum States	220
7.8	The Specification of States in Terms of their Quantum Numbers	221
7.9	Electron Spin in the Hydrogen Atom	222
	PROBLEMS 7	223
8	THE PERIODIC TABLE AND THE PAULI EXCLUSION PRINCIPLE	
8.1	Introduction	225
8.2	The Description of an Atom Containing Several Electrons	225
8.3	The Properties of the Elements and the Pauli Exclusion Principle	228
8.4	The Effect of the Pauli Exclusion Principle on the Description of Atoms	235
8.5	The Periodic Table on the Atomic Shell Model	237
8.6	The Indistinguishability of Identical Particles and the Symmetry of Wavefunctions	248
8.7	The Conservation of Symmetry	255
8.8	Exchange Symmetry and the Pauli Exclusion Principle	257
	PROBLEMS 8	258

9 ONE AND TWO ELECTRON SPECTRA

9.1	Introduction	259
9.2	The Angular Momentum and Charge Distribution of Closed Shells	260
9.3	Elementary Perturbation Theory	262
★9.4	Formal Derivation of the First Order Perturbation Theory Result	263
★9.5	Two Examples of Perturbation Calculations	265
9.5.1	Increase in the Nuclear Charge	266
9.5.2	The Effect of the Finite Size of the Nucleus	267
9.6	The Energy Levels of the Alkali Metals	269
★9.7	The Quantum Defect	274
9.8	The Structure of the 3p State in Sodium	276
9.9	The Addition of Angular Momentum	279
9.10	The Spin-Orbit Interaction	284
9.11	The Helium Atom—Introduction	289
9.12	The Ground State of Helium	290
★9.13	Evaluation of the Integral Eq. (9.46a)	293
9.14	Excited States of the Helium Atom and the Effect of Anti-symmetry	295
9.15	The Connection between Symmetry and Total Spin	302
9.16	The Description of the Excited States of Helium	303
9.17	Summary	306
	PROBLEMS 9	306

10 SPECTRAL LINES AND SELECTION RULES

10.1	Introduction	308
10.2	The Selection Rules for Hydrogen and the Alkali Metals	309
10.3	The Properties of Atomic States and the Analysis of Electromagnetic Radiation	309
10.4	The Selection Rules for Electric Dipole Radiation (1)	313
10.5	The Electric Dipole Transition Probability and the Concept of Parity	314
10.6	Parity	316
10.7	Examples of Wavefunctions With and Without a Definite Parity	318
10.8	The Selection Rules for Electric Dipole Radiation (2)	319
	PROBLEMS 10	320

11 CHARACTERISTIC X-RAY SPECTRA

11.1	Introduction	323
11.2	Moseley's Experiments	325

11.3	X-ray Energy Levels and Selection Rules	328
	PROBLEMS 11	330
A	FOURIER SERIES AND FOURIER TRANSFORMS	332
B	NUMERICAL VALUES OF PHYSICAL CONSTANTS	337
C	SOLUTIONS TO PROBLEMS	339
D	READING LIST.	350
	Index	353
	Physical constants	inside back cover
