Chapter 1 Photodissociation Dynamics

R. BERSOHN

1 Introduction	1
Direct and Indirect Dissociations	4
Mistakes	5
2 Diatomic Molecules	5
3 Triatomic Molecules	10
4 Tetra-atomic Molecules	13
5 Penta-atomic Molecules	19
6 Molecules with Six or More Atoms	22
Rapid Dissociations in Very Large Molecules	22
Three-Body Dissociations – Sequential or Simultaneous?	24
Molecular Elimination Processes	26
Alternative Electronic Pathways to Dissociation	27
Unimolecular Dissociations	28

Chapter 2 High-Resolution Photofragmentation–Translational Spectroscopy

A. M. WODTKE and Y. T. LEE

1 Background Information	31
2 Experimental Apparatus	36
3 Laser-Selective Photochemistry in CH₂BrI	39

4 The Dynamics of the U.V. Photodissociation of Simple Polyatomic Molecules	41
5 The Determination of Free-Radical Heats of Formation	45
6 Collision-Free Pyrolysis Experiments	52
The Derivation of Activation Energies from IRMPD Experiments	54
The Position of the Transition State along the Reaction Co-ordinate	56
7 Conclusions	58

Chapter 3 Dissociation of Water in the First Absorption Band: A Model System for Direct Photodissociation

P. ANDRESEN and R. SCHINKE

1 Introduction	61
2 State-to-State Photodissociation	66
Averaging over State-to-State Cross-sections	67
Experimental State Preparation	68
3 Final-State Interaction and the Franck-Condon Limit	69
The Two Different Steps	69
Model for Pure Rotational Excitation	70
The FC Limit in the General Case	75
The FC Limit Including Electronic Fine Structure	75
General Features of the FC Limit	77
4 The Physical Situation of the Photodissociation of H₂O in the First Absorption Band	79
Correlation Diagram and Electronic Structure	80
The Quantum States of H ₂ O and OH	81
The Excited-State Potential Surface	84
Separation of State-to-State Cross-sections	86
5 Results	87
Rotational Distributions	88
Population of Electronic Fine-Structure States	92
Selective Population of Λ -Doublet States	93
The Effect of the Bond Angle in the Parent Molecule	99

6 Total-Absorption Cross-section and OH Vibrational Distributions	101
Calculation	101
The Total-Absorption Cross-section	103
Vibrational Distributions	105
7 Averaging and Synthesis of Temperature-Dependent Product-State Distributions	107
Averaging over Λ -Doublets	107
Synthesis of the Selective Population of Λ -Doublet States	108
Synthesis of Rotational Distributions	109
8 Astronomical Masers	110
9 Conclusions	111

Chapter 4 High-Resolution Photochemistry: Quantum-State Selection and Vector Correlations in Molecular Photodissociation

M. P. DOCKER, A. HODGSON, and J. P. SIMONS

1 Introduction	115
2 Quantum-State-Selected Photodissociation	117
H ₂ O and D ₂ O	118
NH ₃ and ND ₃	125
3 Photofragment Vector Correlations	127
(v, μ)	127
(j, μ)	129
(v, j) and Beyond	129
Examples from Life	131
4 A Forward Look	136

Chapter 5 Photodissociation Processes in NO-Containing Molecules

H. REISLER, M. NOBLE, and C. WITTIG

1 Introduction	139
-----------------------	-----

2 Predissociation of Aliphatic Nitroso Compounds –	
RNO	141
Spectroscopy and Structure	141
Radiationless Processes	143
HNO	145
NCNO	150
CF ₃ NO and CF ₂ CINO	156
Bu ^t NO	157
Summary	161
3 Photodissociation of Aliphatic Nitrites – RONO	162
Spectroscopy	162
Vibrational- and Rotational-Energy Distributions	163
Translational-Energy Distributions	168
Rotational Alignment of the Fragments	171
Λ-Doublet Populations	172
Spin-Orbit Populations	174
Correlations between <i>J</i> and <i>v</i>	174
Summary	174
 Chapter 6 The Dissociation Dynamics of Highly Vibrationally Excited Molecules	
F. F. CRIM	
1 Introduction	177
2 Spectroscopy	179
Vibrational Overtone Spectroscopic Models	179
Vibrational Overtone Spectra	182
3 Dissociation Rates	198
Direct Measurements	199
Indirect Measurements	203
4 Product-State Distributions	204
5 Conclusion	209
 Chapter 7 Characterization and Uses of Ions Generated by Multi-Photon Ionization	
I. POWIS	
1 Introduction	211
2 Multi-Photon Ionization	212

3 Fragmentation	213
Laser Intensity Dependence	213
Ladder Switching and Photon Absorption	214
Kinetic Rate Models	216
Statistical Approaches	217
Time-Resolved Studies	221
4 Ionization of the Resonant Intermediate	224
Vibrational Distribution of the Ion	226
One-Photon Ionization	227
Multiple-Photon Ionization	230
Rotational Distributions	233
5 Application Areas	235
Unimolecular Dissociation Rates	236
Photofragment Spectroscopy	240
State-Selected Ion–Molecule Reactions	242
