

CONTENTS

Preface

(Ra) Radiation Processes

A: One Photon Processes

Ra–A1 Free-Free Transitions

(1) $e + H^+, D^+, \dots$

(2) $e + e$

(3) $e + H$

(4) $H^+ + H$

Ra–A2 Bound-Free Transitions

Ra–A3 Bound-Bound Transitions

Einstein's A -coefficient

Einstein's B -coefficient

Oscillator Strength

Absorption Cross Section

Numerical Values of A and f for Hydrogenlike Atoms

Ra–A4 Other One Photon Processes

B: Multi Photon Processes

Ra–B1 Multiphoton Processes I Neutral Hydrogen Atom

Ra–B2 Multiphoton Processes II Negative Hydrogen Ion

Ra–B3 Two Photon Emission of $H(2s)$

(E) Electron Collisions

A: $e + H$ Collisions (Total Cross Section, Elastic Scattering, Excitation, Ionization)

E–A1 Survey of Experiments

E–A2 Survey of Theoretical Calculations

E–A3 Data

B: $e + H^-$ Collisions (Elastic Scattering, Detachment)

E–B1 Survey of Experiments

E–B2 Survey of Theoretical Calculations

E–B3 Data

C: $e + H^+$ Collisions

E–C Coulomb Scattering

(I) Ion Collisions

A: $H^+(D^+, T^+) + H(D, T)$ Collisions (Elastic Scattering. Excitation. Ionization. Charge Transfer)

I–A1 Survey of Experiments

I–A2 Survey of Theoretical Calculations

I–A3 Data

B: $H^-(D^-, T^-) + H(D, T)$ Collisions (Elastic Scattering. Detachment. Charge Transfer)

I–B1 Survey of Experiments

I–B2 Survey of Theoretical Calculations

I–B3 Data

C: $H^+(D^+, T^+) + H^-(D^-, T^-)$ Collisions (Mutual Neutralization. Detachment)

I–C1 Survey of Experiments

I–C2 Survey of Theoretical Calculations

I–C3 Data

D: $H^-(D^-, T^-) + H^-(D^-, T^-)$

(Re) Recombination. Attachment

Re–A Radiative Recombination $e + H^+ \rightarrow H(nl) + h\nu$

Re–B Collisional–Radiative Recombination

Re–C Radiative Attachment $e + H \rightarrow H^- + h\nu$

Re–D Attachment through Tree-Body Collisions

(N) Collisions between Neutral Atoms

A: $H(D, T) + H(D, T)$ Low Energy Collisions

B: $H(D, T) + H(D, T)$ High Energy Collisions

Elastic Scattering. Excitation. Ionization. Charge Transfer

C: $H^*(D^*, T^*) + H^*(D^*, T^*)$

N–C1 Excitation Transfer

N–C2 $H^* + H^*$ Collisional Ionization

N–C3 $H^* + H^* \rightarrow H_2^+ + e$

(M) Formation and Destruction of Hydrogen Molecules

A: Radiative Association and Dissociation

B: Formation of Molecules by Three-Body Collisions

C: Thermal Dissociation of Molecules

D: Dissociation by Electron Impact

E: Dissociation of H_2^+ and H_2 by Collisions with H , H^+ , H_2 , H_2^+ ,

M–E1 Survey of Experiments

M–E2 Survey of Theoretical Calculations

M–E3 Data

(O) Other Processes and Related Problems

A: Problems Concerning Charged Particles in H and H₂ Gases

(Stopping Powers, Ranges, W-values etc. in H and H₂)

O–A1 Stopping Power

O–A2 Range

O–A3 W-values

B: Equilibrium Charge Distributions of Hydrogen Beams after Passing through Atomic and Molecular Hydrogen Gases

C: Width and Shifts of Spectral Lines in Hydrogen Plasmas

D: The Lifetime of Metastable $2S_{1/2}$ State of Hydrogen

E: Reduction of Ionization Potential in Plasma

F: Relative Intensities of Spectral Lines from Hydrogen Plasmas

(An) Appendix

(1) Cross Section

(2) Relation between Energy and Velocity

(3) Constants of Frequent Use
