Notes on Symbolic Consistency, xxi
Book and Review References, xxiii

CHAPTER 1 STATISTICS AND SPECTRA 1

List of Symbols, 1

1.1 The Problem, 2
1.2 Solutions, 5
1.3 Glossary of Statistical Concepts and Equations of Motion, 18
1.4 The Theory of Probability, 26
1.4.1 *Classical Definition*, 26
1.4.2 *Relative Frequency Definition*, 26
1.4.3 *Conditional Probability*, 26
1.4.4 *Random Variables—A Physical Analogy*, 27
1.4.5 *Probability and Distribution Functions*, 28
1.4.6 *Continuous Distributions*, 31
1.4.7 *Two-Dimensional Continuous Distributions*, 32
1.4.8 *The Normal (Gaussian) Distribution*, 34
1.4.9 *Moment Generating and Spectral Functions*, 35
1.4.10 *Higher Moments of the Gaussian Distribution*, 37
1.4.11 *The Central Limit Theorem*, 37
1.4.12 *Covariance and Autocorrelation Functions*, 37
1.4.13 *The Multidimensional Normal Distribution*, 38

1.5 Stochastic Processes, 39
1.5.1 *The Chapman/Kolmogorov and Smoluchowski Equations*, 41
1.5.2 *Probability Density Diffusion Equations*, 41
1.5.3 *The Wiener Process and Wiener Algebra*, 44

1.6 Classical Brownian Theory, 46
1.6.1 *Interpretation of the Langevin Equation*, 47
1.6.2 *The Properties of $B(t)$*, 48
1.6.3 *Wiener Integrals*, 49
1.6.4 *The Kramers, Fokker–Planck, and Liouville Equations*, 50

1.7 The Liouville Equation—Non-Markovian Processes, 55

1.7.1 *Projection Operators*, 57
1.7.2 *The Memory Function and the Kubo Theorem of Fluctuation-Dissipation. Non-Markovian Processes*, 61
1.7.3 *Mode–Mode Coupling, Single and Multimolecule Motions*, 62
1.7.4 *The Continued Fraction Theorem—Thermodynamic-Equilibrium Averages*, 63

1.8 Spectral Moments, Autocorrelation, and Memory Functions, 69

1.8.1 *Time Fourier Transforms—Spectral Moments*, 71
1.8.2 *The Correlation Function in Quantum Mechanics: Detailed Balancing*, 73
1.8.3 *Memory Functions—Series Expansion*, 75

1.9 Calculation of Equilibrium Averages in Classical Mechanics—Sum Rules for Spectral Analysis, 76

1.9.1 *Angular Momentum Autocorrelation Function*, 76
1.9.2 *Moments of the Orientational Autocorrelation Function*, 78
1.9.3 *Sum Rules*, 80

References, 81

CHAPTER 2 MODELS FOR THE TRANSLATIONAL AND ROTATIONAL MOTION OF MOLECULES 83

List of Symbols, 83

2.1 Introduction, 84

2.1.1 *Solutions of the Smoluchowski Equation*, 84
2.1.2 *Solution of the Smoluchowski Equation in the Presence of an External Potential*, 87

2.2 Solution of the Fokker–Planck Equation, 91
2.3 Solutions of the Kramers Equation, 94
2.4 Review of Brinkman's Procedure for the Solution of Kramers' Equation, 97

2.4.1 *Brinkman's Method of Solving Equations* 2.4.6, 100
2.4.2 *The Method of Risken and Vollmer*, 104

2.5 Criticisms of the Brinkman Procedure, 111

2.6 Rotational Brownian Movement Based on the Smoluchowski Equation, 112

2.6.1 *Rotational Brownian Movement about a Fixed Axis*, 112

2.6.2 *Rotational Brownian Movement in Space Based on the Smoluchowski Equation*, 116

2.6.3 *Linear Response Theory*, 118

2.7 Breakdown of the Debye Theory at High Frequencies, 120

2.7.1 *Sack's Treatment of Inertial Effects*, 122

2.8 Free Rotation in Space, 129

2.9 The Rotational Brownian Movement of the Sphere and Needle, 132

2.10 The Rotational Brownian Movement of Nonspherical Bodies. Evaluation of Angular Velocity Correlation Functions, 142

2.10.1 *Calculation of the Aftereffect Functions*, 145

2.11 Free Rotational Models Under the Influence of Large External Fields, 150

2.11.1 *The Debye Theory for Large Fields*, 151

2.12 The Generalized Langevin Equation—Memory Effects, 155

2.13 Multidimensional Markov Equation for Angular Velocity, 160

2.13.1 *Physical Models*, 161

2.14 Extended Diffusion or Collision Interrupted Rotation, 163

2.15 Free Rotation, 165

Appendix: The Euler Angles (by Mauro Ferrario), 167

References, 172

CHAPTER 3 THE RELATION OF MOLECULAR MOTION TO SPECTRAL BANDSHAPES: ELECTRICAL INTERACTIONS 175

List of Symbols, 175

3.1 Debye's Theory, 176

3.1.1 *The Influence of an Imposed Potential Gradient on a Dipolar Molecule*, 176

3.1.2 *The Lorenz–Lorentz Relation*, 177

3.1.3 *Derivation of Debye's Equation*, 178

3.1.4 *Onsager's Theory of the Relative Permittivity of Dipolar Fluids*, 181

3.1.5 *The Cavity Field*, 182
3.1.6 *Derivation of the Onsager Formula*, 182
3.1.7 *The Consistency of Onsager's Equation*, 185
3.1.8 *Kirkwood's Formula*, 186

3.2 Fröhlich's Theory, 187

3.2.1 *Fröhlich's Treatment of Displacement Polarization*, 189
3.2.2 *A Test of the Consistency of Fröhlich's Equation* (3.2.1.13), 192
3.2.3 *Evaluation of* $\langle M^2 \rangle$, 194
3.2.4 *The Kirkwood–Fröhlich Equation*, 198
3.2.5 *Derivation of the Kirkwood–Fröhlich Equation*, 198

3.3 The Frequency Dependence of the Permittivity, 199

3.3.1 *The Fluctuation–Dissipation Theorem*, 200
3.3.2 *Generalization of Fröhlich's Equations to the Frequency Dependent Case*, 202
3.3.3 *Debye Type Theories*, 203

3.4 The Internal Field, 206

3.4.1 *Frequency Dependence in Onsager Model*, 208
3.4.2 *The Relation Between the* $\mathfrak{A}(\omega)$ *and* $\epsilon''(\omega)$ *from the Debye Theory*, 211
3.4.3 *An Approximate Expression for* $\ddot{g}$ *in Terms of the Absorption Coefficient*, 212
3.4.4 *Collective Motions and Computer Simulations*, 213
3.4.5 *Dipole–Dipole Coupling and Far Infrared Spectroscopy*, 232
3.4.6 *Dipole–Dipole Correlation in Liquid Water—Molecular Dynamics Simulation*, 234
3.4.7 *Dielectric Friction*, 242

3.5 Macro–Micro Correlation Theorems, 242

3.5.1 *Relations of* $C_{\mathrm{M}}^{(11)}$ *and* $C_{\mathrm{u}}^{(11)}(t)$, 247

3.6 Evaluation in the Far Infrared, 257

3.6.1 *Molecular Motion in the Gas*, 259
3.6.2 *The Dense Dipolar Liquids*, 263

Appendix: Molecular Dynamics and the Internal Field Problem, 264

References, 266

CHAPTER 4 EVALUATION OF MODELS IN THE FAR INFRARED 269

List of Symbols, 269

4.1 Background, 271
4.2 Comparison with Data, 276
4.2.1 *Qualitative Description of the Data*, 277
4.2.2 *Molecular Description of the Above Equations*, 310
4.2.3 *Band Shape Analysis in the Far Infrared and Microwave*, 321
4.2.4 *Conclusions and Intensity Analysis*, 330
4.3 Debye Relaxation Times, 334

Appendix A: Fitting Mori Theory to Experimental Data, 336
Appendix B: Volume of Rotation, 341

References, 343

CHAPTER 5 THE INTERACTION OF ROTATION WITH TRANSLATION 345

List of Symbols, 345

5.1 Long Time Tails, 347
5.1.1 *Viscoelastic Theory of the Angular Velocity Autocorrelation Function*, 353
5.1.2 *Shear Waves and Viscoelasticity*, 357
5.2 Translation/Rotation on the Molecular Scale, 360
5.2.1 *Linear Diatomics*, 360
5.2.2 *Rototranslation of Loaded Rough Spheres*, 367
5.2.3 *Mori Approximants for Rototranslation*, 371
5.2.4 *Wiener Algebra of Rototranslation*, 380
5.2.5 *Comparison with Experimental Data*, 389
5.3 Some Effects of Rotation/Translation Interaction, 390
5.3.1 Phenomenological, Microscopic, and "Dilute Gas" Theories of Brownian Rototranslation, 398
5.4 Experimental Method of Detecting Rotation/Translation Interaction, 407

References, 409

CHAPTER 6 EXPERIMENTAL CONSIDERATIONS. AN EVALUATION OF MODELS AND INTEREXPERIMENTAL COMPARISON 411

List of Symbols, 411

6.1 Some Factors that Complicate the Study of the Rotary Dynamics, 413

6.1.1 *The Problem of Collision-Induced Contributions*, 414
6.1.2 *The Problem of Rotation/Translation Coupling*, 416
6.1.3 *The Problem of Rotational/Vibration Coupling*, 425
6.1.4 *The Problem of Cooperative Behavior*, 428
6.1.5 *Some General Remarks*, 430

6.2 The Experimental Techniques, 433

6.2.1 *Magnetic Relaxation Experiments*, 433
6.2.2 *Light Scattering*, 436
6.2.3 *The Infrared Experiment*, 438
6.2.4 *Neutron Scattering*, 439
6.2.5 *Zero–Terahertz Spectroscopy*, 440

6.3 Molecular Dynamics Studies, 445

6.3.1 *Iodomethane*, 445
6.3.2 *Acetonitrile*, 452
6.3.3 *Dichloromethane*, 470

References, 490

CHAPTER 7 THE MOLECULAR DYNAMICS OF SUPERCOOLED LIQUIDS AND GLASSES 492

List of Symbols, 492

7.1 Theory of Defect Diffusion Relaxation, 495
7.2 Models for Molecular Dynamics in Glasses, 503

7.2.1 *Experimental Features for Some Viscous Liquids and Glasses*, 509
7.2.2 *Analysis in Terms of Mean Square Torque*, 522
7.2.3 *Some Applications of Mori Theory*, 525
7.2.4 *Volume of Rotation*, 526

7.3 Thermodynamic Equilibrium in Viscous and Glassy Media: Computer Simulations, 527
7.4 Depolarized Light Scattering and Kerr Effect Relaxation in Viscous Liquids and Glasses, 536

7.4.1 *Comparison of Depolarized Rayleigh Intensity and Permittivity*, 536
7.4.2 *Kerr Effect and Low Frequency Dielectric Relaxation*, 538

Appendix: Mode–Mode Interaction and Depolarized Light Scattering, 539

References, 543

CHAPTER 8 MOLECULAR DYNAMICS OF MESOPHASES 545

List of Symbols, 545

8.1 Dielectric Loss in Mesophases, 546

8.1.1 *Theory of Tensor Permittivity*, 546
8.1.2 *The Internal Field Correction*, 551
8.1.3 *Freed's Theory of the Nematic Phase Dynamics* (1977), 551
8.1.4 *Selected Low Frequency Dielectric Results*, 555
8.1.5 *Depolarized Rayleigh Scattering*, 561
8.1.6 *Magnetic Susceptibility Measurements*, 563
8.1.7 *Microwave Studies of Liquid Crystals*, 565
8.1.8 *Inelastic Neutron Scattering*, 567

8.2 The Far Infrared Spectra of Liquid Crystals, 568

8.2.1 *Far Infrared/Megahertz Spectrum of Cholesteryl Oleyl Carbonate in the Cholesteric Phase*, 576

8.3 Computer Simulations, 580

Appendix: Macro–Micro Relations in the Presence of Mode–Mode Coupling, 583

References, 585

CHAPTER 9 A STUDY OF RELAXATION PHENOMENA THROUGH EQUIVALENT "REDUCED" PROCESSES. NONLINEAR RESPONSE THEORY 586

List of Symbols, 586

9.1 The Fluctuating Force, 587
9.2 Excitation–Relaxation Processes in the Realm of Quantum Mechanics: Radiationless Decay in Molecules, 593
9.3 The RMT for "External" Thermal Baths, 607
9.4 Effects of the Time Duration of Excitation Pulse in the Case of "External" Thermal Baths, 616

9.5 Effects of Strong Irradiation, 621

Appendixes, 628

References, 636

CHAPTER 10 EQUATIONS OF MOTION: MORI THEORY AND SIMPLE MODELS OF RELAXATION PROCESSES 639

List of Symbols, 639

10.1 Introduction, 640
10.2 Quantumlike Approach to Mori Theory, 641
10.3 Mori Theory with Non-Hermitian Liouvillian Operators, 651
10.4 Multidimensional Variables, 656
10.5 The Continued Fraction Expansion for the Stochastic Liouville Equation, 658
10.6 The Replacement of the Generalized Langevin Equation with a Markovian One of Enlarged Dimensions, 661
10.7 The Fokker–Planck Equation Associated with the Classical GLE, 667
10.8 Non-Gaussian, Non-Markovian Case, 670
10.9 Relaxation Process in the Presence of External Excitations, 675
10.10 Emission Spectra in the Presence of Excitation Radiation Fields, 677
10.11 Concluding Remarks, 680

Appendixes, 683

References, 700

CHAPTER 11 THE DYNAMICS OF COLLISION-INDUCED ABSORPTION 703

11.1 Integrated Intensities of Permanent Dipolar Absorption, 704

11.1.1 *Integrated Intensity for Symmetric Tops*, 705
11.1.2 *Comparison with the Sum Rule*, 706
11.1.3 *Use and Misuse of Induced Absorption*, 710

11.2 Mechanisms of Induced Absorption, 713

11.2.1 *The Multipole Moment Tensors*, 715
11.2.2 *Simulation of the Coulombic versus Multipolar Intermolecular Potentials*, 718
11.2.3 *Frost's Theory of Multipole-Induced Absorption*, 722

11.2.4 *Induced Absorption in Linear Molecules*, 729
11.2.5 *Absorption of Nondipolar Liquids, a Continued Fraction Empiricism*, 747
11.2.6 *Effect of Pressure on Liquid Phase Induced Absorption*, 753
11.2.7 *Induced Absorption in Plastic Crystals*, 755

11.3 Induced Absorption and Light Scattering, 758

11.3.1 *Molecular Dynamics Simulation*, 759
11.3.2 *Continued Fraction Representation*, 763
11.3.3 *High Accuracy Study of Scattering from Atoms*, 770

11.4 Computer Simulation of Induced Absorption, 772

11.4.1 *Molecular Dynamics Simulation of the Far Infrared Band of Liquid Nitrogen*, 775

11.5 Features of Induced Absorption in Weakly Dipolar Symmetrical Tops, 777

References, 786

CHAPTER 12 INTERCOMPARISON OF EXPERIMENTAL TECHNIQUES 788

12.1 Introduction, 788

12.1.1 *Survey of the Problem of Consistency*, 789

12.2 Preset Conditions and Liquids for the Coordination Project, 795

12.2.1 *Methylene Chloride* (CH_2Cl_2), 796
12.2.2 *Methyl Fluoride* (CH_3F), 799
12.2.3 *Methyl Iodide* (CH_3I), 802

12.3 Physical Properties, 803

12.3.1 *Methylene Chloride*, 803
12.3.2 *Basic Physical Properties of Methyl Fluoride*, 807
12.3.3 *Physical Properties of Methyl Iodide*, 807

12.4 Bibliography, 808

12.4.1 *Methylene Chloride*, 808
12.4.2 *Methyl Fluoride*, 821

12.5 Results of Literature Search, 830

12.5.1 *Methylene Chloride*, 830

12.5.2 *Methyl Fluoride*, 836
12.5.3 *Methyl Iodide*, 840

12.6 Intercomparison of Experimental Data, 842

12.6.1 *Dielectric and Far Infrared Spectroscopy*, 843
12.6.2 *Infrared Band Shapes*, 846
12.6.3 *Vibration/Rotation Coupling*, 849
12.6.4 *Neutron Scattering*, 851

References, 856

Index, 859
