xv

1 *CLASSICAL ELECTRODYNAMICS*

1.1	Formal Development	1
1.2	The Free Field	5
1.3	Polarization of Radiation	10
1.4	Density of States in a Cavity	11
1.5	Single Charged Particle in an Electromagnetic Field	13
1.6	System of Particles and Fields	15
	References	18

2 *COHERENCE PROPERTIES OF WAVES*

2.1	Fourier Analysis of the Field	20
2.2	Properties of Fourier Transforms	23
2.2.1	Convolution	24
2.3	Fourier Analysis of Wave Trains	27
2.3.1	Spectrum of a Sinusoidal Pulse of Constant Amplitude	28
2.3.2	Spectrum of a Decaying Pulse	30
2.4	Detector Response	32

2.5	Interference of Two Wave Trains	37
2.6	Light Beating Spectroscopy	41
2.7	Intensity Interference	45
2.7.1	Single Point Source	46
2.7.2	Extended Source	48
	References	49

3 *THEORY OF ANGULAR MOMENTUM AND IRREDUCIBLE TENSORS*

3.1	Coupling of Angular Momenta	51
3.2	Transformations under Rotation	53
3.3	Irreducible Tensors	55
3.4	Expansion of the Interaction Hamiltonian	58
	References	62

4 *QUANTIZATION OF THE RADIATION FIELD*

4.1	Introduction	63
4.2	Eigenstates and Eigenvalues	64
4.3	Quantization of the Fields	69
4.4	Phases and Uncertainties	70
4.5	Interaction Representation	72
4.6	Coherent States	73
4.7	Distribution of Photons	76
4.7.1	Coherent Light	78
4.7.2	Incoherent Light	79
4.8	Photon-Atom Interaction	81
4.9	Higher-Order Coherences	84
	References	88

5 *INTERACTION HAMILTONIAN*

5.1	Interaction Representation	90
5.2	Density Operator	94

5.3	Second Quantization	97
5.4	Electric Dipole Interaction	99
	References	102

6 TWO-LEVEL ATOM INTERACTING WITH A SINUSOIDAL FIELD

6.1	Introduction	103
6.2	Rotating Wave	106
6.2.1	Amplitude Equations	106
6.2.2	Matrix Elements	113
6.2.3	Bloch Equations	114
6.2.4	Distribution of Frequencies	117
6.3	Linear Wave	123
6.3.1	Amplitude Equations for a Single Dressed State	123
6.3.2	Amplitude Equations for a Coherent State	126
6.3.3	Bloch Equations	133
6.3.4	Resonances	136
	References	140

7 SPONTANEOUS EMISSION

7.1	Introduction	141
7.2	Weisskopf–Wigner Theory	147
7.2.1	Amplitudes and Decay Rates	147
7.2.2	Probabilities	149
7.3	Fourier Transform Method	151
7.3.1	Amplitude Equations	151
7.3.2	Decay Rates	153
7.3.3	Amplitudes	155
7.3.4	Reduced Differential Equations for the Initial State	156
7.4	Density Matrix Equations	157
7.4.1	Differential Equations and Fourier Transforms	157
7.4.2	Reduced Density Matrix Equations	160
7.4.3	Bloch Equations	163

7.5	Angular Distributions and Decay Rates	164
	References	166

8 *DECAY PROCESSES*

8.1	Introduction	168
8.2	Decay of Excited State to Coupled Ground States	173
8.3	Branching Decay	176
8.4	Cascade Decay	177
8.5	Decay of Coherently Excited States	183
8.6	Decay of Coupled Excited States	186
8.6.1	Amplitude Equations	186
8.6.2	Density Matrix Equation	188
8.6.3	Bloch Equations	189
8.6.4	Frequency Distributions	192
8.7	Decay of Interacting Atoms	202
	References	208

9 *EXCITATION AND FLUORESCENCE*

9.1	Introduction	210
9.2	Resonance Fluorescence	215
9.2.1	Amplitude Equations	215
9.2.2	Decay Rates	217
9.2.3	Probabilities	219
9.3	Level-Crossing and -Anticrossing Spectroscopy	221
9.3.1	Amplitudes and Probabilities	221
9.3.2	Angular Distribution	227
9.3.3	Level-Crossing Signal in Atomic Hydrogen	229
9.4	Optical Double Resonance	234
9.5	Dynamic Stark Effect	236
9.5.1	Amplitudes and Frequency Distributions	238
9.5.2	Density Matrix and Bloch Equations	244
9.5.3	Dipole Moment	247
	References	249

<i>APPENDIX A: GLOSSARY OF SYMBOLS</i>	250
<i>APPENDIX B: CLEBSCH-GORDAN COEFFICIENTS</i>	255
<i>APPENDIX C: ELECTRIC AND MAGNETIC MULTIPOLES</i>	258
<i>APPENDIX D: PROPERTIES OF THE ZETA FUNCTION</i>	262
