Foreword	vii
Acknowledgements	ix
Introduction	xi
Chapter 1 Experimental aspects of ^3H nmr spectroscopy	1
1. Nuclear magnetic properties of tritium	1
2. Chemical shifts	2
3. The Larmor frequency ratio	5
4. Coupling constants	9
5. Isotope effects on chemical shifts	11
6. ^3H nmr signal intensities; relaxation, and nuclear Overhauser effects	12
7. Instrumentation	15
8. Sensitivity and limits of detection in ^3H nmr spectroscopy	16
9. Setting up the spectrometer	18
10. Sample preparation	18
11. Safety	20
Chapter 2 Labelling patterns and methods for tritium labelling	23
1. Chemical syntheses	23
2. Hydrogen–tritium exchange reactions	30
3. Biochemical methods	32
4. Labelling patterns	33
(i) Amino acids (and some peptides)	34
(ii) Carbohydrates	43
(iii) Polycyclic aromatic hydrocarbons	64
(iv) Aromatic hydrocarbons	74
(v) Nucleic acid derivatives	74
(vi) Steroids	94
(vii) Aromatic and heterocyclic compounds	121
(viii) Alkaloids and related compounds	147
(ix) Aliphatic and alicyclic compounds	158

Chapter 3 Applications of tritium nmr spectroscopy	165
1. Analysis: structural analytical applications	166
2. Biochemistry	169
3. Catalysis	181
4. Reaction mechanisms studies	197
5. Environmental chemistry	203
6. Radiation chemistry	207
7. Other analytical applications	210
Concluding remarks	216
Appendix 1 International system of units for radioactivity	219
Appendix 2 Correlation of hydrogen chemical shifts and coupling constants with molecular structure – tables	220
References and Bibliography	227
Index of compounds	238
Subject Index	246
