

# Contents

## Chapter 1 Basic Ideas

1.1. Introduction	1
1.2. Transition to a Classical Description of the Laser	2
1.3. Dipole Approximation, Center-of-Mass Transformation, Ponderomotive Potential	7
1.4. Gauge Transformations	9
1.5. Transitions and Gauge Invariance	12
1.6. Laser Statistics, Fluctuations, and Multimode Operation	13
Notes and References	18

## Chapter 2 States in a Weak–Near-Resonant Laser

2.1. Introduction	19
2.2. Two-State Rotating Wave Approximation	19
2.3. Estimation of Errors	22
2.4. Adiabatic Time Dependence	23
2.5. Excitation	25
2.6. Coherent Trapping in the Three-State Problem	25
Notes and References	29

## Chapter 3 States of an Atom in a Laser

3.1. Introduction	31
3.2. Definition of the States	31
3.3. Weak Nonresonant Field Example—Dynamic Stark Effect	35
3.4. Ultraintense Laser Field Example	37
3.5. Weak Resonant Field Example	39
3.6. Very High Frequency Example	39

3.7. The Two-State Atom in a Low-Frequency Laser, a Solvable Model	41
Notes and References	44

## **Chapter 4 Spontaneous Radiation by Atoms in Lasers**

4.1. Introduction	47
4.2. Effects of Fluorescence in a Two-State Atom	47
4.3. The Fluorescent Spectrum	56
4.4. Correlation Effects	60
Notes and References	62

## **Chapter 5 Deflection of Atoms in Laser Fields and External Fields**

5.1. Introduction	65
5.2. States of the Atom + Laser + External Field	66
5.3. Inclusion of Fluorescence	68
5.4. Inclusion of Center-of-Mass Motion	69
5.5. Discussion of the Force	71
5.6. Deflection by an Inhomogeneous Laser	73
Notes and References	76

## **Chapter 6 Potential Scattering of Charged Particles in a Laser Field**

6.1. Introduction	77
6.2. States of the Free Electron	77
6.3. Formalism and the Born Approximation	83
6.4. A Theorem for Low-Frequency Lasers and Nonresonant Scattering	86
6.5. Resonant Potential Scattering in a Low-Frequency Laser	94
Notes and References	96

## **Chapter 7 Ionization**

7.1. Introduction	99
7.2. Resonant and Nonresonant Two-Photon Ionization by a Weak Laser	99

7.3. Resonant Ionization for More than Two Photons	113
7.4. Angular Distribution of Electrons from Resonant Multi-channel Ionization	117
7.5. Multiphoton Ionization in Multiple Energy Continua	121
7.6. Multiphoton Ionization in an Ultraintense Laser Field	125
Notes and References	133
 <b>Chapter 8 Electron-Atom Scattering in a Laser Field</b>	
8.1. Introduction	135
8.2. Formal Theory	136
8.3. Weak Resonant Laser	138
8.4. More Intense Resonant Laser	148
8.5. Intermediate-State Resonance	152
8.6. Low-Frequency Laser	152
Notes and References	158
	164
 <b>Chapter 9 Atom-Atom Scattering in the Field of a Laser</b>	
9.1. Introduction	165
9.2. Degenerate Charge Transfer in the Field of a Laser	171
9.3. Laser-Induced Reactions	176
9.4. Nontransitory Resonance in a Weak Laser	180
9.5. Nonresonant Modification of Reactions	183
9.6. Modification of Long-Range Potentials	187
Notes and References	188
 <b>Appendix: The Effect of an Adiabatically Switched Laser on an Atom with a Continuum</b>	
	191
 <b>INDEX</b>	
	197
