<i>Preface</i>	v
Chapter 1 Introduction	1
Chapter 2 Mathematical Foundations	5
2.1 Measure	6
2.2 Spaces of functions	17
2.3 Analysis of measures	33
2.4 Analyticity	59
2.5 Quantum mechanics and Hilbert space	65
2.6 Operator analysis and spaces of operators	78
2.7 Self-adjoint extensions—operators and forms	94
2.8 The Schrödinger equation	105
Chapter 3 Time-dependent Scattering Theory—First Steps	129
3.1 Types of asymptotic evolution	129
3.2 Wave operators—the general theory	140
3.3 Asymptotic limits of momentum observables	146
3.4 Further extensions and developments	154
Chapter 4 The Structure of Wave Operators	157
4.1 Wave operators and asymptotic completeness	157
4.2 The wave operator as a spectral integral	166
4.3 The wave and scattering operators for many-channel systems	177

Chapter 5	The Free Hamiltonian and its Perturbations	181
5.1	The free Hamiltonian in one dimension	181
5.2	Perturbations of the free Hamiltonian in one dimension	191
5.3	The free Hamiltonian in three dimensions	193
5.4	L^2 perturbations of the free Hamiltonian	214
5.5	L^1 perturbations of the free Hamiltonian	222
Chapter 6	The Schrödinger Operator	231
6.1	The minimal operator and its adjoint	231
6.2	Limit point and limit circle	237
6.3	Boundary conditions and self-adjoint extensions	245
6.4	Locality, reality and analyticity	254
6.5	Eigenfunction expansions and the spectral matrix	263
6.6	Regions of meromorphy	277
Chapter 7	Spectral Analysis of the Schrödinger Operator	281
7.1	The Sturm–Liouville operator	281
7.2	Subordinacy	286
7.3	Spectral theory and eigenfunction expansions for the absolutely continuous spectrum	295
Chapter 8	Scattering by Central Potentials	305
8.1	Short- and long-range asymptotics	305
8.2	Short- and long-range wave operators	320
Chapter 9	Scattering in Three Space Dimensions	327
9.1	Short- and long-range wave operators	327
9.2	A mathematical description of a scattering experiment	341
9.3	The scattering cross-section	353
9.4	The Lippmann–Schwinger equation	363
9.5	Partial-wave analysis	375
9.6	Wave operators for two- and three-particle scattering	380
9.7	Back to one dimension	390
Chapter 10	Localization	393
10.1	Localization in scattering theory	393
10.2	Localization in position and energy	394

Chapter 11	The Trace Method in Scattering Theory	405
11.1	The Trace Theorem	405
11.2	Wave operators and completeness by trace methods	413
Chapter 12	Asymptotic Completeness and the Generator of Dilations	421
12.1	Completeness for short-range potentials	421
12.2	Resolvent estimates and commutators	433
12.3	Completeness for long-range potentials	455
Chapter 13	Bound States and Scattering States	467
13.1	The Asymptotic Decomposition Theorem	467
13.2	Classification of singular points	474
Chapter 14	Scattering Theory in Context	481
14.1	The mathematical context	482
14.2	Foundations of scattering theory in Hilbert space	484
14.3	Foundations of spectral theory	486
14.4	Scattering of particles and systems of particles	487
14.5	Techniques of scattering theory	489
14.6	Spectral and scattering phenomena—some examples	490
