

## CONTENTS

### I. INTRODUCTORY PRESENTATION

|                                                              |   |
|--------------------------------------------------------------|---|
| Spectroscopy of Molecular Ions - A Historical Survey . . . . | 1 |
| A. Carrington                                                |   |

### II. MICROWAVE AND LASER SPECTROSCOPY OF MOLECULAR IONS

|                                                                                     |    |
|-------------------------------------------------------------------------------------|----|
| Microwave Studies of Molecular Ions . . . . .                                       | 11 |
| R.C. Woods                                                                          |    |
| Fast-Beam Laser Spectroscopy of Molecular Ions . . . . .                            | 17 |
| W.H. Wing                                                                           |    |
| Vibration-Rotation Spectroscopy of the $\text{HD}^+$ Ion . . . . .                  | 27 |
| A. Carrington                                                                       |    |
| Structure of Molecular Ions from Laser Magnetic<br>Resonance Spectroscopy . . . . . | 33 |
| R.J. Saykally, K.G. Lubic, and K.M. Evenson                                         |    |
| Laser-Induced Fluorescence of Trapped Molecular Ions . . . .                        | 53 |
| J.S. Winn                                                                           |    |

### III. SPECTROSCOPIES OF MOLECULAR IONS (IR, Visible, UV, and Photoelectron)

|                                                                                                          |     |
|----------------------------------------------------------------------------------------------------------|-----|
| Determination of Molecular Ion Structures by<br>Photoelectron Spectroscopy . . . . .                     | 69  |
| G.L. Goodman and J. Berkowitz                                                                            |     |
| Gas-Phase Structure Studies of Open-Shell Organic<br>Cations by Means of Their Radiative Decay . . . . . | 125 |
| J.P. Maier, O. Marthaler, L. Misev, and<br>F. Thommen                                                    |     |

|                                                                                                  |     |
|--------------------------------------------------------------------------------------------------|-----|
| Infrared Absorption Spectra of Molecular Ions in<br>Solid Argon . . . . .                        | 153 |
| L. Andrews                                                                                       |     |
| Visible and Ultraviolet Spectra and Photochemistry<br>of Molecular Ions in Solid Argon . . . . . | 183 |
| L. Andrews                                                                                       |     |

### Contributed Papers

|                                                                                                                         |     |
