Contents of Part A	xvii
------------------------------	------

Chapter 1. Ground-State Potential Surfaces and Thermochemistry
Marie C. Flanigan, Andrew Komornicki, and James W. McIver, Jr.

1. Introduction	1
2. Macroscopic Properties from Molecular Calculations	2
2.1. A Scheme for Thermodynamic Parameters	2
2.2. The Need for Geometry Calculations	4
2.3. Statistical Thermodynamic Formalism	4
2.4. Activation Parameters	5
2.5. The Zero-Point Vibrational Correction	7
2.6. The Partition Function	8
3. Semiempirical Molecular Orbital Theory for Closed Shells	10
3.1. The Nature of Semiempirical Theory	10
3.2. Parametrization	11
3.3. Strengths and Limitations for Potential Surface Calculations	12
4. Exploring Potential Energy Surfaces	14
4.1. The Size and Shape of Potential Surfaces	14
4.2. Geometry Optimization	18
4.3. Force Constants	20
5. Selected Results and Comparisons	21
5.1. Introduction	21
5.2. Molecular Geometries	22
5.3. Energies of Equilibrium States	23
5.4. Activation Parameters	41

5.5. Vibrational Frequencies	43
6. Conclusions and an Opinion	45
References	45

Chapter 2. Electronic Excited States of Organic Molecules

R. L. Ellis and H. H. Jaffé

1. Introduction	49
2. The Hamiltonian Operator	50
3. The Zeroth-Order Approximation	51
4. The Electronic Wave Function	52
4.1. The All-Valence-Electron Approximation	52
4.2. The SCF Procedure	55
4.3. The Trial Functions	56
4.4. The ZDO Approximation	63
4.5. The Semiempirical Approximations	64
4.6. Comparison of Various Methods	66
5. The Interaction of Matter and Electromagnetic Fields	69
5.1. Transition Moments	70
5.2. Photoelectron Cross Sections	73
6. Spin-Orbit and Spin-Spin Coupling	74
6.1. Spin-Orbit Coupling	74
6.2. Spin-Spin Coupling	78
7. Vibrationally Induced Transitions	81
7.1. Herzberg-Teller Theory	81
7.2. Born-Oppenheimer Breakdown Theory	84
8. Application of ZDO Methods	87
8.1. Simple Organic Compounds	87
8.2. Inorganic Compounds	88
8.3. Interacting Nonplanar π -Electron Systems	89
8.4. Triplet States	89
8.5. Free Radicals and Doublet States; Photoelectron Spectra	89
8.6. Rydberg Transitions	90
8.7. Treatment of d Orbitals	90
8.8. Geometry of Excited States	91
8.9. Spin-Orbit, Spin-Spin, and Vibronic Coupling	91
8.10. Ionization Potentials	92
8.11. Dipole Moments and Polarizabilities	92
8.12. Miscellaneous Studies	93
9. Conclusions	93
References	93

Chapter 3. Photochemistry*Josef Michl*

1. Introduction	99
2. Photochemical Processes	100
3. Semiempirical Methods	103
3.1. Model Hamiltonians	104
3.2. Solving the Models	112
4. Examples of Application	116
4.1. Phototautomerism	117
4.2. Electrocyclic Reactions	117
5. Summary and Outlook	121
References	123

Chapter 4. Approximate Methods for the Electronic Structures of Inorganic Complexes*C. J. Ballhausen*

1. Inorganic Complexes Contrasted to Organic Molecules	129
2. The Orbitals	130
3. The Ligand Field and the Crystal Field Methods	134
4. Koopmans' Theorem	139
5. Spin-Orbit Coupling	140
6. Nonempirical CNDO and INDO Methods	142
7. Semiempirical CNDO and INDO Methods	145
8. The Excited States	146
9. The Crystal Field Theory	149
10. Extended Hückel Theory. Angular Overlap Model	156
11. An Example, $\text{Ni}(\text{CN})_4^{2-}$. Conclusions	157
References	160

Chapter 5. Approximate Molecular Orbital Theory of Nuclear and Electron Magnetic Resonance Parameters*David L. Beveridge*

1. Introduction	163
2. Magnetic Resonance Parameters	165
3. Molecular Quantum Mechanics	169
3.1. Molecular Orbital Theory	169

3.2.	Approximate Molecular Orbital Theory	173
3.3.	Perturbation Theory	175
4.	NMR Shielding Constants and Chemical Shifts	178
4.1.	Quantum Mechanical Development of σ_N	179
4.2.	Calculation of Shielding Constants	182
5.	NMR Nuclear Spin Coupling Constants	187
5.1.	Quantum Mechanical Development of K_{MN}	188
5.2.	The Fermi Contact Term	189
5.3.	The Orbital and Dipolar Terms	190
5.4.	Calculations of J_{MN}	191
6.	ESR g -Tensors	196
7.	ESR Electron–Nuclear Hyperfine Tensors	198
7.1.	Quantum Mechanical Development of $\mathbf{T}_N$	199
7.2.	Isotropic Hyperfine Coupling	201
7.3.	Calculations of Isotropic Hyperfine Constants	204
7.4.	Anisotropic Hyperfine Coupling	210
7.5.	Calculations of Anisotropic Hyperfine Constants	211
	References	212

Chapter 6. The Molecular Cluster Approach to Some Solid-State Problems

Richard P. Messmer

1.	Introduction	215
1.1.	Perfect Crystalline Solids and the Bloch Theorem	217
1.2.	Imperfect Solids and the Breakdown of Bloch's Theorem	219
2.	Solid-State Theory Approaches to Surface Problems	221
2.1.	The Perfect Surface	221
2.2.	Surface–Adsorbate Interactions	225
3.	Molecular Cluster Approach to Surface Problems	227
3.1.	Nonmetals	228
3.2.	Metal Clusters	229
3.3.	Metals and Adsorbates	236
4.	Summary	244
	References	244

Chapter 7. Electron Scattering

Donald G. Truhlar

1.	Introduction	247
----	------------------------	-----

2. Explicit Inclusion of Electronic Excitations	252
2.1. Expansions Including Free Waves	252
2.2. L^2 Expansions	278
3. Neglect of Electronic Excitation Except for Final State	279
3.1. Strong-Coupling, Static-Exchange, and Distorted-Wave Approximations	279
3.2. High-Energy Approximations	279
4. Inclusion of Effect of Omitted Electronic States by Approximate Polarization Potentials	280
References	282
