
Contents

1. INTRODUCTION	1
1.1. The Idea of Pseudopotentials; Hellmann's Work	1
1.2. Ab Initio versus Model Methods in the Quantum Theory of Atoms and Molecules	5
1.3. The Goals of Pseudopotential Theory; Scope of the Book	7
1.4. Notation, Nomenclature, and Referencing	9
2. EXACT PSEUDOPOTENTIALS FOR ONE-VALENCE-ELECTRON SYSTEMS	12
2.1. The Method of Szepfalusy	12
2.2. The Method of Phillips and Kleinman	18
A. <i>The Formulation of the Method</i> , 18	
B. <i>Exact Solutions of the Phillips–Kleinman Equation for Atoms</i> , 20	

2.3.	The Method of Cohen and Heine	25
	A. <i>Indeterminacy of the PK Solutions</i> , 25	
	B. <i>Kinetic Energy Minimization</i> , 27	
	C. <i>General Form of the PK-type Potentials</i> , 30	
	D. <i>Cancellation Theorem</i> , 34	
2.4.	The Method of Weeks and Rice	35
2.5.	Pseudopotentials for Correlated Core	42
	A. <i>Introduction</i> , 42	
	B. <i>The Method of Öhrn and McWeeny</i> , 43	
	C. <i>The G1 Method of Goddard</i> , 46	
	D. <i>Core Polarization</i> , 47	
3.	DENSITY-DEPENDENT PSEUDOPOTENTIALS FOR ONE-VALENCE-ELECTRON SYSTEMS	49
3.1.	Derivation of the Density-Dependent Pseudopotential from the Thomas–Fermi Model	49
	A. <i>Introduction</i> , 49	
	B. <i>Hellmann's Method</i> , 50	
3.2.	Derivation of the Density-Dependent Pseudopotential from the Exact Theory	53
	A. <i>Szefpalusy's Method</i> , 53	
	B. <i>The Author's Method</i> , 57	
3.3.	A Survey of Formulas for Density-Dependent Pseudopotentials	58
	A. <i>Pseudopotentials for Atoms and Molecules</i> , 58	
	B. <i>Pseudopotentials for Atoms</i> , 60	
	C. <i>Pseudopotentials for Cylindrical Symmetry</i> , 70	
3.4.	The Virial Theorem	72
3.5.	Test Calculations	76
4.	MODEL PSEUDOPOTENTIALS FOR ONE-VALENCE-ELECTRON SYSTEMS	79
4.1.	Introduction	79
4.2.	Guidelines for the Construction of Model Potentials	80
4.3.	A Survey of Model Potentials	86

5. THE ALL-ELECTRON PSEUDOPOTENTIAL MODEL (APM)	95
5.1. Introduction	95
5.2. Exact All-Electron Pseudopotential Theory	96
5.3. The All-Electron Pseudopotential Model	104
A. <i>Density-Dependent Pseudopotentials</i> , 104	
B. <i>Pseudo-Orbital Condition</i> , 106	
C. <i>Formulation of the APM</i> , 108	
5.4. Single Zeta Calculations for the Average Energy of Atomic Configurations	109
5.5. $X\alpha$ Model with Pseudopotentials	119
 6. THE QUANTUM THEORY OF ATOMS WITH TWO VALENCE ELECTRONS	 120
6.1. Ab Initio Theory	120
A. <i>Introduction</i> , 120	
B. <i>The Theory of Fock, Veselov, and Petrashen: Correlated Pair Function for the Valence Electrons</i> , 121	
C. <i>Some Mathematical Problems Connected with the Calculation of Pair Functions</i> , 130	
6.2. Pseudopotential Theory: Exact Formulation	134
6.3. Pseudopotential Theory: Model Formulation	145
A. <i>Introduction</i> , 145	
B. <i>The Derivation of the Model Hamiltonian</i> , 146	
C. <i>Representative Calculations</i> , 150	
 7. THE QUANTUM THEORY OF ATOMS WITH ARBITRARY NUMBER OF VALENCE ELECTRONS	 153
7.1. The Exact Pseudopotential Transformation of the Valence-Electron Hartree–Fock Equations	153
7.2. Model Potentials for Atoms with Many Valence Electrons	163
A. <i>Guidelines for the Models and Error Estimation</i> , 163	
B. <i>A Survey of the Models</i> , 167	

7.3.	Ab Initio and Exact Pseudopotential Theory with Correlated Wave Function for the Valence Electrons	177
A.	<i>Introduction</i> , 177	
B.	<i>Ab Initio Theory</i> , 178	
C.	<i>Exact Pseudopotential Theory</i> , 183	
7.4.	Model Hamiltonians for n -Valence Electron Atoms	187
A.	<i>The Derivation of the Model Hamiltonian</i> , 187	
8.	THE PSEUDOPOTENTIAL THEORY OF MOLECULES	195
8.1.	Introduction	195
8.2.	Summary of Earlier Developments	197
8.3.	The Derivation of the Effective Pseudopotential Hamiltonian for a Diatomic Molecule	200
8.4.	Discussion of the Derivation of the Molecular Effective Hamiltonian	212
8.5.	Representative Calculations	223
9.	EXCITED STATES AND RYDBERG STATES	234
9.1.	Introduction	234
9.2.	The Optical Spectrum of Atoms with One Valence Electron	235
9.3.	Calculations for Atoms with Two Valence Electrons	244
9.4.	The Rydberg States of Atoms and Molecules: the Method of Hazi and Rice	245
9.5.	Further Contributions to the Theory of Excited States	253
APPENDIX A.	Exact Solutions of the Phillips–Kleinman Equation for Atoms	257
APPENDIX B.	Orthogonality Projection Operators for One Valence Electron	268
APPENDIX C.	The Hermitian Character of the Operator PHP	273
APPENDIX D.	Orthogonality Projection Operators for the APM Model	274

APPENDIX E.	Orthogonality Projection Operators for Many Valence Electrons	276
APPENDIX F.	The Invariance of the Total Wave Function to the Orthogonalization of its Correlated Part	279
APPENDIX G.	The Matrix Components of the Hamiltonian Operator with Respect to Correlated Wave Functions	281
APPENDIX H.	The Derivation of the Equation for the Correlated Pair Function of the Valence Electrons	283
APPENDIX I.	The Mathematical Properties of the Equation for the Correlated Pair Function	286
APPENDIX J.	Some Mathematical Properties of the Exact Pseudopotential Equation for Two Valence Electrons	291
APPENDIX K.	Maximum Smoothness Pseudo-Orbitals (MSPO's)	295
