1 Periodic Table with Nuclides	1
1.1. Basic knowledge of atomic nuclei and nuclear stability	1
1.2. Periodic Table with Nuclides: Its outline and explanation for users	7
Fig. I.1. Periodic Table with Nuclides	13
Table I.1. Stabilities of Isobaric Nuclides	26
2 Nuclear Properties, Disintegration and Standards	103
2.1. Nuclear properties	103
2.2. Radioactive disintegration and standards	106
Table II.1. Nuclear Properties of Nuclides	109
Table II.2. Energies and intensities of γ -rays emitted from radioactive nuclides	124
Fig. II.1. Natural Radioactive Series of Heavy Elements	235
Table II.3. α -Particle Energies and Intensities for Nuclides	236
Table II.4. Electron Binding Energies	246
Fig. II.2. Origin of X-ray Spectra	249
Table II.5. X-Ray Energies and Intensities	250
Fig. II.3. γ -Ray Spectrum of the Standard ^{152}Eu	254
Table II.6. γ -Ray Energy Standards	255
Table II.7. α -Particle Energy Standards	256
Table II.8. α -Particle Energy Standards	257
Table II.9. Internal Conversion Standards	257
3 Nuclear Reactions	259
3.1. Nuclear reactions compared with chemical reactions	259
3.2. Experimental features of nuclear reactions	260
3.3. Production of radioisotopes and transuranium elements	262
Fig. III.1. Reaction Cross Sections – Smoothed Approximation as Functions of Mass and Energy	263
Table III.1. Reaction Cross Sections for 14 MeV Neutrons .	267
Fig. III.2. Neutron Cross Section for Cadmium and Indium	274
Fig. III.3. Typical (n, xn') Reactions and Their Energy and Angular Distributions	275
Table III.2. Neutron Capture γ -Rays	277

Fig. III.4.	Production of Missing Radioactive Series: Neptunium Series ($4n + 1$) by Reactor Neutron Irradiation	279
Fig. III.5.	Production of Transuranium Elements by Successive Neutron Capture Accompanied by β -Decay in a Nuclear Reactor	280
Fig. III.6.	Mass-Yield Curves for Neutron Fission of Heavy Nuclides	281
Table III.3.	Fission Product Chains and Their Yields in Termal Neutron Fission of ^{235}U	283
Fig. III.7.	Proton-Induced Fission Cross Section	291
Table III.4.	Production of Radionuclides by Thermal Neutron Capture - (n, γ) Reactions	292
Table III.5.	Production of Radionuclides by Thermal Neutrons - (n, p) and (n, α) Reactions	304
4 Interaction of Radiation with Matter and Its Detection	305
4.1.	Interaction of radiation with matter	305
4.2.	Radiation detection	309
Fig. IV.1.	Range and Stopping Power for Electrons in Liquid Hydrogen, Water, Beryllium and Aluminium	312
Fig. IV.2.	Range and Stopping Power for Heavy Charged Particles	313
Fig. IV.3.	Absorption of Photons in Matter	315
Table IV.1.	Total Absorption Coefficient μ (cm^2/g) and Energy Absorption Coefficient μ_{en} (cm^2/g) for Photons	317
Fig. IV.4.	Dose Bild-up Factor (B) for γ -Rays in Matter as a Function of μ/l	324
Fig. IV.5.	Dose Bild-up Factor (B) for γ -Rays in Matter as a Function of Atomic Number (Z)	325
Fig. IV.6.	Backscattering of β -Particles	326
Fig. IV.7.	Attenuation of Fast Neutrons in Cylindrical Containers of Paraffin and Water	327
Table IV.2.	Efficiency (Absolute) of NaI(Tl) Detectors	328
Fig. IV.8.	Peak/Total Ratio for a 3" Diameter x 3" Height NaI(Tl) Crystal	329
Fig. IV.9.	Ge(Li) Detector Efficiency for γ -Rays	329
Fig. IV.10.	Relative Efficiency Curve for a 29 cm^3 Ge(Li) Detector	330
5 Radioactive Nuclides in Chemistry and Related Fields	331
5.1.	Radioactive nuclides as tracers and nuclear probes	331
5.2.	Isotope dilution analysis	332

5.3. Radioactivation analysis	333
5.4. Hot atom chemistry	333
5.5. Mössbauer spectroscopy	334
Fig. V.1. Elements Determined Substoichiometrically	336
Table V.1. A Survey of Substoichiometry	337
Fig. V.2. Neutron Activation Analysis of Elements	339
Table V.2. Sensitivity of Radioactivation Analysis by Slow Neutrons in a Nuclear Reactor	340
Fig. V.3. Chemical Effects of Nuclear Transformations	345
Fig. V.4. Charge Distribution After Nuclear Transformations	346
Table V.3. Typical Examples of Chemical Effects of Nuclear Transformations	347
Table V.4. Chemical Effects of Nuclear Decay	350
Table V.5. Ion Implantation and Recoil Implantation	352
Fig. V.5. Elements Studied by Mössbauer Spectroscopy	354
Table V.6. Table of Nuclear Data for Mössbauer Transitions	355
Table V.7. Nuclides Available for PAC Experiments	362
6 Nuclear Fusion in Science and Technology	363
Table VI.1. Thermonuclear Reactions	367
Table VI.2. Tritium Production Reactions	369
Table VI.3. Characteristics of Recoil Tritium Produced by Thermal Neutron Irradiation	370
Table VI.4. Radioactive Decay Characteristics of Tritium	371
Table VI.5. Thermodynamic Properties of Hydrogen Isotopes	372
Table VI.6. Thermodynamics Properties of Oxides of Hydrogen Isotopes	372
Table VI.7. Vapor Pressure and Heat of Sublimation for Solid Hydrogen Isotopes	373
Table VI.8. Vapor Pressure and Heat of Vaporization for Liquid Hydrogen Isotopes	373
Table VI.9. Sound Velocity in Gaseous Hydrogen Isotopes .	374
Table VI.10. Viscosity of Gaseous Hydrogen Isotopes	374
Table VI.11. Spectroscopic Constants for Hydrogen Isotopes	375
Table VI.12. Perfect Gas Equilibrium Constants for Hydrogen Self-Exchange Reactions	375
Table VI.13. Dissociation Pressure of Uranium Tritide	376
Table VI.14. Useful Data for Mass Spectrometry with Tritium	376
7 Radioactive Nuclides in Life Science	377
Table VII.1. Typical Radiopharmaceuticals and Their Applications	381

Table VII.2.	Radiation Dose to Adults for Typical Radiopharmaceuticals	385
Fig. VII.1.	Short-Lived Nuclides for Radiopharmaceuticals	388
Table VII.3.	Production of Short-Lived Nuclides for Nuclear Medicine	389
Table VII.4.	Characteristics of Some Medically Important Radionuclides	394
Table VII.5.	Remaining Parts in Radioactive Decay	408
Fig. VII.2.	Neutron Dose Effects in Materials	409
8 Environmental radioactivity and radiation safety	411
8.1.	Environmental radioactivity	411
8.2.	Radiation safety	412
Table VIII.1.	Isolated Radionuclides in Nature	415
Table VIII.2.	Light Radionuclides Found in Rain Water (Except for Fission Products)	416
Fig. VIII.1.	γ -Ray Spectra of Natural Uranium with Daughters	417
Fig. VIII.2.	γ -Ray Spectra of Thorium with Its Daughters .	418
Table VIII.3.	Radiation Exposure for Human Bodies and Its Limits	419
Table VIII.4.	Internal Exposure in Human Bodies	420
Fig. VIII.3.	Proton Energy and Exposure Rate Constants T_δ	425
Table VIII.5.	Exposure Rate Constants for Nuclides	426
Table VIII.6.	Annual Limits on Intake by Workers for Various Radionuclides	431
Appendix	439
1.	Fundamental Constants	441
2.	Energy Conversion Factors	442
3.	Particle Properties	443
4.	Numerical Constants and Exponential Functions	444
5.	Statistical Relations for Ordinary Experiments Using Radionuclides	445
6.	Formulas	446
7.	Units and Specific Terminology on Radioactivity and Radiation	449
