

CONTENTS

Chapter 1

THE NUCLEAR THREE-BODY PROBLEM

A. N. Mitra

1. Introduction and Summary	1
2. Separable Potentials	8
2.1 Central Potentials	9
2.2 Realistic (Including Noncentral) Potentials	13
2.3 Effective Two-Body Potentials for Other Systems	15
3. Model Three-Body Problem	16
3.1 The Spectator Function	18
3.2 Connection with Faddeév Theory	21
4. Model Stripping Problem	25
4.1 Exact Amplitudes	26
4.2 DWBA Amplitudes	29
5. The Three-Nucleon Formalism	30
5.1 Choice of Input Potential	31
5.2 Symmetry Classification of the Wave Function	32
5.3 Equation for the Quartet State	38
5.4 Equations for the Doublet States	39
5.5 The Bound State Function	41
5.6 Electromagnetic Form Factors	43
6. Numerical Results for $3N$ System	45
6.1 Binding Energy (BE) and Doublet Scattering Length ($a_{1/2}$)	46
6.2 Relativistic Corrections	50
6.3 Coulomb Energy	51
6.4 Electromagnetic Form Factors and Probabilities of Orbital States	52
6.5 Other Results on $3N$ Systems	54
7. Other Three-Body Systems: Unequal Masses	56
7.1 Λ H^3 , Λ $-d$ and $K^\pm -d$ Systems	56
7.2 Approximate Three-Body Systems	57
8. Conclusion	58

Acknowledgments	61
Appendix	62
References	65

Chapter 2

THE INTERACTION OF PIONS WITH NUCLEI

Daniel S. Koltun

1. Introduction	71
2. Interaction of Pions with Nucleons	73
2.1 π - N Scattering	73
2.2 Pion-Nucleon Interactions	80
3. Survey of Theoretical Tools	82
3.1 Single Scattering Approximations	83
3.2 Multiple Scattering	90
3.3 Optical Models	95
4. Pion-Deuteron Scattering	99
4.1 Impulse Theories	100
4.2 Multiple Scattering Corrections	104
5. Pionic Atoms	107
5.1 Level Shifts and Widths	107
5.2 Theories of the Scattering Lengths	111
6. Elastic Scattering	116
6.1 Impulse Approximation	117
6.2 Phenomenological Optical Models	121
6.3 Derived Optical Model	123
7. Inelastic Scattering	127
7.1 Total and Inelastic Cross Sections	127
7.2 Low Excited States	132
7.3 (π , πX) Reactions	134
7.4 Charge Exchange Reactions	140
8. Nuclear Absorption of Pions	147
8.1 Experimental	147
8.2 $\pi + 2N \longleftrightarrow 2N$	160
8.3 Theoretical	168
9. Conclusions	180
Acknowledgments	182
References	182

Chapter 3

COMPLEX SPECTROSCOPY

**J. B. French, C. E. Halbert,
J. B. McGrory, and S. S. M. Wong**

1. Introduction	193
2. Notation and Formalism	195
2.1 The Use of Spherical Tensors	195
2.2 Second Quantization	201
3. Structure of the Hamiltonian Matrix	213
3.1 Multishell Matrix Elements	213
3.2 The Neutron-Proton ($n-p$) Formalism	219
3.3 The Center-of-Mass Spurious-State Problem	221
3.4 A Classical Correspondence to the Multishell Problem	223
4. The Multishell Programs	226
4.1 The Hamiltonian Program	226
4.2 Nuclear Moments and Transition Rates	233
5. Methods for Checking Spectroscopic Calculations	237
5.1 Checks for Hamiltonian Matrices and Eigenvalues	237
5.2 Checks for other Quantities	247
5.3 Further Checking Methods	248
6. Final Remarks	249
6.1 Applications of the Present System	249
6.2 Future Extensions	254
Acknowledgments	256
References	256

Chapter 4

SINGLE NUCLEON TRANSFER IN DEFORMED NUCLEI

Bent Elbek and Per Olav Tjøm

1. Introduction	259
2. Survey of Single Nucleon Transfer Reactions	261
3. Single Nucleon Excitations in Deformed Nuclei	276
4. Transfer Reactions in Deformed Nuclei	290
5. Experimental Methods	294
6. Survey of Important Spectroscopic Results	298
7. Coupling Phenomena	309
8. Conclusions	320

Acknowledgments	321
References	322

Chapter 5

ISOSCALAR TRANSITION RATES IN NUCLEI FROM THE (α , α') REACTION Aron M. Bernstein

1. Introduction	325
1.1 Abstract	325
1.2 Philosophy and Description of Article	330
1.3 History	332
2. Elastic Scattering	336
2.1 Diffraction Model	336
2.2 Energy Dependence	338
2.3 Comparison with Other Projectiles—Experimental Criterion for Strong Absorption	339
2.4 Optical Model	343
2.5 Spatial Dependence of Scattering	344
3. (α , α') Differential Cross Section	347
3.1 Diffraction Model	347
3.2 Distorted-Wave Born Approximation	352
3.3 Spin and Parity Assignments	355
3.4 Spatial Dependence of (α , α') Reactions	359
3.5 Q and l Dependence of the Magnitude of (α , α') Cross Sections	366
3.6 Multiple Step Transitions	367
3.7 Shapes of Deformed Nuclei	374
4. Microscopic Treatment of the DWBA Theory	379
4.1 Effective Interaction and the Optical Potential	379
4.2 Microscopic Models	385
4.3 Effective Isoscalar Transition Operator for Inelastic Scattering	395
4.4 Isoscalar and Electromagnetic Transition Rates	399
4.5 Isoscalar Transition Rates from (α , α') Experiment	404
5. Isoscalar and Electromagnetic Transition Rates in Nuclei	409
5.1 Determination of Isoscalar Transition Rates from Experiment	409
5.2 Comparison of IS and EM Transition Rates	416
5.3 Comparison of Inelastic Scattering Experiments	424
5.4 Systematics of 3- States	429
5.5 Systematics of Highly Excited 4+ States	450
5.6 Systematics of 5- States	454
5.7 Sum Rules	455

6. Conclusions	459
Acknowledgments	461
Appendix—Tables to Calculate Transition Rates and Sum Rules Using a Fermi Distribution	462
A.1 Table XII. Parameters of the Fermi Distribution	462
A.2 Tables XII–XVI	463
A.3 Numerical Example	471
A.4 Table XVII (For O^{16})	472
References	472
INDEX	477
