## *Chapter 1*

### **NUCLEON–NUCLEUS COLLISIONS AND INTERMEDIATE STRUCTURE**

**Aram Mekjian**

1. Introduction . . . . .	1
2. A Simple Model of a Resonance Process . . . . .	3
2.1. The Model and Its Stationary State Solutions . . . . .	3
2.2. Time-Dependent Picture . . . . .	6
2.3. Applications of the Simple Model. . . . .	7
2.4. Mixing Times in Nuclear Excitations . . . . .	12
3. Nucleon–Nucleus Scattering and Intermediate Structure . . . . .	17
3.1. Review of the Models of Nuclear Resonance Reactions .	17
3.2. Physical Picture of Nucleon–Nucleus Scattering. . . . .	27
3.3. The Optical-Model Strength Function as a Function of Mass Number . . . . .	31
3.4. Shell-Model Investigations of Doorway States . . . . .	35
3.5. Vibrations as Doorway States . . . . .	40
3.6. Doorway States and Isobaric Analog Resonances. . . . .	43
3.7. Electromagnetic Interactions and Intermediate Structure. .	51
3.8. Intermediate Structure in Fission . . . . .	57
3.9. Doorway States and Partial Width Correlations . . . . .	61
3.10. Intermediate Structure and the High-Energy Neutron Tail in Neutron Evaporation Spectra . . . . .	64
3.11. Intermediate Structure and Statistical Fluctuations . . . .	68
3.12. Experimental Observations of Intermediate Structure in Total Neutron Cross Sections. . . . .	73

4.	Theoretical Framework for Intermediate Resonances . . . . .	77
4.1.	Shell-Model Theory of Nuclear Reactions . . . . .	77
4.2.	Theory of Average Cross Sections . . . . .	85
5.	Summary . . . . .	89
	References . . . . .	90

## *Chapter 2*

### **COULOMB MIXING EFFECTS IN NUCLEI: A SURVEY BASED ON SUM RULES**

**A. M. Lane and A. Z. Mekjian**

Abstract . . . . .	97
1. Introduction . . . . .	98
2. Sum-Rule Approach to Coulomb Mixing . . . . .	101
3. Evaluation of Sum-Rule Quantities for Separate Isospins . . .	104
3.1. Oscillator Shell Model . . . . .	106
3.2. Shell Model with Correlations . . . . .	106
3.3. Specification of $\bar{E}(T')$ . . . . .	107
3.4. Specification of $N(T')$ . . . . .	109
4. Total Isospin Impurities of States . . . . .	110
4.1. Parent States . . . . .	110
4.2. Analog States . . . . .	112
5. Superallowed Fermi Transitions . . . . .	113
6. Isobaric Mass Formula . . . . .	115
6.1. First-Order Energy . . . . .	116
6.2. Second-Order Energy . . . . .	117
6.3. Correlated Model . . . . .	119
6.4. Configuration States . . . . .	121
6.5. Observed Values . . . . .	122
7. Analog States: General Remarks and Lowest-Order Effects . .	123
7.1. $\delta E_c$ in Terms of Relative Coulomb Potential and Exact Parent State . . . . .	123
7.2. $\delta E_c$ in Terms of Coulomb Energy and Unperturbed Parent State . . . . .	125
7.3. First-Order Shift $\Delta_1$ and Pseudo-First-Order Shift $\Delta_1'$ . .	126

8.	Analog States: Second-Order Shifts and Width . . . . .	130
8.1.	Estimate of $\delta E_c - \Delta_1' = -[\Delta(-+) + \Delta(+-)]$ . . . . .	130
8.2.	Estimate of $(\Delta_{2a} - \Delta_{2p})$ . . . . .	133
8.3.	Comparison of $\Delta_1$ and $\Delta_1'$ . . . . .	135
8.4.	Implications for the Nolen-Schiffer Anomaly . . . . .	135
8.5.	Spreading Width . . . . .	137
9.	Second-Order Effects in Model Calculations . . . . .	138
9.1.	Coulomb Shift of Single-Particle States . . . . .	139
9.2.	Model Analog . . . . .	140
9.3.	Analysis of Shift Calculated from the Model . . . . .	142
9.4.	Analysis of Spreading Width Calculated from the Model	143
10.	Conclusions . . . . .	145
	Acknowledgment . . . . .	146
Appendix 1	Corrections from More Accurate Treatment of the Coulomb Potential . . . . .	146
Appendix 2	Explicit Treatment of Effect of Correlations on Second-Order Coulomb Mixing . . . . .	152
Appendix 3	Shell-Model Sum Rules for the One- and Two-Body Coulomb Forces . . . . .	153
Appendix 4	Coulomb Mixing Properties of Oscillator Orbitals . . . . .	155
References	. . . . .	156

*Chapter 3*

## THE BETA STRENGTH FUNCTION

### P. G. Hansen

1.	Introduction . . . . .	159
2.	Beta-Transition Rates between Individual Nuclear Levels . . . . .	162
2.1.	The Fermi Transitions . . . . .	165
2.2.	The Gamow-Teller Transitions . . . . .	168
2.3.	Forbidden Transitions . . . . .	171

3.	Expected Properties of the Beta Strength Function . . . . .	172
3.1.	The Shell Model and Effects of Pairing . . . . .	173
3.2.	The Correlations . . . . .	176
3.3.	Fluctuations . . . . .	180
4.	Experimental Results on Beta Strength . . . . .	183
4.1.	Nuclear Level Schemes . . . . .	185
4.2.	Total Absorption Spectrometry . . . . .	188
4.3.	The Systematics of Beta Halflives . . . . .	195
4.4.	Beta-Delayed Particle Emission . . . . .	202
4.5.	Muon-Capture and Electromagnetic Transitions . . . . .	213
5.	Concluding Remarks . . . . .	219
	Acknowledgments . . . . .	220
	References . . . . .	221

## *Chapter 4*

### **GAMMA-RAY STRENGTH FUNCTIONS**

**G. A. Bartholomew, E. D. Earle, A. J. Ferguson,  
J. W. Knowles, and M. A. Lone**

1.	Introduction . . . . .	229
2.	Theoretical Background . . . . .	235
2.1.	Nomenclature . . . . .	235
2.2.	Strength Functions . . . . .	237
2.3.	Spectral Distributions . . . . .	241
3.	Experimental Methods . . . . .	244
3.1.	Photoexcitation Method . . . . .	244
3.2.	Spectrum Fitting Method . . . . .	253
3.3.	Sequential Extraction Method . . . . .	259
3.4.	High-Resolution Gamma-Ray Method . . . . .	262
3.5.	Comparison of Methods . . . . .	268
4.	Properties of Gamma-Ray Strength Functions . . . . .	271
4.1.	General Properties . . . . .	272
4.2.	Detailed Properties . . . . .	289
5.	Discussion . . . . .	311
5.1.	General . . . . .	311

5.2. Compatibility of Strength Functions . . . . .	312
5.3. $E_1$ Strength Function . . . . .	313
5.4. $M_1$ Strength Function . . . . .	316
6. Conclusion . . . . .	317
Acknowledgments . . . . .	317
References . . . . .	318
