Chapter 1

PHENOMENA IN FAST ROTATING HEAVY NUCLEI

R. M. Lieder and H. Ryde

1. Introduction	1
2. Nuclear Structure at Large Angular Momenta	2
3. Region of High-Spin States ($I \leq 22$)	6
3.1. Study of Ground-State Bands of Even-Mass Nuclei	6
3.2. The Backbending Effect in Deformed Even-Mass Nuclei	10
3.3. Band Crossing in Even-Mass Nuclei	21
3.4. Properties of High-Spin States in Even-Mass Nuclei . .	25
3.5. Theory of Rotational Nuclei	37
3.6. Strongly Coupled Bands in Odd-Mass Nuclei and Their Perturbation by Coriolis Effects	57
3.7. Rotation-Aligned Bands in Odd-Mass Nuclei	59
3.8. The Backbending Effect in Odd-Mass Nuclei	76
3.9. Two-Quasiparticle-Aligned Bands in Even-Mass Nuclei .	87
4. Region of Very-High-Spin States ($I > 22$)	97
4.1. Compound-Nucleus Reactions	98
4.2. Multiplicity of the γ -Rays in Heavy-Ion Reactions . .	104
4.3. Energy and Angular Distributions of the γ -Rays in Heavy-Ion Reactions	111
5. Summary	115
Acknowledgment	116
References	117

*Chapter 2***VALENCE AND DOORWAY MECHANISMS
IN RESONANCE NEUTRON CAPTURE****B. J. Allen and A. R. de L. Musgrove**

1. Introduction	129
2. Statistical Theory	133
3. Nonresonant Capture	135
4. The Valence Model	139
5. Valence Transitions	142
5.1. Calculations	142
5.2. Energy Dependence of Valence Transitions	145
5.3. Average Valence Widths	148
5.4. Excited Target States	154
5.5. Exemption from the Giant Dipole Resonance	155
6. Initial and Final State Correlations	156
6.1. Measurements	156
6.2. Systematics	166
6.3. 3s Region	167
6.4. 3p Region	169
6.5. 4s Region	172
6.6. Transuranium Region	173
7. Doorway States and Correlations	174
8. Intrinsic E1 Strength of Neutron and γ -Ray Doorway States . .	179
8.1. Particle-Vibrator Doorways	180
8.2. Collective Core Transitions	183
8.3. 2p-1h States	183
8.4. Valence Doorways	186
9. Conclusions	187
Acknowledgment	188
References	188

*Chapter 3***LIFETIME MEASUREMENTS OF EXCITED NUCLEAR
LEVELS BY DOPPLER-SHIFT METHODS****T. K. Alexander and J. S. Forster**

1. Introduction	197
1.1. Introductory Remarks	197
1.2. Formulas and Units	199
1.3. Doppler-Shift and Solid-Angle Effects	202
1.4. Kinematic Broadening Effects in Doppler-Shift Experiments	208
1.5. Stopping Powers and Scattering	210
1.6. Hyperfine Interactions and Perturbed Angular Correlations	224
1.7. Ge(Li) γ -Ray Spectrometers	230
2. The Recoil Distance Method	233
2.1. Description of the Plunger Method	233
2.2. Apparatus	241
2.3. The Gas-Target Recoil Distance Method	246
2.4. Complex Decay Functions	247
2.5. Applications of the Plunger Method	250
3. The Doppler-Shift Attenuation Method (DSAM)	258
3.1. Description of the Method	258
3.2. Target and Stopping Materials	268
3.3. Feeding from Higher Levels	271
3.4. Error Analysis	272
3.5. Tests of the Accuracy of DSAM	277
3.6. Applications of DSAM	279
4. Complementary Techniques	288
4.1. Established Methods	289
4.2. Specialized Methods	297
5. Concluding Remarks	307
5.1. Comparison of Methods	307
5.2. Remarks on the Doppler-Shift Methods	319
Acknowledgments	321
References	321
Index	333
