## *Chapter 1*

### **HYPERNETTED-CHAIN THEORY OF MATTER AT ZERO TEMPERATURE**

**J. G. Zabolitzky**

1.	Introduction . . . . .	1
2.	Hypernetted-Chain Expansion for Bosons . . . . .	5
2.1.	Two-Body Correlation Factors . . . . .	5
2.2.	Exact Form of the Wave Function . . . . .	13
3.	Fermi-Hypernetted-Chain and Other Extensions . . . . .	14
3.1.	The Wave Function . . . . .	14
3.2.	Permutation Expansion Method . . . . .	15
3.3.	Fermi Cancellation Phenomenon . . . . .	19
3.4.	Effective Correlation Factor Method . . . . .	23
3.5.	Three-Body Distribution Functions . . . . .	27
4.	Energy Expectation Value . . . . .	29
4.1.	Energy Functionals and the Accuracy of HNC . . . . .	29
4.2.	Minimization of the Energy: Euler-Lagrange Equations .	33
4.3.	Model Energies . . . . .	37
5.	Results . . . . .	39
5.1.	Liquid $^4\text{He}$ . . . . .	39
5.2.	Bose Homework Problem . . . . .	42
5.3.	Charged Bose Liquid . . . . .	44
5.4.	Liquid $^3\text{He}$ . . . . .	45
5.5.	Model Neutron Matter . . . . .	47
5.6.	Model Nuclear Matter . . . . .	51
5.7.	Electron Gas . . . . .	52
6.	Further Developments . . . . .	53
6.1.	Noncentral Interactions . . . . .	53

6.2. State-Dependent Correlations . . . . .	56
6.3. Solids . . . . .	57
6.4. Summary . . . . .	58
Acknowledgments . . . . .	58
References . . . . .	58

## *Chapter 2*

# **NUCLEAR TRANSITION DENSITY DETERMINATIONS FROM INELASTIC ELECTRON SCATTERING**

**Jochen Heisenberg**

1. Introduction . . . . .	61
2. Electron Scattering Cross Section . . . . .	64
2.1. Born Approximation . . . . .	64
2.2. Distorted-Wave Born Approximation . . . . .	68
2.3. Higher-Order Dispersion Corrections . . . . .	72
3. Density Representation . . . . .	73
3.1. Irrotational Flow . . . . .	74
3.2. Fourier-Bessel Parametrization of Densities . . . . .	75
3.3. High- $q$ Assumptions . . . . .	81
3.4. Tail Bias as Restriction in Coordinate Space . . . . .	82
3.5. Determination of Errors . . . . .	84
4. Examples for Fourier-Bessel Fit . . . . .	85
4.1. Collective States in $^{208}\text{Pb}$ . . . . .	85
4.2. $2^+$ States in the Ni and Zn Isotopes . . . . .	95
4.3. Rotational Band in $^{174}\text{Yb}$ . . . . .	102
5. Shapes in Coordinate Space . . . . .	106
5.1. Vibrational Model . . . . .	108
5.2. Single-Particle Model . . . . .	110
5.3. Rotational Model . . . . .	122
6. Conclusion . . . . .	130
Acknowledgments . . . . .	130
References . . . . .	131

*Chapter 3***HIGH-ENERGY PROTON SCATTERING****Stephen J. Wallace**

1. Introduction . . . . .	135
2. Multiple Scattering Theory . . . . .	138
2.1. Isobar Production in Nucleon–Nucleon Scattering . . . . .	139
2.2. Theory of Multiple Scattering with Isobar Production . . . . .	140
2.3. Optical Potential . . . . .	150
2.4. Summary of Formal Considerations . . . . .	152
3. Reactive Content . . . . .	153
3.1. $NN$ Reactive Content . . . . .	153
3.2. Nucleon–Nucleus Reactive Content . . . . .	159
4. Role of Free Nucleon–Nucleon Amplitudes . . . . .	161
4.1. Quasifree Scattering . . . . .	161
4.2. Quasifree Kinematics . . . . .	164
4.3. Breit Frame Kinematics . . . . .	172
4.4. Summary of Kinematic Considerations . . . . .	173
5. High-Energy Approximations . . . . .	174
5.1. Glauber Approximation . . . . .	174
5.2. High-Energy Expansion . . . . .	175
5.3. Eikonal Approximation for Noncommuting Interactions . . . . .	179
5.4. Fresnel and Noneikonal Approximations . . . . .	181
5.5. Intermediate Isobar Contributions . . . . .	184
6. Nucleon–Nucleon Amplitudes at Intermediate Energy . . . . .	189
6.1. Nucleon–Nucleon c.m. Frame Amplitudes from Phase Shifts	189
6.2. Nucleon–Nucleon Breit Frame Amplitudes . . . . .	200
6.3. Survey of Amplitudes Used in Proton–Nucleus Analyses .	206
6.4. Isobar Production Amplitudes . . . . .	210
7. Analyses of Proton–Nucleus Data . . . . .	213
7.1. Heavy Nuclei . . . . .	213
7.2. Intermediate Isobars . . . . .	220
7.3. Light Ions . . . . .	224
8. Conclusions . . . . .	233
Appendix . . . . .	234
References . . . . .	242
