Chapter 1

CHIRAL SYMMETRY AND THE BAG MODEL: A NEW STARTING POINT FOR NUCLEAR PHYSICS

A. W. Thomas

1.	Introduction	1
2.	The Basic Bag Model	4
2.1.	The MIT Bag Model	4
2.2.	The Spectroscopy of Low-Lying States	13
2.3.	Attempts to Derive a Bag Model	21
2.4.	Relationship to Nonrelativistic Quark Models	26
3.	Hadronic Properties in the MIT Bag Model	27
3.1.	Charge Radii	28
3.2.	Magnetic Moments	29
3.3.	The Axial Current	31
3.4.	Center of Mass Corrections	34
4.	Chiral Symmetry	37
4.1.	Lagrangian Formulation of the MIT Bag Model	38
4.2.	Conserved Currents in Lagrangian Field Theory	39
4.3.	The Axial Current	42
4.4.	The σ -Model and Spontaneous Symmetry Breaking	45
5.	Bag Models with Chiral Symmetry	51
5.1.	Motivation	52
5.2.	Chodos and Thorn	55
5.3.	Further Developments	58
5.4.	The Cloudy Bag Model	67
6.	Applications of the Cloudy Bag Model	75
6.1.	A Hamiltonian for Low- and Medium-Energy Physics	75

6.2. The Nucleon	82
6.3. Pion–Nucleon Scattering	96
6.4. Magnetic Moments of the Nucleon Octet	102
6.5. Summary	104
7. Towards a New View of Nuclear Physics	104
7.1. The Nucleon–Nucleon Force	106
7.2. Symmetry Breaking as a Clue	116
7.3. The Nuclear Many-Body Problem	120
8. Conclusion	125
Acknowledgements	126
Appendix I	127
References	129

Chapter 2

THE INTERACTING BOSON MODEL

A. Arima and F. Iachello

1. Introduction	139
2. The Interacting Boson Model-1	140
2.1. The Model	140
2.2. Analytic Solutions	146
2.3. Transitional Classes	155
2.4. Extensions of the Model	162
3. Geometric Properties of the Interacting Boson Model-1	165
3.1. Coherent States	165
3.2. Transitional Classes and Shape-Phase Transitions	169
4. The Interacting Boson Model-2	173
4.1. The Model	173
4.2. Energy Levels	175
4.3. Electromagnetic Transition Rates	179
4.4. Other Properties	182
4.5. Extensions of the Model	185
5. Microscopic Description of Interacting Bosons	187
5.1. Generalized Seniority	187
5.2. The Single j -Shell	190

5.3. Several j -Shells	194
5.4. The Ginocchio Model	195
6. Conclusions	197
Acknowledgements	198
References	198

*Chapter 3***HIGH-ENERGY NUCLEAR COLLISIONS****S. Nagamiya and M. Gyulassy**

1. Introduction	201
1.1. Motivation	201
1.2. High-Energy Heavy-Ion Accelerators in the World	204
1.3. The High-Density-Temperature Nuclear Domain	206
1.4. The Experimental View	208
2. Theoretical Tools	213
2.1. Quantal and Classical Aspects	213
2.2. Classical Tools	217
2.3. Statistical Models	220
2.4. Hydrodynamics	226
2.5. Intranuclear Cascade	231
2.6. Nonequilibrium Quantum Scattering	237
3. Elements of the Reaction Mechanism	239
3.1. Collision Geometry	239
3.2. Evidence for Multiple Collisions	242
3.3. Inclusive Proton Spectra	244
3.4. Composite Formation	246
3.5. Pion Production	250
3.6. Strange-Particle Production	264
3.7. Coulomb Final-State Interactions	267
3.8. Forward and Backward Spectra	269
3.9. Spectator Physics	273
4. Toward the Physics of Dense Nuclear Matter	278
4.1. Do Nuclei Flow?	278
4.2. Entropy Puzzle	288
4.3. Novel States of Nuclei	290

5. Summary and Outlook	295
Acknowledgments	298
Appendix: Definition of Common Variables	299
References	301
<i>Index</i>	317
