

CONTENTS

THE RELATIVISTIC NUCLEAR MANY-BODY PROBLEM

Brian D. Serot and John Dirk Walecka

1.	Introduction	1
1.1.	Historical Perspective	12
2.	Relativistic Baryons	15
2.1.	The Dirac Equation	16
2.2.	Free-Particle Solutions	19
2.3.	Dirac Hole Theory	21
2.4.	Classical Field Theory and Canonical Quantization	23
2.5.	Dirac Fields and the Baryon Propagator	28
2.6.	Lorentz Covariance of the Dirac Equation	32
2.7.	Isospin	35
3.	A Simple Model	35
3.1.	Field Equations in a Scalar–Vector Theory	35
3.2.	The Mean-Field Theory (MFT)	38
3.3.	Model Hamiltonian	41
3.4.	The Nuclear Matter Equation of State	44
3.5.	Nuclear Matter at Finite Temperature	51
3.6.	Nuclear Hydrodynamics	55
3.7.	Spatially Nonuniform Systems	61
3.8.	Collective Excitations of Finite Systems	68
3.9.	The Nucleon–Nucleus Optical Potential	73
4.	Relativistic Hartree Description of Nuclei	77
4.1.	Relativistic Hartree Formalism	78
4.2.	Properties of Finite Nuclei	84

4.3.	Discussion	94
4.4.	Nucleon–Nucleus Scattering	97
5.	Quantum Hadrodynamics (QHD)	105
5.1.	Feynman Rules	106
5.2.	Observables	109
5.3.	Mean-Field Theory (MFT)	110
5.4.	Vacuum Fluctuation Corrections	116
5.5.	Relativistic Hartree–Fock	126
5.6.	Collective Modes and Zero Sound	139
5.7.	Relativistic Hartree Theory of Finite Nuclei	142
6.	The Dynamical Quantum Vacuum	145
6.1.	Bosons	146
6.2.	Fermions	150
6.3.	The Effective Action	153
6.4.	Effective Action with Fermions	161
6.5.	QHD-I and Relativistic Hartree Theory	166
6.6.	The Quantum Vacuum in Finite Nuclei	172
7.	Charged Mesons	176
7.1.	Noether’s Theorem	176
7.2.	$SU(2)$ Symmetry	177
7.3.	Pion–Nucleon Interactions	179
7.4.	Rho–Nucleon Interactions	180
7.5.	Non-Abelian Gauge Theories	182
7.6.	The Feynman Rules in QHD-II	186
7.7.	Applications	189
7.8.	Electromagnetic Interactions	194
8.	Relativistic Pion Dynamics	197
8.1.	A Minimal Model	197
8.2.	Dirac–Hartree–Fock with Pions	201
8.3.	A Renormalizable Model with Pseudovector Coupling	206
8.4.	Dirac–Hartree–Fock Revisited	210
8.5.	The Pion Propagator in Nuclear Matter	215
8.6.	Chiral Symmetry	228
9.	Two-Nucleon Correlations	238
9.1.	Nuclear Matter Formalism	238
9.2.	Relation to Nucleon–Nucleon Scattering	246
9.3.	Nuclear Matter Results	247
10.	Electroweak Interactions with Nuclei	252
10.1.	The Role of Charged Mesons	252

10.2. Electromagnetic Interactions in QHD-II	256
10.3. Weak Currents	268
11. Quantum Chromodynamics (QCD)	270
11.1. Quarks and Color	270
11.2. The Theory of QCD	272
11.3. The Relationship between QHD and QCD	279
11.4. A Model of the Phase Diagram for Nuclear Matter	281
12. Summary	289
<i>Appendix A:</i> Notation and Conventions	291
<i>Appendix B:</i> Dimensional Regularization	294
<i>Appendix C:</i> Path-Integral Derivation of Feynman Rules	296
<i>Appendix D:</i> The Feynman Rules in Local Gauge Theories	299
D.1. Quantum Electrodynamics (QED)	299
D.2. The Non-Abelian Theory QHD-II	304
References	311
