## *Chapter 1*

### **P-MATRIX METHODS IN HADRONIC SCATTERING**

**B. L. G. Bakker and P. J. Mulders**

|       |  |    |
|-------|--|----|
| 1.    | Introduction . . . . .   | 1  |
| 2.    | Formalism . . . . .  | 5  |
| 2.1.  | Definitions . . . . .  | 5  |
| 2.2.  | Boundary Condition Matrices . . . . .  | 7  |
| 2.3.  | The $P$ Matrix and Internal Solutions . . . . .                                    | 9  |
| 2.4.  | Relations between $P$ Matrix and Other Scattering<br>Matrices ( $S, K$ ) . . . . . | 10 |
| 2.5.  | Explicit Formulas for One- and Two-Channel Problems .                              | 12 |
| 2.6.  | The Reduced $P$ Matrix . . . . .   | 15 |
| 2.7.  | Peripheral Interactions . . . . .  | 15 |
| 2.8.  | The Square Well: A Simple Example . . . . .  | 17 |
| 2.9.  | Analytical Properties of the $P$ Matrix . . . . .                                  | 19 |
| 2.10. | Dependence on the Boundary; Factorization of the<br>Residue of Poles . . . . .     | 21 |
| 3.    | $P$ -Matrix Methods in Phenomenology . . . . .                                     | 22 |
| 3.1.  | Introduction . . . . .   | 22 |
| 3.2.  | The $P$ Matrix and Multiquark States . . . . .                                     | 23 |
| 3.3.  | Hadronic Shifts . . . . .  | 36 |
| 4.    | $P$ -Matrix Methods in Models . . . . .  | 37 |
| 4.1.  | Boundary Condition Models . . . . .  | 37 |
| 4.2.  | The Quark Compound Bag Model . . . . .   | 38 |
| 4.3.  | Six-Quark Admixtures in the Two-Baryon System . . .                                | 39 |

|  |    |
|--|----|
| 5. Summary . . . . .   | 40 |
| Appendix: Single-Channel Expressions for $P_l$ for Arbitrary $l$ . . . . . | 40 |
| References . . . . .   | 42 |

## *Chapter 2*

### DIBARYON RESONANCES

M. P. Locher, M. E. Sainio, and A. Švarc

|   |     |
|---|-----|
| 1. Introduction . . . . .                                   | 47  |
| 1.1. Color Group Considerations . . . . .                   | 49  |
| 1.2. Bag Model States . . . . .                             | 51  |
| 1.3. $P$ -Matrix Formalism . . . . .                        | 55  |
| 1.4. Experimental Signals for $B = 2$ States . . . . .      | 57  |
| 2. Dibaryons and the Nucleon–Nucleon Interaction . . . . .  | 59  |
| 2.1. Experimental Evidence from $NN$ Scattering . . . . .   | 60  |
| 2.2. Data Analysis . . . . .                                | 68  |
| 2.3. Theoretical Considerations . . . . .                   | 77  |
| 2.4. Dibaryons in Reactions Involving Nuclei . . . . .      | 80  |
| 3. Dibaryons with Strangeness . . . . .                     | 81  |
| 3.1. $S = -2$ States . . . . .                              | 82  |
| 3.2. $S = -1$ States . . . . .                              | 87  |
| 4. Pionic Channels . . . . .                                | 90  |
| 4.1. The Reaction $\pi d\rightarrow\pi d$ . . . . .         | 91  |
| 4.2. $pp\leftrightarrow\pi d$ . . . . .                     | 103 |
| 4.3. Further Remarks on Dibaryon Signals in Pionic Channels | 109 |
| 4.4. Amplitude Reconstruction . . . . .                     | 112 |
| 4.5. Three-Body Final States . . . . .                      | 116 |
| 5. Electromagnetic Channels . . . . .                       | 119 |
| 5.1. $\gamma d\rightarrow pn$ . . . . .                     | 120 |
| 5.2. $\gamma d\rightarrow\pi NN$ . . . . .                  | 122 |
| 6. Concluding Remarks . . . . .                             | 124 |
| Appendix A . . . . .  | 124 |
| Appendix B . . . . .  | 126 |
| Appendix C . . . . .  | 127 |
| References . . . . .  | 129 |

*Chapter 3***SKYRMIONS IN NUCLEAR PHYSICS****Ulf-G. Meissner and Ismail Zahed**

|   |     |
|---|-----|
| 1. Introduction . . . . .                                   | 143 |
| 2. The Large- $N_C$ World . . . . .                         | 146 |
| 3. Phenomenological Aspects of Chiral Symmetry . . . . .    | 149 |
| 4. The Nonlinear $\sigma$ Model . . . . .                   | 150 |
| 5. The Soliton Sector . . . . .                             | 152 |
| 6. The Skyrme Model . . . . .                               | 154 |
| 7. The Wess–Zumino Term . . . . .                           | 159 |
| 7.1. Witten’s Construction . . . . .                        | 159 |
| 7.2. Topological Quantization . . . . .                     | 163 |
| 7.3. Anomalous Baryon Current . . . . .                     | 164 |
| 7.4. Spin Statistics of Skyrmions . . . . .                 | 166 |
| 8. Nucleon and $\Delta$ Isobar from Skyrmions . . . . .     | 167 |
| 8.1. Hedgehog Symmetries . . . . .                          | 167 |
| 8.2. Canonical Quantization of the Spinning Modes . . . . . | 168 |
| 8.3. Static Properties of the Nucleon . . . . .             | 171 |
| 9. The Baryon Spectrum . . . . .                            | 175 |
| 9.1. The Roper Resonance . . . . .                          | 175 |
| 9.2. Rotational–Vibrational Coupling . . . . .              | 177 |
| 9.3. $\pi N$ Spectrum . . . . .                             | 180 |
| 10. The Skyrme Model in the Soft-Pion Limit . . . . .       | 184 |
| 10.1. Soft-Pion Theorems . . . . .                          | 184 |
| 10.2. Soft-Pion Corrections to the Masses . . . . .         | 186 |
| 11. The Skyrmion–Skyrmion Interaction . . . . .             | 188 |
| 11.1. Derivation of the $NN$ Potential . . . . .            | 189 |
| 11.2. Asymptotic Form of the $NN$ Potential . . . . .       | 191 |
| 11.3. Numerical Results . . . . .                           | 192 |
| 11.4. The Three-Skyrmion Potential . . . . .                | 195 |
| 11.5. The Current Debate . . . . .                          | 196 |
| 11.6. Relevance to Boson Exchange Models . . . . .          | 198 |
| 12. The Deuteron . . . . .                                  | 199 |
| 13. The Many-Skyrmion Problem . . . . .                     | 203 |

|   |     |
|---|-----|
| 13.1. Skyrmions in Boxes . . . . .  | 203 |
| 13.2. Skyrmion Crystal . . . . .  | 206 |
| 13.3. Periodic Skyrmions . . . . .  | 207 |
| 14. Prospects and Conclusions . . . . .   | 210 |
| Appendix A: The PCAC Relation in QCD . . . . .                                      | 213 |
| Appendix B: The Skyrme Term from Massive $\varrho$ -Meson Exchange .                | 215 |
| Appendix C: Asymptotic Form of the Pion around the Nucleon .                        | 217 |
| Appendix D: Evaluation of the Wess-Zumino Term on Normalized<br>Manifolds . . . . . | 218 |
| References . . . . .  | 220 |

## *Chapter 4*

### MICROSCOPIC DESCRIPTION OF NUCLEUS-NUCLEUS COLLISIONS

Karlheinz Langanke and Harald Friedrich

|  |     |
|--|-----|
| 1. Introduction . . . . .  | 223 |
| 2. Theoretical Background . . . . .  | 226 |
| 2.1. Microscopic Formulation of the Equations of Motion . .                                      | 226 |
| 2.2. Generator Coordinate Method . . . . .   | 232 |
| 2.3. Transformation to an Orthogonal Representation . . .  | 234 |
| 2.4. The Role of the Pauli Principle . . . . .   | 237 |
| 2.5. Microscopically Derived Nucleus-Nucleus Potentials .  | 240 |
| 2.6. Effective Operators for the Collective Schrödinger Equation                                 | 245 |
| 3. Elastic Scattering . . . . .  | 248 |
| 3.1. Elastic $\alpha$ Scattering . . . . .   | 249 |
| 3.2. Heavier Systems . . . . .   | 258 |
| 3.3. Summary . . . . .   | 264 |
| 4. Microscopic Study of Astrophysically Important Electromagnetic<br>Capture Reactions . . . . . | 264 |
| 4.1. Formulation of a Microscopic Theory . . . . .   | 264 |
| 4.2. Formulation of the Microscopic Potential Model for<br>Capture Processes . . . . .           | 267 |
| 4.3. Applications of the Microscopic Potential Model . . . .                                     | 273 |
| 5. Inelastic Reactions . . . . .   | 313 |

|      |   |     |
|------|---|-----|
| 5.1. | The Phenomenological Double Resonance Mechanism . . . . .   | 314 |
| 5.2. | Microscopic Studies of Inelastic Heavy-Ion Reactions and<br>Their Aspects for the Band Crossing Model . . . . . | 317 |
| 5.3. | Microscopic Modifications of the Band Crossing Model . . . . .  | 324 |
| 5.4. | Microscopically Modified Band Crossing Interpretation of<br>Inelastic Heavy-Ion Reactions . . . . .             | 327 |
| 5.5. | Electromagnetic Transitions within Molecular Bands . . . . .  | 341 |
| 6.   | Conclusion . . . . .  | 352 |
|      | References . . . . .  | 354 |
|      | <b><i>Index</i></b> . . . . .   | 365 |
