

CONTENTS

Chapter 1

NUCLEON MODELS

Dan Olof Riska

1. Introduction	2
2. Chiral Symmetry	3
3. The Chiral Bag Model	5
4. Chiral Meson Theory	6
5. The Skyrme Model	8
6. The Skyrmion	10
7. Currents and Form Factors	12
8. The Skyrme Model and the Chiral Bag Model	15
9. Extensions of the Model	16
10. Explicit Vector Meson Fields	19
11. The Hyperons	22
12. The Hyperon Spectrum	26
13. The Hyperon Magnetic Moments	29
14. Exotics	30
15. The Limits of the Bound State Model	31
16. The End of the Nucleon Models	33

Chapter 2

ASPECTS OF ELECTROMAGNETIC NUCLEAR PHYSICS AND ELECTROWEAK INTERACTIONS

T. W. Donnelly

1. Introduction	37
2. Leptonic Tensor	40
2.1. Unpolarized Electron Scattering	41
2.2. Polarized Incident Electrons	41
2.3. Polarized Incident and Scattered Electrons	44
3. Hadronic Response Functions	47
3.1. Inclusive Electron Scattering	47
3.2. The Reaction $A(e, e')$: Leptonic Polarization Transfer	51
3.3. Exclusive-1 Electron Scattering, No Hadronic Polarizations	52
3.4. Exclusive- n Electron Scattering, No Hadronic Polarizations	56
3.5. General Coincidence Electron Scattering Including Hadronic Polarizations	57
3.6. Relationships Involving the Reactions $A(e, e'x)$ and $A(\gamma, x)$	63
4. The Plane-Wave Impulse Approximation	65
4.1. Introduction; General Kinematics of Exclusive-1 Electron Scattering	65
4.2. Specification of the Model	70
4.3. Half-Off-Shell Single-Nucleon Responses	74
4.4. The Unpolarized $CC1^{(0)}$ and $CC2^{(0)}$ Responses	75
4.5. Inclusive Scattering in the PWIA: y -Scaling	76
4.6. The Polarized $CC1^{(0)}$ and $CC2^{(0)}$ Responses	78
5. Parity-Violating Electron Scattering	81
5.1. Introduction	81
5.2. Elastic Scattering from 0^+ Nuclei	84
5.3. Elastic Scattering from the Proton	87
5.4. Parity-Violating Quasi-Elastic Scattering	91
5.5. Experimental Scenario	98

*Chapter 3***COLOR TRANSPARENCY AND CROSS-SECTION FLUCTUATIONS IN HADRONIC COLLISIONS****Gordon Baym**

1. Introduction	101
2. Positronium Passing through a Foil	102
3. Hadron–Nucleus Interactions	105
4. Cross-Section Fluctuations	106
5. Extracting Cross-Section Fluctuations from Experiment	108
5.1. Inelastic Shadowing in Hadron–Deuteron Scattering . . .	108
5.2. Diffractive Scattering	111
5.3. Model Cross-Section Distributions	114
6. Proton–Nucleus Collisions	116
7. Nucleus–Nucleus Collisions	118
References	120

*Chapter 4***MANY-BODY METHODS AT FINITE TEMPERATURE****D. Vautherin**

1. Nuclear Partition Functions	123
1.1. Introduction	123
1.2. Partition Functions in Astrophysics	125
1.3. Grand Canonical Formalism for Independent Nucleons .	127
1.4. Variational Method and Mean-Field Approximation . .	129
2. Thermodynamic Perturbation Theory	135

2.1. Dyson's Expansion	135
2.2. Diagrams	142
2.3. Thermal Green's Functions	145
2.4. The Random Phase Approximation (RPA)	147
2.5. The Time-Dependent Mean-Field Approximation and RPA	151
2.6. Linear Response Theory in Hot Nuclear Matter	154
 3. Giant Resonances in Hot Nuclei	157
3.1. Photoabsorption by Hot Nuclei	157
3.2. Sum Rules at Finite Temperature	160
3.3. Observation of Giant Resonances in Hot Nuclei	162
3.4. The Schematic Model at Finite Temperature	162
3.5. Numerical Solution of the Thermal RPA Equations	165
3.6. The Level Density Parameter in Excited Nuclei	167
 References	171

Chapter 5

NUCLEOSYNTHESIS IN THE BIG BANG AND IN STARS

K. Langanke and C. A. Barnes

1. Introduction	173
2. The Nuclear Physics Input	178
2.1. Rate Equations and Reaction Rates	178
2.2. Neutron-Induced Reactions	180
2.3. Nonresonant Charged-Particle Reactions	181
2.4. Resonant Reactions of Charged Particles	184
2.5. The General Case	186
2.6. Plasma Screening	187
2.7. Electron Screening in Laboratory Nuclear Reactions	189
3. Nucleosynthesis in the Big Bang	191
3.1. Gamow's Hypothesis	191
3.2. Nucleosynthesis in the Standard Big Bang Model	193
3.3. The Inhomogeneous Big Bang Model	198
3.4. Nucleosynthesis in Inhomogeneous Big Bang Models	201

Contents	xvii
4. The Sun	206
4.1. The Standard Solar Model	207
4.2. Hydrogen Burning	208
4.3. Solar Neutrinos	211
4.4. Nuclear Reactions Involved in Solar Hydrogen Burning	216
4.5. Matter-Induced Neutrino Oscillations and Other Proposed Solutions to the Solar Neutrino Problem	220
5. Nucleosynthesis in Massive Stars	229
5.1. Hydrostatic Burning Phases	230
5.2. Pre-Supernova Nucleosynthesis	240
5.3. The Core Collapse	245
5.4. Explosive Burning	251
6. Conclusion	257
