

# Contents

	Preface	ix
1	Introduction <i>W. David Arnett and James W. Truran</i>	1
2	Back to Square One in Nuclear Reaction Rates <i>William A. Fowler</i>	8
3	Status of Helium Burning of $^{12}\text{C}$ <i>C. Rolfs</i>	15
4	Precise Stellar Neutron Capture Rates: $s$ -Process Needs and Experimental Possibilities <i>F. Käppeler</i>	28
5	Primordial Nucleosynthesis: Looking Good! <i>Gary Steigman</i>	48
6	Galactic Chemical Evolution and Nucleocosmochronology: A Standard Model <i>Donald D. Clayton</i>	65
7	Cosmic Rays as a Possible Probe of the Composition of Interstellar Matter <i>M. E. Wiedenbeck</i>	89
8	Nucleosynthetic Interpretations of Isotopic Anomalies <i>David N. Schramm</i>	106
9	Late Stages of the Evolution of Massive Stars: Challenges <i>W. David Arnett</i>	122
10	Models of Type II Supernova Explosions <i>W. Hillebrandt and R. G. Wolff</i>	131

11	Hydrostatic Nucleosynthesis and Pre-Supernova Abundance Yields of Massive Stars <i>Friedrich-K. Thielemann and W. David Arnett</i>	151
12	Neutron Source Requirements for the Helium $r$ -Process <i>A. G. W. Cameron, J. J. Cowan, and J. W. Truran</i>	190
13	Explosive Nucleosynthesis in Carbon Deflagration Models for Type I Supernovae <i>Ken'ichi Nomoto</i>	202
14	Carbon Combustion Models of Type I Supernovae: The Propagation of the Thermonuclear Burning Front <i>Ewald Müller and W. David Arnett</i>	235
15	The Optical Spectrum of a Carbon-Deflagration Supernova <i>David Branch</i>	261
16	Nucleosynthesis in Low and Intermediate Mass Stars on the Asymptotic Giant Branch <i>Icko Iben, Jr.</i>	272
17	Nucleosynthesis in Novae <i>James W. Truran</i>	292
