

CONTENTS

<i>List of Contributors</i>	vii
<i>Preface</i>	ix
<i>Contents of Other Volumes</i>	xvii

1. BASIC CONCEPTS OF DOSIMETRY

WILLIAM C. ROESCH AND FRANK H. ATTIX

I. Introduction	2
II. Historical Development of Dosimetry	6
III. Fundamental Description of Radiation Fields	18
IV. Interaction of Radiation and Matter	26
V. Radiation Dosimetry	32
References	40

2. MICROSCOPIC ENERGY DISTRIBUTION IN IRRADIATED MATTER

HARALD H. ROSSI

I. Basic Considerations	43
II. LET Distributions	61
III. Y Distributions	80
IV. Z Distributions	83
V. Summary of Present Status and Recommendations for Future Developments	88
References	90

3. x-RAY AND γ -RAY INTERACTIONS

ROBLEY D. EVANS

I. Introduction	94
II. Attenuation of x Rays and γ Rays	94
III. Compton Effect	99
IV. Photoelectric Effect	111
V. Pair Production by Photons	111
VI. Mass Attenuation and Absorption Coefficients for Photons in Narrow-Beam Geometry	112
VII. Interpretation of Scintillation Spectrometer Pulse-Height Spectra	144

VIII. Self-Absorption in γ -Sources	148
IX. Buildup Factor for Photons in Broad Beam Attenuation	149
X. γ -Ray Output of Radionuclides	152
References	153

4. CHARGED-PARTICLE INTERACTIONS

H. BICHSEL

I. Introduction	157
II. Stopping Power	165
III. Range	203
IV. Heavy-Particle Beams	215
References	224

5. MATHEMATICAL THEORY OF RADIATION FIELDS

WILLIAM C. ROESCH

I. Introduction	229
II. Transport Equations	230
III. Dosimetry Principles	238
IV. Adjoints	242
V. Homogeneous, Infinite Media	247
References	272

6. NEUTRON INTERACTIONS AND PENETRATION IN TISSUE

J. A. AUXIER, W. S. SNYDER, AND T. D. JONES

I. Introduction	275
II. Interactions of Neutrons with Tissue Elements	277
III. Units and Calculations of Dose	285
IV. Calculation of Neutron Dose in Large Objects	291
References	315

7. IONIZATION

I. T. MYERS

I. Ionization in Gases	317
II. Ionization in Liquids	324
III. Ionization in Solids	325
References	328

8. CAVITY-CHAMBER THEORY**T. E. BURLIN**

I. Introduction	332
II. Cavity Dimensions Small Compared with the Electron Ranges	335
III. Cavity Dimensions Large Compared with the Electron Ranges	361
IV. Cavity Dimensions Comparable with the Electron Ranges	363
V. The Special Case of the "Matched" Gas and Wall Material	368
VI. Absolute Measurement of the Stopping Power Ratio	370
VII. Experimental Examination of Cavity Theory	372
VIII. Measurement of Absorbed Dose and Exposure	378
IX. Radiations Other Than x and γ Rays	382
X. The Application of Cavity Theory to Devices Other Than the Ionization Chamber	385
References	388
APPENDIX : Useful Physical Constants and Conversion Factors	393
<i>Author Index</i>	395
<i>Subject Index</i>	401
