<i>List of Contributors</i>	vii
<i>Preface</i>	ix
<i>Contents of Other Volumes</i>	xvii

9. IONIZATION CHAMBERS

J. W. BOAG

I. Introduction	2
II. The Design of Cavity Ionization Chambers	2
III. Ion Collection	11
IV. Charge or Current Measurement	41
V. Special Types of Ionization Chambers	50
References	67

10. GEIGER-MUELLER AND PROPORTIONAL COUNTERS

E. W. EMERY

I. Introduction	73
II. Counter Tubes	75
III. Operating Details	92
IV. γ - and x-Ray Counters	101
V. β -Ray Counters	108
VI. Neutron Counters	114
References	120

11. SCINTILLATION DETECTORS

WOLFGANG J. RAMM

I. Physics of Scintillation Detectors	123
II. Scintillating Materials and Their Light Yield	126
III. Scintillation Detector Dosimetry of x and γ Rays	138
IV. Scintillation Detector Dosimetry of Charged Particles	152
V. Scintillation Detector Dosimetry of Neutrons	158
References	165

12. CHEMICAL DOSIMETRY**HUGO FRICKE AND EDWIN J. HART**

I. Introduction	167
II. Basic Principles	170
III. Experimental Procedures	181
IV. Aqueous Dosimeters	185
V. Nonaqueous Dosimeters	220
VI. Pulsed Radiations	224
VII. Calculation of Dose Absorbed in Specimen	229
References	232

13. SOLID STATE INTEGRATING DOSIMETERS**J. F. FOWLER AND F. H. ATTIX**

I. Introduction	241
II. Dose Measurement Using Centers Stable with Respect to Readout	248
III. Radiation-Induced Centers Necessarily Destroyed by the Measurement Process	269
IV. Conclusions	281
V. Addendum	282
References	283

14. SOLID STATE ELECTRICAL CONDUCTIVITY DOSIMETERS**J. F. FOWLER**

I. Introduction	291
II. Semiconductor Junction Detectors	294
III. Dosimetry by Permanent Damage Induced in Silicon Junctions	305
IV. Conductivity Induced in Insulating Materials	308
V. Conclusions	320
References	321

15. DOSIMETRY WITH PHOTOGRAPHIC EMULSIONS**ROBERT A. DUDLEY**

I. The Fundamental Photographic Process	326
II. Quantification of Emulsion Response to Radiation	330
III. Dosimetry of Electrons	339
IV. Dosimetry of x and γ Rays	347
V. Dosimetry of Heavy Charged Particles	357
VI. Dosimetry of Neutrons	361
VII. Calibration and Standardization Techniques	372
VIII. Instrumentation	377
IX. Applications	382
References	382

16. CALORIMETRY**J. S. LAUGHLIN AND S. GENNA**

I. Introduction	389
II. Principles of Calorimetry	392
III. Calorimetric Determination of Energy Fluence for x- or γ -Ray Beams	424
IV. Calorimetric Determination of Absorbed Dose	428
V. Source Strength Calibration	436
References	439

APPENDIX: Useful Physical Constants and Conversion Factors	443
