

CONTENTS

PREFACE	vii
1 PRELIMINARY SURVEY	1
2 DIRAC FIELD THEORY AND THE LEPTONIC CURRENT	12
2.1 Relativistic notation	12
2.2 The Dirac equation	22
2.3 The field operator of the electron	43
2.4 Wave function and field theory for the neutrino	55
2.5 The leptonic current	62
3 PURELY LEPTONIC PROCESSES	72
3.1 Muon decay	72
3.2 Electron-neutrino scattering	86
3.3 Intermediate vector boson hypothesis	93
4 SEMILEPTONIC PROCESSES	102
4.1 SU(3) and the Cabibbo hypothesis	103
4.2 Hypercharge conserving semileptonic processes	121
4.3 Hypercharge nonconserving semileptonic processes	223
5 PURELY HADRONIC PROCESSES	253
5.1 Hypercharge nonconserving purely hadronic decays	255
5.2 Hypercharge conserving weak processes	296
6 UNIFIED GAUGE THEORIES OF WEAK AND ELECTROMAGNETIC INTERACTIONS	306
6.1 Introduction	306
6.2 Gauge invariant theory for weak and electromagnetic interactions	312
6.3 Spontaneously broken gauge theories	319
6.4 Purely leptonic processes	330
6.5 Inclusion of hadrons	338
6.6 Semileptonic neutral current processes	348
6.7 Higgs particles	363
6.8 Outstanding problems	369
6.9 Quantum chromodynamics	377

7 CP-VIOLATION	413
7.1 The neutral kaon system	414
7.2 Experimental data on CP-violation	421
7.3 Models of CP-violation	425
APPENDIX	434
REFERENCES	436
INDEX	452
