

CONTENTS

1. INTRODUCTION	1
1.1. The wave nature of the neutron	1
1.2. Neutron beams from nuclear reactors	2
1.3. Monochromatization	5
1.4. Neutron diffractometers	7
1.5. Neutrons and X-rays	19
2. THE SCATTERING OF NEUTRONS BY ATOMS	21
2.1. Introduction	21
2.2. Neutron scattering by a single nucleus	24
2.3. Assemblies of nuclei in solids	35
2.4. Experimental values of the scattering constants of elements and isotopes	38
2.5. The integrated scattering by polycrystalline substances	50
2.6. The effect of finite nuclear mass: inelastic scattering	54
2.7. X-ray and neutron scattering amplitudes	63
3. DIFFRACTION BY CRYSTALS	65
3.1. Primary and secondary extinction	65
3.2. The coefficients of true absorption for X-rays and neutrons	71
3.3. Ideally-imperfect crystals: plane-parallel slabs	75
3.4. Experimental measurements with single crystals	78
3.5. Measurement of Q values for a zone of reflections	80
3.6. Zachariasen's calculation	84
3.7. Further development of Zachariasen's calculation	85
3.8. Correction for thermal diffuse scattering	90
3.9. The use of powdered crystals	92
4. EXPERIMENTAL TECHNIQUES FOR DIFFRACTION MEASUREMENTS	94
4.1. Production of the monochromatic beam	94
4.2. The choice of monochromator	97
4.3. Analysis of the monochromatic beam: parallel and antiparallel positions	101
4.4. The optics of collimating systems	103
4.5. The powder diffraction method	111
4.6. Single-crystal measurements	124

CONTENTS

4.7. Profile refinement in powder diffraction	130
4.8. Measurements at low and high temperatures	133
4.9. Use of 'cold' and 'hot' sources	138
4.10. Techniques using 'white' radiation: time-of-flight crystallography	140
5. FUNDAMENTAL MEASUREMENTS OF SCATTERING AMPLITUDES	155
5.1. General determination of the sign of $\bar{b}$	155
5.2. General methods of determining the magnitude of $\bar{b}$	162
5.3. Subsidiary methods of determining $\bar{b}$	167
5.4. The gravity mirror refractometer: Christiansen filters	170
5.5. <i>Pendellösung</i> fringes	178
5.6. Complex scattering amplitudes	182
6. THE PRINCIPLES OF MAGNETIC SCATTERING	189
6.1. Introduction	189
6.2. Paramagnetic scattering	191
6.3. Spin and orbital coupling	198
6.4. Scattering by antiferromagnetic and ferromagnetic materials	202
6.5. Use of unpolarized neutrons	206
6.6. Polarized-neutron beams	213
6.7. Scattering by rare-earth atoms	221
7. MAGNETIC FORM FACTORS	226
7.1. The iron group of transition metals	226
7.2. The 4d metals	241
7.3. The rare-earth elements	245
7.4. Uranium	250
7.5. Covalency effects in salts	251
8. OBSERVATION OF MAGNETIC SCATTERING	259
8.1. Paramagnetic materials	259
8.2. Ferromagnetism	260
8.3. Antiferromagnetism	260
8.4. Spiral-spin arrangements: helimagnetism	261
8.5. Antiphase domains and sinusoidal variations of moments	271
8.6. Magnetic symmetry	275
9. INELASTIC SCATTERING	283
9.1. Introduction	283
9.2. Energy and momentum relations	286

9.3. Experimental measurements and apparatus	288
9.4. Incoherent scattering	299
9.5. Magnetic scattering	303
9.6. Critical scattering	313
SUMMARY of principles and fields of application of neutron diffraction, with a table of comparative properties of X-rays and neutrons	
	319
10. DETERMINATION OF THE ATOMIC POSITIONS OF LIGHT ELEMENTS	
	323
10.1. Introduction	323
10.2. Studies with polycrystalline samples	324
10.3. The development of single-crystal methods	328
10.4. Application of Fourier-synthesis methods to single-crystal data	332
11. THE STUDY OF MOLECULAR STRUCTURE	
	343
11.1. Hydrates	343
11.2. Hydrogen bonds in aromatic compounds	349
11.3. Correlation of X-ray and neutron data	352
11.4. Biological materials	358
11.5. Thermal motion and bond-length determination	363
11.6. Study of inelastic incoherent scattering	369
12. STRUCTURAL INVESTIGATIONS INVOLVING DISTINCTION BETWEEN ATOMS OF NEIGHBOURING ATOMIC NUMBER	
	380
12.1. Alloys of the transition elements	380
12.2. Spinel structures	386
12.3. Inorganic cyanides	391
12.4. σ -phases	394
13. INVESTIGATIONS OF MAGNETIC MATERIALS	
I. METALS AND ALLOYS	395
13.1. The transition metals of the 3d group	395
13.2. Rare-earth metals	407
13.3. Rare-earth alloys	418
13.4. Transition-metal alloys	419
13.5. Disorder and defects in ferromagnetic alloys	432

14. INVESTIGATIONS OF MAGNETIC MATERIALS	
II. OXIDES, SULPHIDES, HALIDES, ETC.	444
14.1. Oxides, sulphides of types MX, MX ₂	444
14.2. Transition-group halides MX ₂ and related compounds	462
14.3. Haematite and ilmenite structures	470
14.4. Perovskite structures	477
14.5. Manganites RMnO ₃ : non-collinear structures	487
14.6. Iron-group trifluorides	496
14.7. Magnetite, ferrites, and chromites	499
14.8. The sulphates RSO ₄ and CrVO ₄	506
15. SOME TOPICS IN NEUTRON POLARIZATION	512
15.1. Introduction	512
15.2. Single transmission effect	514
15.3. Double transmission effect	517
15.4. Measurement of domain size	519
15.5. Magnetic refraction at domain boundaries	521
15.6. Reflection by magnetized mirrors	523
15.7. Polarization of the mirror-reflected beam	526
15.8. Polarization effects in Bragg-reflected beams	527
15.9. Polarization analysis	530
15.10. Polarizing filters	541
16. STUDY OF LIQUIDS, GLASSES, AND GASES	544
16.1. Introduction	544
16.2. Space-time correlation functions	546
16.3. Neutron scattering patterns	548
16.4. Experimental measurements for simple liquids	552
16.5. Binary alloys	561
16.6. Molecular liquids	563
16.7. Atomic motion	567
16.8. Structure of glasses	573
16.9. Diffraction by gases	578
17. DEFECTS AND SMALL-ANGLE SCATTERING	581
17.1. Use of long-wavelength neutrons	581
17.2. Transmission measurements of defects	582
17.3. Angular variation of scattering	586
17.4. Non-stoichiometric compounds	588
17.5. Small-angle scattering	591
