<b>Preface</b>	<b>xi</b>
<b>1 Survey of the Book</b>	<b>1</b>
<b>2 General Aspects of Neutron Scattering</b>	<b>9</b>
2.1 Properties of the neutron	9
2.2 Definition of the cross sections	11
2.3 Neutron spectroscopy	28
2.4 Linear response function, relaxation function and generalised susceptibility	36
2.5 Interpretation of the correlation functions in the classical approximation	42
2.6 General expression of the incoherent quasielastic neutron scattering for molecules	44
2.7 Neutron spectroscopy of internal vibrations	48
2.8 Phonon scattering	53
2.9 Combination of the different kinds of motions	66
2.10 General properties of the rotational and translational scattering functions	68
Appendix A	71
<b>3 Instruments and Methods in Cold Neutron Scattering</b>	<b>72</b>
3.1 Introduction	72
3.2 Time-of-flight spectrometers	81
3.3 Backscattering spectrometers	91
3.4 Neutron spin-echo spectrometers	100
3.5 Conclusion	105
<b>4 Multiple Scattering Effects</b>	<b>107</b>
4.1 Introduction	107
4.2 Expansion of the effective scattering law	110

4.3	Evaluation of the scattered fluxes of successive orders in the particular case of quasielastic incoherent scattering	124
4.4	Examples of the application of the quasielastic approximation	132
4.5	Monte Carlo simulation techniques	138
	Appendix: Evaluation of the attenuation corrections for single scattering from samples confined within containers	142
<b>5</b>	<b>Long-range Translational Diffusion</b>	<b>148</b>
5.1	The continuous diffusion model	150
5.2	The jump-diffusion model	156
5.3	Diffuse motion in water	167
<b>6</b>	<b>Molecular Reorientations in Orientationally Disordered Crystals</b>	<b>176</b>
6.1	Rotational potential in plastic crystals	176
6.2	Isotropic rotational diffusion	180
6.3	Examples of molecular isotropic rotational diffusion	183
6.4	Continuous rotational diffusion on a circle	186
6.5	Jump model among two sites	189
6.6	Jumps among three equivalent sites equally spaced on a circle	194
6.7	Jump model among N equivalent sites on a circle	197
6.8	Examples of jump models over a circle	203
6.9	Reorientations of a molecule about several different axes in space	209
6.10	Reorientations about mobile and fixed axes	228
6.11	Extension of the application of group-theory formalism for the evaluation of the neutron scattering law	242
6.12	Conclusion	249
<b>7</b>	<b>Recent Developments in the Investigation of Orientationally Disordered Phases</b>	<b>250</b>
7.1	Introduction	250
7.2	Uniaxial rotation with non-uniform distribution	252
7.3	Rotation over a sphere with non-uniform distribution	253
7.4	Stochastic equations	265
7.5	Neutron scattering law for a uniaxial rotator in an N-fold potential	275
7.6	IONS law for a particle diffusing in a cosine potential in one dimension	287
7.7	Rotational diffusion in a three-dimensional potential	290
7.8	The microscopic approach	306
7.9	Investigation of orientational disorder by Raman and infrared spectroscopies	316

<b>8</b>	<b>Single-crystal and Partially Oriented Sample Studies</b>	<b>329</b>
8.1	Single-crystal studies	330
8.2	Two-dimensional compounds	343
<b>9</b>	<b>Quasielastic Neutron Scattering for Continuous or Random Jump-diffusion of Molecules in Bounded Media</b>	<b>357</b>
9.1	One-dimensional diffusion between two walls	358
9.2	Three-dimensional diffusion in a potential of spherical symmetry	363
9.3	Restricted diffusion inside a volume with an anisotropic shape	374
9.4	Random jump-diffusion in bounded media	378
9.5	Adsorption of molecules by zeolites	385
<b>10</b>	<b>Dynamical Studies of Polymers and Biomolecules</b>	<b>399</b>
10.1	Polymers in solution and in melts	399
10.2	Biomolecular applications of quasi-elastic neutron scattering	405
	<b>References</b>	<b>419</b>
	<b>Index</b>	<b>433</b>
