

CONTENTS

A. DESCRIPTIVE THEORY OF NUCLEI	1
I. Basic Facts about Nuclei	1
II. The Size of Nuclei	7
A. Methods of Determining Size	7
B. Conclusions Regarding the Constituents of Nuclei	12
III. β -Disintegration (Descriptive)	14
A. Stability of Isobars	15
B. Application to Nuclear Abundance	16
IV. Further Facts on Nuclear Disintegrations	17
A. γ -Rays	17
B. Summary of Decay Processes	17
V. Spin and Statistics	19
A. Spin and Its Measurement	19
B. Statistics	20
C. Nuclei of Non-zero Spin	22
VI. β -Disintegration and the Neutrino	25
A. Distribution of Electron Energies	25
B. Experimental Evidence for the Neutrino	26
VII. π -Mesons and Others	29
A. Charged π -Mesons	30
B. Neutral π -Mesons	30
C. μ -Mesons	30
D. Other Mesons	31
B. QUANTITATIVE THEORY OF NUCLEAR FORCES	33
VIII. Physical Properties of Proton, Neutron, and Deuteron	33
A. Proton	34
B. Neutron	35

C.	Deuteron	36
D.	Non-additivity of the Nucleon Moments	39
IX.	Ground State of the Deuteron	42
A.	Binding Energy	42
B.	Wave Equation	44
C.	Excited States of the Deuteron	47
X.	Scattering of Neutrons by Free Protons	50
A.	Phase Shifts as a Function of Angular Momentum	51
B.	Spherical Symmetry of Scattering	52
C.	Total Cross Section	53
D.	Scattering Length	54
E.	Effective Range	55
F.	Experimental Results on Neutron-Proton Scattering	58
G.	Singlet State of the Deuteron	59
XI.	Effects of Molecular Binding; Coherent Scattering	62
A.	Effects of Binding of Proton in Molecules	62
B.	Coherent Scattering and Its Measurement	64
C.	Results of Low-Energy Scattering Experiments	72
XII.	Interaction of the Deuteron with Radiation	75
A.	Photodisintegration	75
B.	Experiments on Photodisintegration	79
C.	Capture of Neutrons by Protons	81
D.	Interaction and Mesonic Effects	83
E.	Photoeffect and the Potential Parameters	83
XIII.	Scattering of Protons by Protons	85
A.	Theory of Proton-Proton Scattering	86
B.	Effective-Range Theory; Proton-Proton Scattering	90
C.	Experiments on Proton-Proton Scattering	94
D.	Equivalence of Neutron-Proton and Proton-Proton Forces	96
XIV.	Non-Central Forces	98
A.	States of the Deuteron	99
B.	Neutron-Proton Scattering	106
C.	Photodisintegration and Neutron Capture by Protons	106
XV.	Saturation of Nuclear Forces	108
A.	Exchange Forces	109
B.	Spin and Isotopic Spin	112
C.	Charge Independence	115
XVI.	Nucleon Scattering at High Energies	119
A.	Neutron-Proton Scattering	120
B.	Proton-Proton Scattering	125
C.	Inelastic Proton-Proton Scattering	126
D.	Charge Independence	128
E.	The Nucleon Core	129
F.	Phase-Shift Analysis	131
G.	Conclusions	132

XVII.	Polarization of Nucleons	133
	A. Quantum Mechanics of Polarized Beams	133
	B. The Scattering Matrix	136
	C. Measurement of Polarized Beams	139
	D. Experiments with Polarized Neutrons	143
XVIII.	Sketch of the Meson Theory of Nuclear Forces	147
	A. Charged and Neutral Mesons; Symmetric Theory	149
	B. Scalar and Pseudoscalar Mesons	152
	C. Coupling of Pseudoscalar Meson and Nucleon	154
C. COMPLEX NUCLEI. β -DECAY		
XIX.	The Structure of Nuclei	157
	A. The Liquid Drop; Semi-empirical Energies	157
	B. The Fermi Gas	160
	C. The Shell Model	162
	D. The Collective Nuclear Model	173
XX.	Nuclear Reactions and Scattering	177
	A. Elastic and Total Cross Sections	177
	B. Resonances and the Dispersion Formula	179
	C. Observations on Resonances	186
	D. The Compound Nucleus	190
	E. Density of Nuclear Energy Levels—Nuclear Temperature	200
	F. The Optical Model	202
	G. High-Energy Reactions	208
	H. Emission and Absorption of γ -Rays	209
XXI.	β -Disintegration	217
	A. Allowed Transitions	219
	B. Lifetimes in Allowed Transitions	222
	C. Lifetimes in Forbidden Transitions	225
	D. Fermi and Gamow-Teller Selection Rules	226
	E. Electron Capture	230
	F. Neutrino and Antineutrino	231
	Some Numerical Relations	234
	Appendix: Table of Nuclear Species	236
