

Table of Contents

Volume II

Preface to Volume II

III. Meson Physics

III A. Properties of π Mesons

27. General Properties of π Mesons

- a. Charge*
- b. Mass*
- c. Lifetime*

28. Spin and Parity of π Mesons

- a. Spin of Charged Mesons*
- b. Spin of Neutral Mesons*
- c. Parity of Charged Mesons*
- d. Parity of Neutral Mesons*

III B. Meson Scattering

29. Scattering of π Mesons by Protons: General

- a. Weak Coupling Theory for Total Cross Sections*
- b. Weak Coupling Theory of Angular Distributions*
- c. Experimental Data on Total Cross Sections*
- d. Experimental Data on Angular Distributions*

30. Isotopic Spin in Nuclear Physics

- a. Charge Symmetry and Charge Independence*
- b. Isotopic Spin Formalism*
- c. Systems of Two and More Nucleons*
- d. Interaction Between Nucleons*
- e. Isotopic Spin in Field Theory*
- f. The Law of Conservation of Heavy Particles*

31. Isotopic Spin Formalism in Meson Theory

- a. Consequences of Charge Symmetry*
- b. The "Symmetrical" Meson-Nucleon Interaction*
- c. Nuclear Forces*
- d. Conservation of Isotopic Spin*
- e. Isotopic Spin of Meson*
- f. Quantum Numbers for Nucleon-Meson System*
- g. Wave Functions of Nucleon-Meson System*
- h. Application to Scattering Theory*

III B. Meson Scattering—*continued***32. Phase Shift Analysis**

- a.* Qualitative Argument
- b.* Formula for Scattering of Positive Mesons
- c.* Negative Mesons and Notation
- d.* Actual Analysis
- e.* Discussion
- f.* Ambiguity of Sign
- g.* Yang and Minami Ambiguities
- h.* Ashkin Graphical Method
- i.* Polarization of the Recoil Nucleon

33. Low Energy Scattering Experiments

- a.* General
- b.* Experiments at 60 Mev
- c.* Analysis of Steinberger Solutions
- d.* Experiments Around 40 Mev
- e.* Experiments at 20–40 Mev
- f.* Charge-Exchange Capture
- g.* Scattering at Very Low Energies
- h.* Mesic Atoms
- i.* Discussion

34. High Energy Scattering (Above 120 Mev)

- a.* Total Cross Section for Positive Mesons
- b.* Total Cross Section for Negative Mesons
- c.* Angular Distribution
- d.* Phase Shifts
- e.* Discussion of Phase Shifts
- f.* The *D* States
- g.* Simple Resonance Theory

III C. Photoproduction**35. Photomeson Production: Theoretical Background**

- a.* Energy Momentum Relations
- b.* The Processes Involved in Weak Coupling Theory
- c.* Comparison with Observation
- d.* Effect of Magnetic Moment
- e.* Classical Calculation and Strong Coupling
- f.* Angular Momentum Arguments

36. Photomeson Production: Experiments

- a.* General
- b.* Charged Mesons
- c.* Neutral Mesons
- d.* Ratio of Positive and Negative Mesons
- e.* Meson Production from Deuterons
- f.* Meson Production from Helium

III C. Photoproduction—continued**37. Photomeson Production: Interpretation**

- a.* The *S* State
- b.* Comparison of Charged Production with Theory
- c.* Comparison Between Neutral and Charged Photomeson Production
- d.* The *P* States: Resonance
- e.* Argument for Fermi vs. Yang Solution

III D. Meson Theory**38. The Old Strong Coupling Theory**

- a.* General Assumptions
- b.* Structure of the Nucleon
- c.* Meson Scattering
- d.* Critique

39. Development of Meson Theory, 1947–1953

- a.* Weak Coupling
- b.* The Theory of Brueckner, Case, and Watson
- c.* Lévy's Theory of Nuclear Forces
- d.* Theory of Drell and Henley
- e.* Chew's Theory
- f.* Dyson's Theory

40. The Tamm-Dancoff Method

- a.* General Principles
- b.* Self-Energy of a Nucleon
- c.* Interaction Between Two Nucleons
- d.* Meson-Nucleon Scattering
- e.* Scattering States
- f.* Constants of Motion and Radiation Damping Theory
- g.* The Integral Equation
- h.* The Scattering Theory of Brueckner and Watson

41. The Relativistic Integral Equation for Meson Scattering

- a.* States Considered
- b.* Fundamental Equation
- c.* Omission of Self-Energy Terms
- d.* Isotopic Spin
- e.* Reduction of Wave Function to Large Components
- f.* The Integral Equation
- g.* Elimination of Singularity

42. On the Solution of the Integral Equation

- a.* Born Approximation
- b.* Exact Solution vs. Born Approximation
- c.* Chew's Variational Solution
- d.* Numerical Results
- e.* Asymptotic Behavior
- f.* The Differential Equation Method
- g.* Numerical Solution for the *S* State
- h.* The $P_{\frac{1}{2}}$ State
- i.* Attractive Long Range Potential
- j.* *D* States

III D. Meson Theory—continued**43. Renormalization Problems**

- a. Noncovariant Renormalization
- b. Covariant Theory of Cini
- c. Dyson's Theory
- d. Evaluation for $P_{\frac{3}{2}}$ State
- e. The $\frac{1}{2}, \frac{1}{2}$ States
- f. The Sign of the $S_{\frac{1}{2}}$ Phase Shift

44. Theoretical Questions

- a. The Hypothesis of Pair Suppression
- b. Photon Processes
- c. Symmetry Between Emission and Absorption, and the Tamm-Dancoff Approximation
- d. The Low Energy Limit of Scattering
- e. Pair Terms in Nucleon Interaction

45. Recent Theories of Photoproduction of Mesons

- a. Ross' Theory
- b. Theory of Kroll and Ruderman; Value of the Coupling Constant
- c. Theory of Chew
- d. Theory of Watson et al
- e. Compton Scattering by Protons

46. The Magnetic Moment of the Nucleon

- a. Historical
- b. Perturbation Theory
- c. Higher Order Corrections
- d. Use of the Exact Nucleon Propagation Function
- e. Phenomenological Theory of Sachs
- f. Neutron-Electron Interaction

47. Theory of Nuclear Forces

- a. Classical Theory
- b. Divergences and Mixture Theories
- c. Two-Meson Exchange
- d. Lévy's Repulsive Core
- e. Lévy's Numerical Fit
- f. Klein's Theory
- g. The Theory of Brueckner and Watson
- h. Theory of Henley and Ruderman
- i. High Energy Interaction

III E. Meson Production by Particles**48. Production of Mesons by Nucleon Collisions**

- a. Magnitude of Cross Section
- b. Production of π^+ by Proton-Proton Collisions
- c. π^0 Production from Proton-Proton Collisions
- d. Charge Independence and P-N Collisions
- e. Ratio of π^+ to π^- Production
- f. Cross Sections for Various Isotopic Spins
- g. Meson Production by Collisions with Heavier Nuclei

III E. Meson Production by Particles—*continued***49. Multiple Meson Production**

- a.* Multiple and Plural Production
- b.* Theories, Especially That of Fermi
- c.* Multiple Production Observed in N-P Collisions
- d.* Energy and Angular Distribution
- e.* Ratio of Positives to Negatives
- f.* Collision Between π^- and Proton
- g.* Low Energy Region

III F. Other Mesons**50. The μ Meson**

- a.* Mass and Lifetime
- b.* Spin
- c.* Production and Decay of μ Mesons
- d.* μ -Meson Capture
- e.* Interaction of μ Mesons
- f.* μ -Mesic Atoms

51. "Curious" Particles

- a.* Phenomenology
- b.* Hyperons
- c.* τ Mesons
- d.* The θ Meson
- e.* Other K Mesons
- f.* Production of Curious Particles
- g.* Theoretical Considerations
- h.* Do the Curious Particles Play an Important Role in Low Energy Phenomena?

Appendix A—Center-of-Mass Momenta and Wave Length

Appendix B—Center-of-Mass Energies

Appendix C—Relativistic Transformation to Center-of-Mass

Appendix D—Further Notes Added in Proof

Note 1 : Theoretical π^0 Lifetime

Note 2 : On the Scattering of Mesons by Deuterons

Note 3 : Low's Theory of Scattering

Note 4 : Pion Production by Electrons
