Johannesburg, South Africa*

## CONTENTS

- 1. Introduction 3
- 2. Experimental matters 6
  - 2.1. Directory of experimental results 6
  - 2.2. Techniques 8
    - (i) Direct measurement of  $E$  and  $\Delta E/\Delta x$  8
    - (ii) Kinematical coincidences 9
    - (iii) Magnetic analysis 12
    - (iv) Time-of-flight analysis 13
- 3. Semi-quantal considerations 15
  - 3.1. Diffraction or strong absorption model 16
  - 3.2. Methods of integration 21
  - 3.3. Semi-classical approximations 26
  - 3.4. Regge poles 37
  - 3.5. Inelastic scattering 44

*Contents, continued*

4. Phenomenology of optical potentials	55
4.1. Inverse scattering problem	56
4.2. Ambiguities in optical potentials	57
4.3. Scattering and reaction cross section	64
4.4. The Coulomb potential	68
4.5. The spin – orbit potential	70
5. Barrier heights, critical radii and angular momenta	70
5.1. Elastic and quasi-elastic scattering	73
5.2. Coulomb-nuclear interference	75
5.3. Fusion barriers	77
6. Derivation of optical potentials	83
6.1. The liquid drop and Thomas – Fermi models	84
6.2. The two-center shell model	91
6.3. The cluster model	95
6.4. Collective model of relative motion	97
6.5. Folding models	102
6.6. The absorptive potential	109
7. Gross and intermediate structure in excitation functions, backward rise in angular distributions and coupling to other channels	124
7.1. Gross structure oscillations	126
7.2. Intermediate structure in excitation functions	129
7.3. Sharp continuum structure	134
7.4. Backward rise in angular distributions	147
(i) Optical model plus resonance calculations	151
(ii) Resonating group calculations	152
(iii) Optical model calculations with an $l$ -dependent imaginary potential	153
(iv) Particle transfer contributions to elastic and inelastic scattering	157
8. Resonances in the vicinity of the Coulomb barrier and fine structure in excitation functions	167
8.1. Resonances in the vicinity of the Coulomb barrier	169
8.2. Fine structure in excitation functions	176
9. Scattering of very heavy ions and scattering at high energies	189
9.1. Very heavy ion scattering	190
9.2. High energy elastic heavy ion scattering	192
9.3. Factorization hypothesis	198
