

CONTENTS

Preface	v
Chapter 1 INTRODUCTION	1
Chapter 2 MATHEMATICAL STRUCTURES UNDERLYING MONOPOLES IN GAUGE THEORIES	9
<i>Werner Nahm</i>	
2.1 Introduction	10
2.2 The Dirac Monopole	13
Vector bundles	16
Dirac monopoles and charge quantization	22
2.3 Non-abelian Monopoles	24
Monopoles of Dirac type in non-abelian gauge theories	24
Stability considerations for non-abelian monopoles	27
't Hooft-Polyakov monopoles	29
Configurations with spherical and axial symmetry	36
Monopoles break global colour	40
2.4 Dyons	42
2.5 Completely Integrable Equations for Monopoles	45
The Bogomolny equation	45
The Lax pair	48
The patching function	52
The spectral curves of self-dual monopoles	60
A transformation to an ordinary differential equation	62
The solution of the self-duality equation for $T(z)$	73
Arbitrary gauge groups	74
Examples	75
Bäcklund transformations	78
The moduli space of self-dual monopoles	79
The scattering of low energy monopoles	80
Perspectives	81
References	83

Chapter 3	
MONOPOLES AND THEIR QUANTUM FIELDS	85
<i>Neil Craigie</i>	
3.1 The Peculiar Angular Momentum States of Monopoles and Charged Particles	86
3.2 QFT of Point Monopoles and Renormalization	92
3.3 Quantum Fluctuations of a 't Hooft-Polyakov Monopole	107
Semiclassical method — a simple example	107
The quantum fluctuations of a 't Hooft-Polyakov monopole	114
Constraints and collective coordinates	115
Path integral quantization	118
3.4 Electron-Monopole Scattering	126
The partial wave analysis	130
The problem	135
3.5 Fermions Coupled to a 't Hooft-Polyakov Monopole	140
Introduction	140
The classical scattering problem	145
Jackiw-Rebbi zero modes	148
The quantum field theory	149
The Rubakov analysis	157
The cluster argument	161
Instantons, zero modes and the fermion vacuum	166
The induced instanton field near the monopole core	171
Callan's bosonization approach	173
Presence of a θ -angle	178
3.6 The Theory of Monopole Catalysis of Proton Decay	180
Introduction	180
The $SU(5)$ monopole	181
Equivalent meson theory	192
Solution of the Dyson equation and the 't Hooft equation for the $SU(2)_c$ radial QCD	194
Exact solvability through the underlying Kac-Moody algebra	200
Baryon number violating correlation functions	205
Summary and comments on the simplifications	208
(i) Mass corrections	209
(ii) Decoupling of heavy generations	209
(iii) Radiative corrections and higher partial waves	212
3.7 Monopole-Proton Cross Sections	216
Introduction	216
The cross section σ_{CAP}	217
The cross section for catalysis	222
The total cross section for catalysis	228

3.8 Fermion — Grand Unified Monopole Systems as Solvable D = 2	
QFT Problems	233
Introduction	233
The SU(5) monopole-fermion system	235
Calculation of rotator constant Ω	242
Analysis of rotator current interactions	243
Correlation functions and path integral	245
Monopoles with a more complex dyonic structure	248
The double charge SO(10) monopole	252
The double charge $SU(4) \otimes SU(2)_L \otimes SU(2)_R$ monopole	261
Supersymmetric gauge theories	268
Appendix A: Conventions and Notation	270
Appendix B: Exactly Solvable 2-Dimensional QFT's	272
Introduction	272
B.1 The Massless Schwinger Model	274
B.2 Bosonization of Free Massless Fermion Fields in 1 + 1 Dimensions	278
B.3 Heat Kernels and Fermion Determinants	288
B.4 Kac-Moody Current Algebra's and Non-linear Sigma Models	293
B.5 Massless 2-dimensional Gauge Theories and Their Current Algebra	299
B.6 Soliton Representations of Kac-Moody Algebra	304
B.7 Calculation of Correlation Functions	312
B.8 Bibliography	319
References	322
Chapter 4	
MONOPOLES IN COSMOLOGY	327
<i>Qaisar Shafi</i>	
Big Bang Cosmology	328
Phase Transitions in Gauge Theories	330
Cosmological Monopoles	336
Monopole Production in GUT Phase Transition	339
The Inflationary Scenario	343

Inflation with SU(5)	347
Inflation With Higher Dimensional Theories	358
Magnetic Monopoles in SO(10) and E ₆ Grand Unified Theories	370
Conclusion	377
 Chapter 5	
MONOPOLES AND ASTROPHYSICS	379
<i>Neil Craigie</i>	
5.1 Introduction	380
5.2 Galactic Magnetic Fields and the Parker Bound	381
The quenching of the galactic magnetic fields	381
Generation of the galactic magnetic fields	383
Monopole plasma oscillation and monopole-dominated galaxy halo models	384
5.3 Astronomical Flux Limits on Monopoles which can Catalyse	
Proton Decay	387
Neutron stars	389
Possible influence of the core	391
Pulsars	395
White dwarfs	395
Summary	398
References	399
 Chapter 6	
CONCLUSION: PROSPECTS IN HIGHER DIMENSIONS	401
 Chapter 7	
THE EXPERIMENTAL DETECTION OF MAGNETIC MONOPOLES	407
<i>Giorgio Giacomelli</i>	
7.1 Introduction	408
7.2 Summary of the Properties of Magnetic Monopoles	412
7.2.1 Properties based on the Dirac relation	412
7.2.2 Properties of GUT monopoles	413
7.3 Interaction of Monopoles with Matter	416
7.3.1 Introduction	416
7.3.2 The magnetic-monopole-magnetic-dipole interaction	417

7.3.3	Monopolic atoms and molecules	417
7.3.4	Nuclear reactions induced by magnetic monopoles	418
7.3.5	Energy losses of fast monopoles ($\beta > 10^{-2}$)	419
7.3.6	Energy losses of slow monopoles ($10^{-4} < \beta < 10^{-2}$). The fermi gas approximation	420
7.3.7	The Drell effect	424
7.3.8	Energy losses at very low velocities ($\beta < 10^{-4}$)	425
7.3.9	Energy losses in ferromagnetic materials	426
7.3.10	Energy losses in superconductors	426
7.3.11	Energy losses of monopoles in celestial bodies	427
7.4	Monopole Detectors	428
7.4.1	Inductive nonsuperconducting coils	428
7.4.2	Superconducting induction devices	429
7.4.3	Scintillation counters	430
7.4.4	Gaseous detectors	434
7.4.5	Track-etch detectors	437
7.4.6	Other detectors	440
7.5	Searches for “Classical” Monopoles	443
7.5.1	Accelerator searches	443
7.5.2	Searches in the cosmic radiation	446
7.5.3	Searches in bulk matter	447
7.5.4	Multi- γ events	449
7.5.5	Relevance of “classical” pole searches for larger mass poles	449
7.6	Searches for GUT Monopoles	453
7.6.1	Introduction	453
7.6.2	Searches with superconducting induction devices	456
7.6.3	Counter searches	461
7.6.4	Searches in bulk matter	467
7.6.5	Searches with track-etch detectors	468
7.7	Monopole Catalysis of Proton Decay	471
7.7.1	Introduction	471
7.7.2	Searches for catalysis with proton decay detectors	473
7.7.3	Limit from neutrinos from the sun	479
7.7.4	Monopole catalysis of nucleon decay in the earth	479
7.8	Other Types of Searches	481
7.8.1	Introduction	481
7.8.2	Tachyon monopoles	482
7.8.3	Anomalous protons	482
7.9	Outlook and Conclusions	484
	References	494
