 CHAPTER	
1 PROPERTIES OF NUCLEAR RADIATION	1
1.1 Types of radiation. 1.2 Energy loss processes in matter (<i>a</i>) Ions; (<i>b</i>) Electrons; (<i>c</i>) Gamma rays; (<i>d</i>) Neutrons. 1.3 Energy loss and ionization. 1.4 Statistical fluctuations in ionization.	
2 AN OUTLINE OF DETECTION METHODS	26
2.1 Introduction. 2.2 Gas-filled counters (<i>a</i>) The ionization chamber; (<i>b</i>) Recombination; (<i>c</i>) Saturation; (<i>d</i>) The shape of the pulse; (<i>e</i>) Energy resolution of ionization chambers; (<i>f</i>) The proportional counter; (<i>g</i>) The Geiger counter. 2.3 The scintillation counter (<i>a</i>) Requirements of the scintillation counter; (<i>b</i>) Organic scintillators; (<i>c</i>) Inorganic scintillators; (<i>d</i>) Variation of response with particle type and energy; (<i>e</i>) Efficiency and resolution of scintillation counters. 2.4 Nuclear emulsions. 2.5 Neutron detection methods (<i>a</i>) Introduction; (<i>b</i>) Neutron detector systems. 2.6 Advantages and limitations of earlier detectors.	

- 3 PHYSICAL PROPERTIES OF SOLID STATE COUNTERS** 56
- 3.1 Introduction. 3.2 Properties of semiconductors (a) Energy bands; (b) Charge transport; (c) Localized centres; (d) Relaxation processes. 3.3 Ionization and charge collection. 3.4 The signal pulse.
- 4 NOISE AND THE LIMIT OF ENERGY RESOLUTION** 82
- 4.1 Statistical limitations. 4.2 Incomplete charge collection. 4.3 Thermal noise. 4.4 Current noise (a) Shot noise; (b) Generation-recombination noise; (c) Excess noise. 4.5 Hot electrons and high electric fields. 4.6 The design and operation of counters.
- 5 HOMOGENEOUS CONDUCTION COUNTERS** 102
- 5.1 Materials and electrodes. 5.2 Homogeneous silicon counters. 5.3 Integrating flux counters. 5.4 Cadmium sulphide pulse counters. 5.5 Other counter materials. 5.6 A.C. operation.
- 6 RECTIFYING JUNCTION COUNTERS** 124
- 6.1 Semiconductor rectifiers. 6.2 The depletion layer thickness. 6.3 Noise and energy resolution in junction counters. 6.4 Surface barriers and diffused junctions. 6.5 Lithium ion-drift counters. 6.6 Junction counters with amplification.

- 7 PREPARATION AND PROPERTIES OF SEMICONDUCTOR JUNCTION COUNTERS** 148
- 7.1 Diffused junctions. 7.2 Surface barriers.
7.3 Lithium ion-drift devices. 7.4 Encapsulation and edge protection. 7.5 Electrical testing (a) Rectification; (b) Reverse current; (c) Capacitance; (d) Noise measurements. 7.6 Testing with radiation (a) Energy resolution; (b) Depletion layer thickness; (c) Window thickness. 7.7 Carrier recombination and fission defect. 7.8 The effects of temperature, magnetic field and light. 7.9 A comparison between types of junction counter.
- 8 INSTRUMENTATION FOR SEMICONDUCTOR COUNTERS** 181
- 8.1 Introduction. 8.2 Pulse amplifiers (a) Voltage-sensitive and charge-sensitive amplifiers; (b) Low-noise pre-amplifier design; (c) The optimization of signal to noise ratio; (d) Fast pulse amplification; (e) Pulse shape discrimination for junction counters. 8.3 Electronics for complex systems (a) Small arrays; (b) Large arrays.
- 9 APPLICATIONS OF SEMICONDUCTOR COUNTERS** 205
- 9.1 Introduction. 9.2 Applications in nuclear physics (a) Alpha-particle spectrometry; (b) Charged-particle spectrometry in nuclear reactions; (c) Discrimination of particle type; (d) Polarization measurements; (e) Fission studies; (f) Photonuclear experiments (g) High energy physics; (h) Beta spectrometry; (i) Gamma spectrometry; (j) Neutron detectors; (k) Measurements in space. 9.3 Other applications (a) Radiation monitoring; (b) Medical applications; (c) Military and Civil Defence applications.

10 RADIATION DAMAGE IN SEMICONDUCTOR DETECTORS	265
10.1 Introduction. 10.2 Processes of radiation damage. (a) Defect formation; (b) Damage by neutrons; (c) Damage by charged particles; (d) Damage by electrons and gamma rays. 10.3 Effects of radiation damage on detector performance (a) The influence of defects on semiconductor properties; (b) The observed effects of radiation damage. 10.4 The use of radiation damage effects in fast neutron flux measurement.	
<i>Appendix</i>	291
The physical properties of near-intrinsic silicon and germanium	
<i>Classified Bibliography</i>	292
<i>Index</i>	322
