### CHAPTER I

#### THEORY OF THE NUCLEUS AS A MANY-BODY SYSTEM

by R. J. EDEN

1. INTRODUCTION . . . . .	1
1.1 Summary . . . . .	4
1.2 Outline of recent literature . . . . .	5
2. THE INTERACTION OF TWO PARTICLES . . . . .	6
3. MANY-BODY PERTURBATION THEORY . . . . .	9
4. THE HARTREE-FOCK APPROXIMATION . . . . .	14
4.1 Infinite nuclear medium . . . . .	15
5. THE REACTION MATRIX . . . . .	16
6. THE SELF-CONSISTENT EQUATIONS FOR A FINITE NUCLEUS . . . . .	18
6.1 The self-consistency procedure . . . . .	20
7. THE BRUECKNER APPROXIMATION FOR AN INFINITE NUCLEAR MEDIUM . . . . .	22
8. THE CORRECTION TERMS . . . . .	27
8.1 Infinite nuclear medium . . . . .	27
8.2 Finite nucleus . . . . .	29
9. THE SHELL MODEL . . . . .	30
10. THE OPTICAL MODEL . . . . .	35
11. HIGH ENERGY NUCLEAR REACTIONS . . . . .	38
REFERENCES . . . . .	41

### CHAPTER II

#### THE SHELL MODEL

by J. P. ELLIOTT

1. INTRODUCTION . . . . .	42
2. THE ORIGIN OF THE SHELL MODEL . . . . .	43
3. THE SINGLE PARTICLE VERSION . . . . .	46
3.1 Spins . . . . .	47
3.2 Magnetic moments . . . . .	47
3.3 Beta-decay . . . . .	50
4. IMPROVEMENTS TO THE SINGLE-PARTICLE VERSION . . . . .	51
4.1 Spectra . . . . .	52
4.2 Magnetic moments . . . . .	58
4.3 Beta-decay . . . . .	60

5.	INTERMEDIATE COUPLING THEORY . . . . .	60
5.1	Coupling schemes . . . . .	61
5.2	The interaction . . . . .	62
5.3	Isotopic spin and the classification of states . . . . .	63
5.4	Fractional parentage coefficients and the energy matrix . . . . .	66
5.5	Tensor operators . . . . .	68
5.6	Gamma-decay . . . . .	70
5.7	Beta-decay . . . . .	71
5.8	Nucleon capture and emission . . . . .	72
6.	THE INTERMEDIATE COUPLING VERSION-APPLICATIONS . . . . .	73
7.	DISCUSSION OF THE MODEL . . . . .	81
	REFERENCES . . . . .	84

### CHAPTER III HEAVY ION REACTIONS

by J. H. FREMLIN

1.	INTRODUCTION . . . . .	86
2.	PROMISING FIELDS OF WORK FOR HEAVY IONS . . . . .	87
3.	THE ACCELERATION OF HEAVY IONS . . . . .	89
4.	HYDROGEN AND HELIUM . . . . .	94
5.	BERYLLIUM TO FLUORINE . . . . .	95
5.1	. . . . .	95
5.2	Experimental results . . . . .	99
5.3	Nuclear emulsion experiments . . . . .	110
6.	SODIUM TO CALCIUM . . . . .	121
7.	SCANDIUM TO BARIUM . . . . .	138
7.1	. . . . .	138
7.2	Emulsion studies . . . . .	146
8.	RARE EARTHS . . . . .	147
9.	TANTALUM TO PLUTONIUM . . . . .	147
10.	MISCELLANEOUS REACTIONS . . . . .	154
10.1	Coulomb excitation . . . . .	154
10.2	Radiative capture of heavy ions . . . . .	154
11.	FINAL SUMMARY AND CONCLUSIONS . . . . .	157
	REFERENCES . . . . .	157

### CHAPTER IV ANGULAR CORRELATIONS AND POLARIZATION

by L. J. B. GOLDFARB

1.	INTRODUCTION . . . . .	159
2.	GENERAL NOTATION . . . . .	163
3.	ANGULAR CORRELATIONS OF NUCLEAR REACTIONS WITH SPINLESS RADIATION . . . . .	164

4. GENERAL RESULTS FOR NUCLEAR REACTIONS WITHOUT REGARD TO POLARIZATION . . . . .	171
4.1 Channel-spin representation . . . . .	171
4.2 $\mathcal{L}$ -representation . . . . .	174
4.3 Mixed representation . . . . .	177
4.4 Changes in coupling . . . . .	177
5. APPLICATION TO CASCADE-DECAY PROCESSES . . . . .	178
6. APPLICATION TO SPECIFIC NUCLEAR PROCESSES . . . . .	180
6.1 Reactions proceeding through isolated resonances . . . . .	181
6.2 Reactions involving overlapping resonance levels . . . . .	185
6.3 Elastic scattering processes . . . . .	187
7. REACTIONS FOLLOWED BY ONE OR MORE EMISSIONS . . . . .	189
8. DESCRIPTION OF POLARIZATION . . . . .	193
9. POLARIZATION OF SPIN- $\frac{1}{2}$ PARTICLES, $\gamma$ -RADIATION AND PARTICLES OF ARBITRARY SPIN . . . . .	196
9.1 Polarization of spin- $\frac{1}{2}$ particles . . . . .	196
9.2 Polarization of $\gamma$ -radiation . . . . .	201
9.3 Polarization of particles of arbitrary spin . . . . .	203
9.4 Polarization in the channel-spin representation . . . . .	205
APPENDIX - Certain definitions and relations . . . . .	
1. Clebsch-Gordan coefficient . . . . .	207
2. Racah coefficient . . . . .	209
3. Wigner 9- $j$ symbol . . . . .	210
4. Rotation matrix . . . . .	210
5. Density matrix . . . . .	212
REFERENCES . . . . .	213

## CHAPTER V

## RESONANCE REACTIONS, EXPERIMENTAL

by ERICH VOGT

1. INTRODUCTION . . . . .	215
2. SCATTERING OF s-WAVE PARTICLES BY A POTENTIAL WELL .	218
3. THE FORMAL THEORY OF NUCLEAR RESONANCE REACTIONS	225
4. RESONANCE CROSS SECTIONS . . . . .	233
5. RELATION OF RESONANCE PARAMETERS TO NUCLEAR PROPERTIES . . . . .	245
REFERENCES . . . . .	255

## CHAPTER VI

## RESONANCE REACTIONS, THEORETICAL

by H. E. GOVE

1. INTRODUCTION . . . . .	259
2. GENERAL REMARKS ABOUT THE RESONANCE REGION IN LIGHT NUCLEI . . . . .	260

3. REACTION AND SCATTERING DIFFERENTIAL AND TOTAL CROSS SECTIONS . . . . .	266
3.1 Reaction cross sections at a single isolated resonance . . . . .	267
a) <i>Particle in — particle out</i> . . . . .	267
b) <i>Reduced widths for protons and neutrons</i> . . . . .	270
c) <i>Particle in — gamma ray out</i> . . . . .	280
3.2 Elastic scattering cross sections at a single isolated resonance . . . . .	282
3.3 Interference between resonances — reaction cross sections . . . . .	287
a) <i>Low energy neutron cross section of manganese</i> . . . . .	288
b) <i>The reactions C<sup>14</sup> (p, γ)N<sup>15</sup> and C<sup>14</sup> (p, n)N<sup>14</sup> near proton energies of 1.5 MeV</i> . . . . .	289
4. YIELD CURVES FROM RESONANCE REACTIONS — SHAPES . . . . .	292
4.1 Yields from targets of finite thickness including effects of straggle . . . . .	293
4.2 Measurements of natural total width $\Gamma$ . . . . .	298
4.3 Measurements of resonance energy . . . . .	300
5. YIELD CURVES FROM RESONANCE REACTIONS — ABSOLUTE YIELDS . . . . .	302
6. ANGULAR CORRELATION MEASUREMENTS AT A SINGLE ISOLATED RESONANCE . . . . .	305
6.1 Theoretical expressions for angular correlations . . . . .	306
6.2 Applications of the angular correlation formulae to spin determinations . . . . .	308
6.3 Channel spin mixtures . . . . .	312
6.4 Analysis of experimentally measured angular distributions . . . . .	312
REFERENCES . . . . .	314

## CHAPTER VII

## THE STATISTICAL MODEL

by K. J. LE COUTEUR

1. INTRODUCTION . . . . .	318
2. SOME EXPERIMENTAL EVIDENCE . . . . .	320
3. WEISSKOPF'S EVAPORATION THEORY . . . . .	324
4. CROSS SECTIONS FOR PARTICLE ABSORPTION . . . . .	325
4.1 Neutrons . . . . .	325
4.2 Protons . . . . .	328
5. NUCLEAR TEMPERATURE . . . . .	329
6. THE EVAPORATION SPECTRUM . . . . .	331
7. NEUTRON CASCADES . . . . .	332
8. EVAPORATION CASCADES . . . . .	337
9. THE NEUTRON EXCESS . . . . .	340
10. SPALLATION REACTIONS . . . . .	342
11. DECAY PROTONS . . . . .	345
12. RESULTS OF EVAPORATION CASCADE CALCULATIONS . . . . .	345
12.1 Meteorites . . . . .	345
12.2 Mu-meson capture . . . . .	346
13. EMISSION OF LIGHT NUCLEAR FRAGMENTS . . . . .	346

14. ORIGIN OF THE NUCLEAR EXCITATION . . . . .	348
15. COMPARISON BETWEEN CASCADE EMISSION AND EVAPORATION . . . . .	350
16. CONCLUSION . . . . .	352
REFERENCES . . . . .	353

## CHAPTER VIII

**NEUTRON RESONANCES IN HEAVY NUCLEI**

by D. J. HUGHES and R. L. ZIMMERMAN

1. INTRODUCTION . . . . .	356
2. INSTRUMENTS . . . . .	357
3. ANALYSIS OF NEUTRON RESONANCES . . . . .	361
4. RADIATION WIDTHS . . . . .	366
5. LEVEL SPACING . . . . .	368
6. NEUTRON WIDTHS . . . . .	373
7. FISSION WIDTHS . . . . .	376
8. STRENGTH FUNCTION . . . . .	378
9. NUCLEAR RADIUS . . . . .	384
REFERENCES . . . . .	390

## CHAPTER IX

**A SURVEY OF SCATTERING AND REACTION EXPERIMENTS WITH MEDIUM ENERGY NUCLEONS AND ALPHA-PARTICLES**

by P. C. GUGELOT

1. INTRODUCTION . . . . .	391
1.1 The independence hypothesis . . . . .	391
1.2 High energy interactions . . . . .	393
2. THE COMPOUND SYSTEM . . . . .	394
2.1 Statistical theory of nuclear reactions . . . . .	394
2.2 Fermi gas model . . . . .	396
3. THE OPTICAL MODEL . . . . .	399
3.1 Elastic scattering of nucleons . . . . .	400
3.2 Elastic scattering of $\alpha$ -particles . . . . .	405
4. INELASTIC SCATTERING AND REACTIONS . . . . .	406
4.1 Nucleon induced reactions . . . . .	406
4.2 Reactions induced by $\alpha$ -particles . . . . .	414
4.3 Conclusions . . . . .	416
5. SURFACE INTERACTIONS . . . . .	417
6. CAPTURE REACTIONS . . . . .	422
REFERENCES . . . . .	423

## CHAPTER X

## NUCLEAR ROTATIONAL MOTION

by A. K. KERMAN

A. INTRODUCTION . . . . .	427
B. ROTATING NUCLEI . . . . .	427
1. SHELL MODEL AND COLLECTIVE MODEL . . . . .	427
2. ENERGY SPECTRUM AND WAVE FUNCTION FOR EVEN-EVEN NUCLEI . . . . .	429
3. ENERGY SPECTRUM AND WAVE FUNCTIONS FOR ODD NUCLEI . . . . .	432
4. ELECTRIC QUADRUPOLE MOMENTS AND QUADRUPOLE TRANSITIONS . . . . .	437
5. MAGNETIC DIPOLE MOMENTS AND TRANSITIONS . . . . .	441
5.1 Transitions within a band . . . . .	444
5.2 Example . . . . .	445
6. GAMMA TRANSITION BETWEEN DIFFERENT ROTATIONAL BANDS — SELECTION RULES — INTENSITY RULES . . . . .	447
6.1 <i>K</i> -Isomerism . . . . .	450
6.2 Application of $\gamma$ intensity rules . . . . .	450
7. CORIOLIS INTERACTION — BREAKDOWN OF <i>K</i> SELECTION RULES . . . . .	452
8. BETA DECAY . . . . .	454
8.1 Beta decay of $Tm^{170}$ . . . . .	455
8.2 <i>K</i> -selection rules . . . . .	455
8.3 Examples of <i>K</i> -forbidden transitions . . . . .	456
8.4 Allowed transitions . . . . .	456
9. ALPHA DECAY . . . . .	458
10. NEUTRON SCATTERING BY ROTATING NUCLEI . . . . .	462
C. THEORETICAL CONSIDERATIONS . . . . .	467
1. UNIFIED MODEL . . . . .	467
2. THE DEFORMED WELL — SPINS AND DEFORMATIONS . . . . .	467
3. APPROXIMATE SELECTION RULES . . . . .	475
4. MOMENTS OF INERTIA . . . . .	477
4.1 The cranking model . . . . .	477
4.2 The method of Peierls and Yoccoz . . . . .	481
5. TWO BODY FORCES . . . . .	489
REFERENCES . . . . .	491
