

## CONTENTS

I. Introduction	3
References	8
II. The S Matrix—Resonances and Cusps	9
1. Review of General Properties of the S Matrix	9
2. Unitary Condition and the Submatrix for Given J and Parity	15
3. Single-Channel Resonance and Wigner's Theorem	21
4. Parametrization of the Many-Channel S Matrix—Multichannel Resonances	30
5. Complex Scattering Lengths and Cusps	38
III. Application of Dispersion Theory to Resonances and Related Phenomena	47
1. Review of Dispersion Relations; Effective Range Theory and "Polology"	47
2. Two Simple Applications	58
3. Multichannel Effective Range Theory and Resonances	65
4. "Polology" for Inelastic Processes	69
5. Nonresonant Mechanisms for Producing Peaks in Cross Sections	75
6. The Role of Resonances in the Nucleon Form Factors	81
IV. The Decay Modes	91
1. Applications of the Density Matrix to Elementary Particle Interactions	92
2. Selection Rules and Decay Modes of Boson Resonances	118
