

# Contents

List of the Most Important Symbols Used .....	XIII
<b>1. Introduction</b> .....	1
1.1 Classical Physics and Quantum Mechanics .....	1
1.2 Short Historical Review .....	1
<b>2. The Mass and Size of the Atom</b> .....	5
2.1 What is an Atom? .....	5
2.2 Determination of the Mass .....	5
2.3 Methods for Determining Avogadro's Number .....	7
2.3.1 Electrolysis .....	7
2.3.2 The Gas Constant and Boltzmann's Constant .....	7
2.3.3 X-Ray Diffraction in Crystals .....	8
2.3.4 Determination Using Radioactive Decay .....	9
2.4 Determination of the Size of the Atom .....	10
2.4.1 Application of the Kinetic Theory of Gases .....	10
2.4.2 The Interaction Cross Section .....	11
2.4.3 Experimental Determination of Interaction Cross Sections .....	14
2.4.4 Determining the Atomic Size from the Covolume .....	15
2.4.5 Atomic Sizes from X-Ray Diffraction Measurements on Crystals ..	15
2.4.6 Can Individual Atoms Be Seen? .....	20
Problems .....	23
<b>3. Isotopes</b> .....	25
3.1 The Periodic System of the Elements .....	25
3.2 Mass Spectroscopy .....	27
3.2.1 Parabola Method .....	27
3.2.2 Improved Mass Spectrometers .....	30
3.2.3 Results of Mass Spectrometry .....	31
3.2.4 Modern Applications of the Mass Spectrometer .....	32
3.2.5 Isotope Separation .....	33
Problems .....	34
<b>4. The Nucleus of the Atom</b> .....	35
4.1 Passage of Electrons Through Matter .....	35
4.2 Passage of Alpha Particles Through Matter (Rutherford Scattering) .....	37
4.2.1 Some Properties of Alpha Particles .....	37
4.2.2 Scattering of Alpha Particles by a Foil .....	37
4.2.3 Derivation of the Rutherford Scattering Formula .....	39
4.2.4 Experimental Results .....	44
4.2.5 What is Meant by Nuclear Radius? .....	45
Problems .....	46

<b>5. The Photon</b>	47
5.1 Wave Character of Light	47
5.2 Thermal Radiation	49
5.2.1 Spectral Distribution of Black Body Radiation	49
5.2.2 Planck's Radiation Formula	51
5.2.3 Einstein's Derivation of Planck's Formula	52
5.3 The Photoelectric Effect	56
5.4 The Compton Effect	58
5.4.1 Experiments	58
5.4.2 Derivation of the Compton Shift	60
Problems	62
<b>6. The Electron</b>	65
6.1 Production of Free Electrons	65
6.2 Size of the Electron	65
6.3 The Charge of the Electron	66
6.4 The Specific Charge $e/m$ of the Electron	67
6.5 Wave Character of Electrons	70
Problems	74
<b>7. Some Basic Properties of Matter Waves</b>	77
7.1 Wave Packets	77
7.2 Probabilistic Interpretation	81
7.3 The Heisenberg Uncertainty Relation	83
7.4 The Energy-Time Uncertainty Relation	85
7.5 Some Consequences of the Uncertainty Relations for Bound States	86
Problems	89
<b>8. Bohr's Model of the Hydrogen Atom</b>	91
8.1 Basic Principles of Spectroscopy	91
8.2 The Optical Spectrum of the Hydrogen Atom	93
8.3 Bohr's Postulates	96
8.4 Some Quantitative Conclusions	98
8.5 Motion of the Nucleus	100
8.6 Spectra of Hydrogen-like Atoms	102
8.7 Muonic Atoms	104
8.8 Excitation of Quantum Jumps by Collisions	106
8.9 Sommerfeld's Extension of the Bohr Model and the Experimental Justification of a Second Quantum Number	109
8.10 Lifting of Orbital Degeneracy by the Relativistic Mass Change	110
8.11 Limits of the Bohr-Sommerfeld Theory. The Correspondence Principle	111
8.12 Rydberg Atoms	112
Problems	114
<b>9. The Mathematical Framework of Quantum Theory</b>	117
9.1 The Particle in a Box	117
9.2 The Schrödinger Equation	121
9.3 The Conceptual Basis of Quantum Theory	123
9.3.1 Observations, Values of Measurements and Operators	123

9.3.2 Momentum Measurement and Momentum Probability .....	124
9.3.3 Average Values and Expectation Values .....	125
9.3.4 Operators and Expectation Values .....	128
9.3.5 Equations for Determining the Wavefunction .....	129
9.3.6 Simultaneous Observability and Commutation Relations .....	131
9.4 The Quantum Mechanical Oscillator .....	134
Problems .....	140
<b>10. Quantum Mechanics of the Hydrogen Atom .....</b>	<b>145</b>
10.1 Motion in a Central Field .....	145
10.2 Angular Momentum Eigenfunctions .....	147
10.3 The Radial Wavefunctions in a Central Field* .....	153
10.4 The Radial Wavefunctions of Hydrogen .....	155
Problems .....	161
<b>11. Lifting of the Orbital Degeneracy in the Spectra of Alkali Atoms .....</b>	<b>163</b>
11.1 Shell Structure .....	163
11.2 Screening .....	165
11.3 The Term Diagram .....	166
11.4 Inner Shells .....	171
Problems .....	171
<b>12. Orbital and Spin Magnetism. Fine Structure .....</b>	<b>173</b>
12.1 Introduction and Overview .....	173
12.2 Magnetic Moment of the Orbital Motion .....	174
12.3 Precession and Orientation in a Magnetic Field .....	176
12.4 Spin and Magnetic Moment of the Electron .....	178
12.5 Determination of the Gyromagnetic Ratio by the Einstein-de Haas Method .....	180
12.6 Detection of Directional Quantisation by Stern and Gerlach .....	181
12.7 Fine Structure and Spin-Orbit Coupling: Overview .....	183
12.8 Calculation of Spin-Orbit Splitting in the Bohr Model .....	184
12.9 Level Scheme of the Alkali Atoms .....	188
12.10 Fine Structure in the Hydrogen Atom .....	189
12.11 The Lamb Shift .....	190
Problems .....	193
<b>13. Atoms in a Magnetic Field: Experiments and Their Semiclassical Description .....</b>	<b>197</b>
13.1 Directional Quantisation in a Magnetic Field .....	197
13.2 Electron Spin Resonance .....	197
13.3 The Zeeman Effect .....	200
13.3.1 Experiments .....	200
13.3.2 Explanation of the Zeeman Effect from the Standpoint of Classical Electron Theory .....	202
13.3.3 Description of the Ordinary Zeeman Effect by the Vector Model .....	204
13.3.4 The Anomalous Zeeman Effect .....	206
13.3.5 Magnetic Moments with Spin-Orbit Coupling .....	207
13.3.6 The Paschen-Back Effect .....	209

13.3.7 Double Resonance and Optical Pumping .....	210
Problems .....	211
<b>14. Atoms in a Magnetic Field: Quantum Mechanical Treatment .....</b>	<b>213</b>
14.1 Quantum Theory of the Ordinary Zeeman Effect .....	213
14.2 Quantum Theoretical Treatment of the Electron and Proton Spins .....	215
14.2.1 Spin as Angular Momentum .....	215
14.2.2 Spin Operators, Spin Matrices and Spin Wavefunctions .....	216
14.2.3 The Schrödinger Equation of a Spin in a Magnetic Field .....	218
14.2.4 Description of Spin Precession by Expectation Values .....	220
14.3 Quantum Mechanical Treatment of the Anomalous Zeeman Effect with Spin-Orbit Coupling* .....	222
14.4 Quantum Theory of a Spin in Mutually Perpendicular Magnetic Fields, One Constant and One Time Dependent .....	226
14.5 The Bloch Equations .....	231
Problems .....	233
<b>15. Atoms in an Electric Field .....</b>	<b>235</b>
15.1 Observations of the Stark Effect .....	235
15.2 Quantum Theory of the Linear and Quadratic Stark Effects .....	237
15.2.1 The Hamiltonian .....	237
15.2.2 The Quadratic Stark Effect. Perturbation Theory Without Degeneracy* .....	238
15.2.3 The Linear Stark Effect. Perturbation Theory in the Presence of Degeneracy* .....	241
15.3 The Interaction of a Two-Level Atom with a Coherent Radiation Field .....	244
15.4 Spin- and Photon Echoes .....	247
Problems .....	250
<b>16. General Laws of Optical Transitions .....</b>	<b>251</b>
16.1 Symmetries and Selection Rules .....	251
16.1.1 Optical Matrix Elements .....	251
16.1.2 Examples of the Symmetry Behaviour of Wavefunctions .....	251
16.1.3 Selection Rules .....	256
16.1.4 Selection Rules and Multipole Radiation* .....	259
16.2 Linewidths and Lineshapes .....	262
<b>17. Many-Electron Atoms .....</b>	<b>267</b>
17.1 The Spectrum of the Helium Atom .....	267
17.2 Electron Repulsion and the Pauli Principle .....	269
17.3 Angular Momentum Coupling .....	270
17.3.1 Coupling Mechanism .....	270
17.3.2 <i>LS</i> Coupling (Russell-Saunders Coupling) .....	270
17.3.3 <i>jj</i> Coupling .....	274
17.4 Magnetic Moments of Many-Electron Atoms .....	276
17.5 Multiple Excitations .....	276
Problems .....	277

<b>18. X-Ray Spectra</b> .....	279
18.1 Introductory Remarks .....	279
18.2 X-Radiation from Outer Shells .....	279
18.3 X-Ray Bremsstrahlung Spectra .....	280
18.4 Emission Line Spectra: Characteristic Radiation .....	282
18.5 Fine Structure of the X-Ray Spectra .....	284
18.6 Absorption Spectra .....	286
18.7 The Auger Effect (Inner Photoeffect) .....	288
18.8 Photoelectron Spectroscopy (XPS), ESCA .....	290
Problems .....	290
<b>19. Structure of the Periodic System. Ground States of the Elements</b> .....	293
19.1 Periodic System and Shell Structure .....	293
19.2 Ground States of Atoms .....	300
19.3 Excited States and Complete Term Scheme .....	302
19.4 The Many-Electron Problem. Hartree-Fock Method*	303
19.4.1 The Two-Electron Problem .....	303
19.4.2 Many Electrons Without Mutual Interactions .....	306
19.4.3 Coulomb Interaction of Electrons. Hartree and Hartree-Fock Methods .....	307
Problems .....	310
<b>20. Hyperfine Structure</b> .....	313
20.1 Influence of the Atomic Nucleus on Atomic Spectra .....	313
20.2 Spins and Magnetic Moments of Atomic Nuclei .....	314
20.3 The Hyperfine Interaction .....	316
20.4 Hyperfine Structure in the Ground States of the Hydrogen and Sodium Atoms .....	320
20.5 Hyperfine Structure in an External Magnetic Field .....	321
20.6 Direct Measurements of Nuclear Spins and Magnetic Moments .....	325
20.7 The Nuclear Electric Quadrupole Moment .....	328
Problems .....	330
<b>21. The Laser</b> .....	331
21.1 Some Basic Concepts for the Laser .....	331
21.2 Rate Equations and Lasing Conditions .....	334
21.3 Amplitude and Phase of Laser Light .....	337
Problems .....	340
<b>22. Modern Methods of Optical Spectroscopy</b> .....	343
22.1 Classical Methods .....	343
22.2 Quantum Beats .....	344
22.3 Doppler-free Saturation Spectroscopy .....	346
22.4 Doppler-free Two-Photon Absorption .....	348
22.5 Level-Crossing Spectroscopy and the Hanle Effect .....	350
<b>23. Fundamentals of the Quantum Theory of Chemical Bonding</b> .....	353
23.1 Introductory Remarks .....	353
23.2 The Hydrogen-Molecule Ion $H_2^+$ .....	353

23.3 The Tunnel Effect .....	359
23.4 The Hydrogen Molecule H <sub>2</sub> .....	361
23.5 Covalent-Ionic Resonance .....	368
23.6 The Hund-Mulliken-Bloch Theory of Bonding in Hydrogen .....	369
23.7 Hybridisation .....	370
23.8 The $\pi$ Electrons of Benzene, C <sub>6</sub> H <sub>6</sub> .....	372
Problems .....	374
<b>Appendix</b> .....	<b>375</b>
A. The Dirac Delta Function and the Normalisation of the Wavefunction of a Free Particle in Unbounded Space .....	375
B. Some Properties of the Hamiltonian Operator, Its Eigenfunctions and Its Eigenvalues .....	379
<b>Bibliography of Supplementary and Specialised Literature</b> .....	<b>381</b>
<b>Subject Index</b> .....	<b>385</b>
<b>Fundamental Constants of Atomic Physics (Inside Front Cover)</b>	
<b>Energy Conversion Table (Inside Back Cover)</b>
