

CONTENTS

<i>Preface</i>	v
<i>Contents</i>	vii
<i>Contributors to Volume 2</i>	xi
1. Synchrotron radiation sources	1
<i>I.H. Munro and G.V. Marr</i>	
1. Introduction 3	
2. Synchrotron radiation sources in the soft X-ray (SXR) and vacuum ultraviolet (VUV) regions 6	
3. The prospects for increasing the brilliance of SR sources in the soft X-ray region 14	
4. Synchrotron radiation source installations 19	
References 20	
2. Optical engineering	21
<i>J.B. West and H.A. Padmore</i>	
1. Introduction 23	
2. The synchrotron radiation source 24	
3. Mirrors 35	
4. Diffraction grating optics 56	
5. Beam line layout 84	
6. Optical components 99	
7. Beam line auxiliary equipment 109	
8. Conclusion 116	
References 117	
3. Data aquisition and analysis systems	121
<i>P.A. Ridley</i>	
1. Introduction 123	
2. Data aquisition electronics 124	
3. Local computer systems 148	
4. Data processing facilities 157	
References 170	
4. High resolution spectroscopy of atoms and molecules including Faraday rotation effects	175
<i>J.P. Connerade and M.A. Baig</i>	
1. Introduction 177	
2. High resolution spectra of atoms 177	

3. High resolution spectra of molecules	212
4. SR experiments with polarised radiation	230
5. Conclusion	236
References	237
5. Resonances in molecular photoionization	241
<i>J.L. Dehmer, A.C. Parr and S.H. Southworth</i>	
1. Introduction	243
2. Shape resonances	245
3. Autoionization	263
4. Triply differential photoelectron measurements – experimental aspects	275
5. Case studies	280
6. Survey of related work	330
7. Prospects for future progress	334
Appendix. A bibliography on shape resonances in molecular photoionization through early 1985	336
References	342
6. Molecular photodissociation and photoionization	355
<i>I. Nenner and J.A. Beswick</i>	
1. General introduction	357
2. Experimental methods	361
3. Selected examples	382
4. Miscellaneous and future trends	455
References	458
7. Surface science with synchrotron radiation	467
<i>I.T. McGovern, D. Norman and R.H. Williams</i>	
1. Introduction	469
2. Techniques	469
3. Clean surfaces	476
4. Surfaces with adsorbates	500
5. Interfaces	521
6. Conclusions	533
References	533
8. Metal–semiconductor interface studies by synchrotron radiation techniques	541
<i>L.J. Brillson</i>	
1. Introduction	543
2. Metal–semiconductor interactions and electronic properties	544
3. Soft X-ray photoemission spectroscopy for microscopic interface characterization	547
4. Chemical bonding at metal–semiconductor interfaces	549
5. Metal–semiconductor interdiffusion	576
6. Fermi level pinning and semiconductor band bending	582

7. Other synchrotron radiation techniques for interface analysis	594
8. Conclusions and future directions	600
References	603
9. Inner shell photoelectron process in solids	611
<i>A. Kotani</i>	
1. Introduction	613
2. Fundamental theory of many-body effects in inner shell photoelectron process	614
3. Simple metals	623
4. Rare earth metals and compounds	627
5. Transition metals and compounds	639
6. Related topics	650
7. Concluding remarks	656
Appendix. Derivation of basic photoemission formulae	657
References	660
10. Surface core level shift	663
<i>Y. Jugnet, G. Grenet and Tran Minh Duc</i>	
1. Introduction	665
2. Surface–bulk core level shift for clean surfaces	666
3. Applications	693
4. Conclusion	718
References	719
11. Optical constants	723
<i>D.W. Lynch</i>	
1. Introduction	725
2. Definitions	726
3. Sample characteristics	738
4. Measurement methods	742
5. Summary	762
6. Some examples	764
7. Comments on data collections and recent literature	770
Appendix. Recent literature reference to optical data for $E \geq 6$ eV	772
References	775
<i>Author index</i>	785
<i>Subject index</i>	829
