

# CONTENTS

<i>Preface</i>	vii
<i>Contents</i>	ix
<i>Contributors to Volume 3</i>	xiii
<b>1. Storage ring optimization</b>	1
<i>H. Wiedemann</i>	
1. Introduction	3
2. Beam emittance and storage-ring lattices	11
3. Dynamic aperture	20
4. Optimum beam energy	26
5. Toward a diffraction-limited radiation source	28
References	36
<b>2. Synchrotron-radiation spectra</b>	37
<i>G. Brown and W. Lavender</i>	
1. Introduction and brief history	39
2. Radiation from a particle moving in instantaneously circular motion	40
3. Radiation from undulator magnets	43
4. Synchrotron radiation from real electron beams	53
5. Summary	54
Appendix A	55
Appendix B	56
References	60
<b>3. Perfect-crystal methods</b>	63
<i>T. Ishikawa and K. Kohra</i>	
1. Introduction	65
2. Features of dynamical X-ray diffraction	65
3. Multiple-crystal methods	75
4. Applications to topographic studies	76
References	103
<b>4. X-ray monochromators and mirrors</b>	105
<i>B.W. Batterman and D.H. Bilderback</i>	
1. Introduction	107
2. X-ray monochromators	107
3. X-ray mirrors	120
4. Multilayer optics	129
5. Heat loading effects on X-ray optical components	139
References	151

5. Powder diffraction . . . . .	155
<i>D.E. Cox</i>	
1. Introduction	157
2. Early experiments	159
3. Experimental techniques	160
4. Data analysis	169
5. Instrumental resolution	174
6. Intensity	183
7. Examples of experimental studies	189
8. Concluding remarks	196
References	198
6. Anomalous scattering . . . . .	201
<i>D.H. Templeton</i>	
1. Introduction	203
2. Optical theory	203
3. Typical properties	205
4. Sources of values	207
5. Instrumental details	210
6. Applications	212
7. X-ray dichroism and birefringence	215
8. Some final remarks	217
References	218
7. Surface crystallography . . . . .	221
<i>I.K. Robinson</i>	
1. Introduction	223
2. Diffraction from monolayers	224
3. Experimental techniques	231
4. Surfaces	242
5. Data collection	247
6. Data analysis	250
7. Conclusions	263
References	263
8. Microcrystal diffraction . . . . .	267
<i>W. Rieck and H. Schulz</i>	
1. Introduction	269
2. Fundamentals	269
3. Preparation of microcrystals	272
4. Methods for the search and measurement of weak reflections	273
5. Recent experiments and feasibility studies with microcrystals	276
6. Views on future experiments with microcrystals	287
References	290

9. Time-resolved studies . . . . .	291
<i>D.M. Mills</i>	
1. Introduction	293
2. The temporal properties of synchrotron radiation	294
3. Methodology of time-resolved experimentation	304
4. Future directions	331
References	333
10. Topography . . . . .	337
<i>J.-I. Chikawa and M. Kuriyama</i>	
1. Introduction	339
2. Basic principles and methods	340
3. Advantages of synchrotron radiation	349
4. X-ray optics	350
5. Imaging devices	357
6. Applications of synchrotron-radiation topography	362
7. Conclusion	370
Appendix A	370
References	375
11. Small-angle scattering . . . . .	379
<i>T.P. Russell</i>	
1. Introduction	381
2. Theory	382
3. Collimation	404
4. Detectors	415
5. Sample considerations	430
6. Data reduction	431
7. Smearing effects	435
8. Absolute intensity	436
9. Applications of SAXS	438
10. Resonant scattering	461
11. Summary	462
References	462
12. X-ray reflectivity studies of liquid surfaces . . . . .	471
<i>J. Als-Nielsen</i>	
1. Introduction	473
2. Reflectivity and density profile	473
3. Models	478
4. Experimental	484
5. Examples	491
References	503

13. Theoretical perspective . . . . .	505
<i>W.L. Schaich</i>	
1. Introduction	507
2. Basic derivation	508
3. Critique	516
References	530
14. Magnetic scattering . . . . .	535
<i>M. Brunel and F. de Bergevin</i>	
1. Introduction	537
2. The amplitude of scattering	539
3. The treatment of polarizations	540
4. Antiferromagnetism and helimagnetism	543
5. Diffraction by ferro- and ferrimagnetic compounds	553
6. Orbital moment	561
7. X-ray resonant magnetic scattering	561
8. Conclusion	562
References	563
15. Inelastic scattering by electronic excitations . . . . .	565
<i>W. Schülke</i>	
1. Introduction	567
2. Fundamentals of inelastic X-ray scattering	569
3. Inelastic X-ray scattering experiments	576
4. Instrumentation	602
5. A summary of previous inelastic-scattering experiments with synchrotron radiation	617
6. Prospect of further developments	632
References	634
16. X-ray fluorescent elemental analysis . . . . .	639
<i>V. Baryshev, G. Kulipanov and A. Skrinsky</i>	
Introduction	641
1. Review of experimental work	642
2. SRXFA schemes	647
3. Useful signal and basic components of the background in energy-dispersive SRXFA	653
4. The use of the specific features of SR for improving the XFA characteristics	667
5. The components of a SRXFA station	673
6. Element mapping	677
References	686
<i>Author Index</i>	689
<i>Subject Index</i>	717
