

CONTENTS

<i>Preface</i>	v
<i>Contents</i>	vii
<i>Contributors to Volume 4</i>	xiii
1. Synchrotron X-ray scattering studies of Langmuir films	1
<i>J. Als-Nielsen and H. Möhwald</i>	
1. Introduction 3	
2. Langmuir films 4	
3. Reflection and diffraction at grazing incidence 6	
4. Experimental examples 20	
5. Summary 43	
Appendix on X-ray optics 44	
References 51	
2. Coronary angiography project at the Photon Factory using a large monochromatic beam	55
<i>K. Hyodo, K. Nishimura and M. Ando</i>	
1. Introduction 57	
2. The light source and crystal optics 59	
3. Theory of image quality using image intensifiers 65	
4. The imaging system 70	
5. Digital image processing systems 79	
6. Discussion and proposal for a future system 89	
7. Summary 92	
References 93	
3. Optical and dielectric properties of materials relevant to biological research	95
<i>M.W. Williams, E.T. Arakawa and T. Inagaki</i>	
1. Introduction 97	
2. Early measurements of optical properties of biological materials 98	
3. Studies covering the oscillator strength of the valence electrons 109	
4. Studies covering the oscillator strength of all electrons 120	
5. Applications of complete optical spectra 130	
6. Summary 141	
References 141	

4. Crystal-structure analysis of biological macromolecules by synchrotron-radiation diffraction 147
H.D. Bartunik
1. Introduction 149
 2. Diffraction methods 151
 3. Data-acquisition facilities 164
 4. Data processing and evaluation 175
 5. Sample environment 179
 6. Applications: Static structures 183
 7. Applications: Structural dynamics and kinetics 187
 8. Future developments 190
- References 192
5. Fibre diffraction: Collagen 199
A. Bigi and N. Roveri
1. Introduction 201
 2. Collagen structure 201
 3. Instrumentation 208
 4. Results 209
 5. Conclusion 234
- References 234
6. Scattering from non-crystalline systems 241
M.H.J. Koch
- Introduction 243
1. X-ray scattering 243
 2. Experimental considerations 253
 3. Selected examples 259
 4. Conclusion 266
- References 267
7. Synchrotron radiation sources 269
W. Brefeld and P. Gürtler
1. Introduction 271
 2. From the source to the storage ring 271
 3. Important properties of storage rings for synchrotron radiation users 277
 4. Description of electron storage rings 281
 5. General properties of synchrotron radiation 283
 6. Synchrotron radiation sources in a storage ring 286
 7. Influence of the electron beam parameters on synchrotron radiation spectra 294
 8. Coherence properties of synchrotron radiation 294
- References 296

8. A Bragg reflection monochromator for synchrotron radiation angiography 297
G.S. Brown
1. Introduction 299
 2. Properties of synchrotron radiation 299
 3. General approach 300
 4. Bragg reflection optics 301
 5. Experimental set-up 303
 6. Improvements 304
 7. Summary 305
 - References 305
9. Trace element analysis by X-ray fluorescence 307
A. Iida and Y. Gohshi
1. Introduction 309
 2. Characteristics of XRF analysis using SR 310
 3. Analytical aspects of SR XRF 321
 4. XRF imaging 331
 5. Application of total X-ray reflection 343
 6. Concluding remarks 345
 - References 345
10. Medical applications of synchrotron radiation 349
J.C. Giacomini and H.J. Gordon
1. Introduction 351
 2. Medical uses of synchrotron radiation and iodine dichromography 352
 3. Summary 359
 - References 359
11. Microradiography and microtomography 361
W. Graeff and K. Engelke
1. Introduction 363
 2. Theoretical considerations on microradiography and microtomography 364
 3. Instrumentation 378
 4. Examples of application 385
 5. Future prospects of microradiography and microtomography 401
 - References 402
12. NIKOS – non-invasive angiography at HASYLAB 407
W. Graeff and W.-R. Dix
1. Introduction 409
 2. Parameters for NIKOS 410
 3. Experimental set-up 418
 4. Projection angles 427
 - Note added in proof 429
 - References 429

13. Radiobiological experiments in the X-ray region with synchrotron radiation 431
K. Hieda and T. Ito
1. Introduction 433
 2. An overview of the status prior to use of SR as an X-ray source 433
 3. Irradiation systems with SR at the Photon Factory 438
 4. Characterization of monochromatic X-rays extracted from SR 447
 5. Radiobiological experiments 452
 6. Supporting facilities for radiobiological experiments 462
 7. Concluding remarks 462
- References 463
14. Synchrotron radiation for angiography, an overview 467
E. Rubenstein and R. Hofstadter
1. Introduction 469
 2. Brief description of items to produce best possible images 473
- References 478
15. X-ray microscopy 481
G. Schmahl and P.-C. Cheng
1. Introduction 483
 2. Contrast mechanism in X-ray microscopy 483
 3. X-ray optics 492
 4. X-ray microscopes (XM) and scanning X-ray microscopes (SXM) 500
 5. Other types of X-ray imaging 512
- References 530
16. UV spectroscopy 537
E.S. Stevens
1. Introduction 539
 2. Circular dichroism (CD) 539
 3. Fluorescence 543
 4. Conclusions 551
- References 552
17. Anomalous X-ray scattering 555
H.B. Stuhrmann, G. Goerigk, and B. Munk
1. Introduction 557
 2. The basic scattering functions of contrast variation and difference Fourier maps 560
 3. Instruments 561
 4. Anomalous X-ray small-angle scattering from solutions 567
 5. Anomalous scattering from metallic alloys 568
 6. Anomalous diffraction from multilayers 572
 7. Anomalous diffraction from sulfur in purple membrane 573

8. Single crystals of macromolecules	578
9. Conclusion	579
References	580
18. Detectors for angiography	581
<i>A. Thompson</i>	
1. Introduction	583
2. Basic detector properties	584
3. Conclusions	594
References	595
19. Progress in X-ray synchrotron diffraction studies of muscle contraction	597
<i>K. Wakabayashi and Y. Amemiya</i>	
1. Introduction	599
2. Structure of vertebrate striated muscles	600
3. General aspects of muscle contraction	605
4. X-ray diffraction of muscles	607
5. Experimental techniques with synchrotron X-ray diffraction	613
6. Dynamic X-ray diffraction during muscle contraction	624
7. Prospects of synchrotron X-ray studies	665
8. Concluding remarks	673
References	674
20A. Imaging apparatus and techniques for synchrotron radiation angiography	679
<i>H.D. Zeman</i>	
1. Experimental apparatus	681
2. Experimental method	692
References	696
20B. The processing of intravenous coronary angiograms produced by synchrotron radiation	697
<i>H.D. Zeman</i>	
1. Introduction	699
2. Algorithm definition and programming techniques	702
3. Experimental results	703
4. Conclusions	716
References	717
<i>Author index</i>	719
<i>Subject index</i>	755
