|--|-----------|
| Introduction | 1 |
| Direct reactions | 17 |
| <i>N. Austern</i> | |
| Introduction | 17 |
| 1. Wave packets | 20 |
| 2. Distorted waves | 24 |
| 3. Zero-range approximation - Qualitative results - Surface reactions | 29 |
| 4. Poles - High energy | 42 |
| 5. Adiabatic theory - Compromise method | 46 |
| 6. Coupled channels | 55 |
| 7. Spectroscopy: Coherence, parentage | 62 |
| 8. Exchange and recoil effects | 71 |
| 9. Relation between DI and CN | 76 |
| References | 82 |
| Dispersion theory of direct nuclear reactions | 85 |
| <i>I. S. Shapiro</i> | |
| 1. Introduction | 85 |
| 1.1. Difficulties of the old theory | 85 |
| 1.2. Distinctive feature of direct nuclear reactions | 86 |
| 1.3. Analyticity of amplitudes and Feynman graphs | 87 |
| 1.4. Amplitude singularities and types of nuclear reactions | 89 |
| 1.5. Immediate problems on hand | 92 |
| 2. Singularities of Feynman graphs | 93 |
| 2.1. Certain mathematical theorems | 93 |
| 2.2. Two examples | 95 |
| 2.3. Unitarity conditions | 98 |
| 2.4. Pole graphs | 100 |
| 2.5. The variables s , t and u | 103 |
| 2.6. Amplitude poles with respect to the variables s , t , u | 104 |
| 3. Singularities of Feynman graphs (cont'd) | 106 |
| 3.1. Two-particle intermediate states | 106 |
| 3.2. Graphs for two-particle intermediate states | 106 |
| 3.3. Feynman integral | 108 |
| 3.4. Certain properties of Feynman integral singularities | 112 |
| 4. Triangle graph | 113 |
| 4.1. Triangle graph amplitude | 113 |
| 4.2. Position of triangle singularities for specific reactions | 117 |
| 4.3. Concluding remarks | 119 |
| Appendix to chapter 4: Derivation of triangle graph amplitude from unitarity condition | 121 |
| 5. Amplitude vertex parts of direct nuclear processes | 125 |
| 5.1. Definition of vertex part | 125 |
| 5.2. Vertex part in single-particle model | 126 |
| 5.3. Vertex part singularities | 129 |
| 5.4. Reduced vertex parts | 133 |
| 6. Knock-out reaction | 138 |
| 6.1. Kinematic problems | 138 |
| 6.2. Movement of singularities | 139 |
| 6.3. Knock-out of complex particles | 141 |
| 7. Interaction in initial and final states | 145 |
| 7.1. Distorted waves method | 145 |
| 7.2. Graphs taking into account the interactions in the initial and final states | 147 |

| | |
|---|-----|
| 7.3. Omnes-Muskhelishvili equation | 148 |
| 7.4. Solution of the Omnes-Muskhelishvili equation | 151 |
| References..... | 154 |
| The nuclear shell model and its relation with other nuclear models | 157 |
| <i>J.P. Elliott</i> | |
| 1. An introduction to shell model calculations | 157 |
| 2. The use of group theory | 160 |
| 2.1. The symmetric group S_k | 162 |
| 2.2. The unitary group | 166 |
| 3. Classification of many-body wave functions | 170 |
| 3.1. Multiplets and supermultiplets | 170 |
| 3.2. The l^k configuration | 173 |
| 3.3. The j_k configuration | 176 |
| 3.4. Mixing of configurations | 180 |
| 4. The group U_3 and the appearance of rotations | 183 |
| 4.1. The U_3 classification | 185 |
| 4.2. Comparison with shell-model eigenfunctions | 186 |
| 4.3. The quadrupole force | 187 |
| 4.4. A Cartesian basis | 188 |
| 4.5. A projection integral | 189 |
| 4.6. Quadrupole moments | 191 |
| 4.7. Central-force matrix elements | 192 |
| 4.8. Discussion of the central-force formula | 195 |
| 5. Application to nuclei in the ds -shell | 196 |
| 5.1. The spectrum of Mg^{24} | 198 |
| 5.2. Even parity levels of even-even nuclei | 198 |
| 5.3. Odd parity levels of even-even nuclei | 199 |
| 5.4. Odd nuclei | 202 |
| 6. Concluding remarks | 204 |
| Appendix | 206 |
| References | 207 |
| Electromagnetic properties of atomic nuclei | 209 |
| <i>A. de-Shalit</i> | |
| Introduction | 209 |
| 1. The nuclear wave function | 210 |
| 2. The current operator | 211 |
| 3. The central field approximation | 213 |
| 4. Generalized moments | 214 |
| 5. Example - The proton $f_{7/2}$ shell | 216 |
| 6. Corrections to multipole moments | 222 |
| 7. Magnetic dipole | 225 |
| 8. Core excitations in odd- A nuclei | 227 |
| 9. General theorems on magnetic moments | 228 |
| 10. Comparison of different moments | 230 |
| References | 232 |
| Effect of superconducting pairing correlations on nuclear properties | 233 |
| <i>V. G. Soloviev</i> | |
| Introduction | 233 |
| 1. New variational principle as a generalization of the Hartree-Fock method | 233 |
| 2. Pairing nucleon correlations in atomic nuclei | 237 |
| 2.1. Basic approximation | 237 |
| 2.2. Condition for existence of neutron-proton pairing correlations | 240 |

| | |
|--|-----|
| 2.3. Superfluid properties of medium and heavy nuclei | 243 |
| 3. Superfluid nuclear model | 245 |
| 3.1. Formulation of the model | 245 |
| 3.2. Pairing energy and single-particle levels of odd A-nuclei | 248 |
| 3.3. Investigation of the accuracy of the calculations and the choice of parameters | 252 |
| 3.4. The blocking effect | 260 |
| 4. Effect of pairing correlations on the probabilities of α , β and γ -transitions | 266 |
| 4.1. Effect of pairing correlations on the α -decay rates | 266 |
| 4.2. Superfluid corrections and additional classification of β -transition probabilities | 271 |
| 4.3. Superfluid corrections to the probabilities of γ -transitions | 275 |
| 5. Properties of the ground and excited states of strongly deformed nuclei | 276 |
| 5.1. The nature of the ground and excited states of odd A-nuclei | 276 |
| 5.2. Two-quasi-particle aspect of the excited states of even-even nuclei | 279 |
| References | 282 |
| Some aspects of collective properties of nuclei | 291 |
| <i>S. T. Belyaev</i> | |
| 1. Introduction and basic equations | 291 |
| 1.1. Introduction | 291 |
| 1.2. Methods for the consideration of pairing correlation | 292 |
| 1.3. Basic equations of generalized Hartree-Fock method | 294 |
| 1.4. Perturbation theory | 296 |
| 1.5. Time-dependent self-consistent field | 299 |
| 2. The equilibrium shape of nuclei | 299 |
| 2.1. Formulation of the problem | 299 |
| 2.2. Choice of nucleon-nucleon interaction | 300 |
| 2.3. Equations defining the equilibrium deformation | 301 |
| 2.4. Some general conclusions | 302 |
| 2.5. The region of small deformations | 303 |
| 2.6. The region of large deformations ($\delta R/R \gg \Delta/\epsilon_F$) | 305 |
| 2.7. Phase transition from spherical to deformed nuclei | 307 |
| 3. Do γ -deformed nuclei exist? | 309 |
| 3.1. Calculations in harmonic oscillator model | 309 |
| 3.2. Improved oscillator model | 312 |
| 3.3. System with two types of nucleons | 314 |
| 4. The rotation of deformed nuclei. Moment of inertia | 316 |
| 4.1. Formulation of the problem | 316 |
| 4.2. General expression for moment of inertia | 317 |
| 4.3. Estimation of the basic term $\mathcal{J}^{(1)}$ | 318 |
| 4.4. Hydrodynamical limit and gauge invariance | 320 |
| 4.5. Estimation of the term $\mathcal{J}^{(2)}$ | 321 |
| 5. Vibrations of deformed nuclei | 322 |
| 5.1. Model with quadrupole interaction | 322 |
| 5.2. Effect of the gauge-invariant pairing interaction | 327 |
| 5.3. Critical analysis of the results | 329 |
| 6. Structure of the nucleon-nucleon interaction. Vibrations of spherical nuclei | 331 |
| 6.1. Expansion of the interaction potential in pairing states with a definite angular momentum | 331 |
| 6.2. Connection between the expansion coefficients in the asymptotic approximation | 333 |
| 6.3. Short summary and generalization of the results | 336 |
| 6.4. Vibrations of spherical nuclei | 338 |
| References | 340 |

| | |
|--|------------|
| Weak interactions amongst nucleons and leptons..... | 343 |
| <i>H.A. Tolhoek</i> | |
| 1. Introduction | 343 |
| 2. Generalities on four-fermion interactions; the two-component neutrino theory | 344 |
| 2.1. CPT Theorem | 345 |
| 2.2. Transformation for space reflection P | 345 |
| 2.3. Transformation for time reversal T | 346 |
| 2.4. Transformation for charge conjugation C | 347 |
| 2.5. The Pauli-Pursey transformations and the conditions for invariance under C, P and T | 348 |
| 2.6. The two-component neutrino theory | 349 |
| 3. Beta-radioactivity | 351 |
| 3.1. Introduction | 351 |
| 3.2. "Classical" phenomena of beta radioactivity | 352 |
| 3.3. Directional distribution of β-rays from oriented nuclei | 359 |
| 3.4. The β, γ-circular polarization correlation | 365 |
| 3.5. The polarization of electrons emitted in β-emission | 368 |
| 3.6. Summary of some formulae for β-radioactivity..... | 374 |
| 3.7. The experimental situation in β-radioactivity..... | 378 |
| 4. Muon decay | 380 |
| 5. Universal four-fermion interaction: The proposal for a universal V-A interaction .. | 383 |
| 6. The theory of the conserved vector current: The pseudoscalar in β-decay | 389 |
| 6.1. The hypothesis of the conserved vector current | 389 |
| 6.2. Experimental evidence for the conserved vector current theory | 392 |
| 6.3. The axial vector current | 396 |
| 6.4. The pseudoscalar in β-decay | 397 |
| 7. Muon capture | 399 |
| 7.1. Introduction | 399 |
| 7.2. The coupling constants for muon capture: an effective Hamiltonian | 402 |
| 7.3. The application of the closure method to a statistical model | 409 |
| 7.4. Shell model calculations for total capture rates | 414 |
| 7.5. Muon capture in hydrogen | 417 |
| 7.6. Comparison of pion decay into electrons and muons | 418 |
| 7.7. The hyperfine structure effect and isotope effects in muon capture | 419 |
| 7.8. Partial muon capture rate in C^{12} | 422 |
| 7.9. Partial transitions in O^{16} and the pseudoscalar interaction | 423 |
| 7.10. The angular distribution of recoil nuclei and of emitted neutrons | 424 |
| 7.11. Radiative muon capture: spectrum; directional distribution of the photons-circular polarization of the photons [60] [97] [98] [99]..... | 425 |
| 8. Neutrino processes: The hypothesis of an intermediate vector boson; are there two kinds of neutrino? | 427 |
| 8.1. Generalization to processes of types III and IV with a change of strangeness S | 429 |
| 8.2. The hypothesis of an intermediate vector boson | 430 |
| 8.3. γ-decay of the muon | 433 |
| 8.4. Experiment Brookhaven | 435 |
| Appendix I Notations for the Dirac equation and the Dirac matrices | 436 |
| Appendix II The use of field operators or wave functions in the formulation of four-fermion interactions..... | 440 |
| Appendix III The projection operators D | 441 |
| Appendix IV The isospin of nucleon and pion | 442 |
