CONTENTS

PREFACE TO THE FIRST EDITION v

PREFACE TO THE SECOND EDITION xi

CHAPTER 1 GENERAL PRINCIPLES 1

1–1 The natural unit system 1
1–2 Some fundamental notions of the special theory of relativity . 2
1–3 Some basic notions of quantum mechanics 5
1–4 Localizability 7
1–5 Observables of a field 8
1–6 Canonical transformations 10
1–7 Lorentz transformations as canonical transformations . . . 11
1–8 The action principle 14
1–9 The equation of motion 18
1–10 Momentum operators 19
1–11 Conservation laws 20
1–12 Commutation rules 22

CHAPTER 2 THE RADIATION FIELD 25

2–1 The classical field equations 25
2–2 The associated boundary value problem 27
2–3 A Lagrangian for the radiation field 28
2–4 Quantization of the radiation field 28
2–5 Momentum operators for the radiation field 31
2–6 Plane wave decomposition of the radiation field 35
2–7 Explicit representations of the field operators 37
2–8 The spin of the photon 40
2–9 Definition of the vacuum 47

CHAPTER 3 RELATIVISTIC THEORY OF FREE ELECTRONS 50

3–1 The field equations for the one-particle problem 50
3–2 The associated boundary value problem 51
3–3 Relativistic invariance of the field equations 52
3–4 The bilinear covariants 53
3–5 A Lagrangian for the spinor field 56
3–6 Quantization 56
3–7 Momentum operators 59
3–8 Plane wave decomposition 60
3–9 Explicit representation of the field operators 65
3–10 The definition of the vacuum 67

CHAPTER 4 INTERACTION OF RADIATION WITH ELECTRONS 69

4–1 The field equations 69

4–2 Commutation rules for the interacting fields 73
4–3 The interaction picture 76
4–4 Measurability of the fields 78

CHAPTER 5 INVARIANCE PROPERTIES OF THE COUPLED FIELDS . . . 82
5–1 Proper Lorentz transformations 82
5–2 Gauge transformations 83
5–3 Space inversion 86
5–4 Time inversion 88
5–5 Charge conjugation 94
5–6 Scale transformations 96

CHAPTER 6 SUBSIDIARY CONDITION AND LONGITUDINAL FIELD . . . 97
6–1 The covariant Coulomb interaction 97
6–2 The subsidiary condition and the construction of the state vector 100
6–3 The Gupta method 103
6–4 Gauge-independent interaction 110
6–5 Radiation fields with finite mass 113

CHAPTER 7 THE S-MATRIX 117
7–1 Preliminary definition of the *S*-matrix 117
7–2 The wave matrix 120
7–3 The wave operator 126
7–4 Integral representation of the wave operator 129
7–5 Definition of the *S*-matrix 131
7–6 Invariance properties of the *S*-matrix 136

CHAPTER 8 EVALUATION OF THE *S*-MATRIX 144
8–1 The iteration solution 144
8–2 The Feynman-Dyson diagrams 146
8–3 Diagrams in momentum space 151
8–4 Closed loops 159
8–5 The substitution law 161
8–6 Lifetimes and cross sections 163
8–7 Evaluation of the *S*-matrix in the Heisenberg picture . . 167

CHAPTER 9 THE DIVERGENCES IN THE ITERATION SOLUTION . . . 170
9–1 Historical background 171
9–2 Classification of divergences 173
9–3 The vacuum fluctuations 176
9–4 The self-energy of the electron 178
9–5 The self-energy of the photon 188
9–6 The vertex part 197

CHAPTER 10 RENORMALIZATION 203
10–1 The primitive divergences 203
10–2 Irreducible and proper diagrams 206

10–3 Separation of divergences in irreducible parts 210
10–4 Separation of divergences in reducible parts 211
10–5 Mass renormalization 219
10–6 Charge renormalization 219
10–7 Wave function renormalization 221
10–8 Sufficiency proof 222
10–9 Regulators 223

CHAPTER 11 THE PHOTON-ELECTRON SYSTEM 228
11–1 Compton scattering 229
11–2 Double Compton scattering 235
11–3 Radiative corrections to Compton scattering 241
11–4 Pair production in photon-electron collisions 247

CHAPTER 12 THE ELECTRON-ELECTRON SYSTEM 252
12–1 Møller scattering 252
12–2 Bhabha scattering 257
12–3 Bremsstrahlung in electron-electron collisions 261
12–4 Annihilation of free negaton-positon pairs 263
12–5 Positronium; selection rules 274
12–6 Positronium annihilation 282

CHAPTER 13 THE PHOTON-PHOTON SYSTEM 287
13–1 Photon-photon scattering as part of a diagram 287
13–2 Photon-photon scattering cross sections 292
13–3 Pair production in photon-photon collision 299

CHAPTER 14 THEORY OF THE EXTERNAL FIELD 302
14–1 The external field approximation 303
14–2 The bound interaction picture 306
14–3 Commutation rules 308
14–4 The electron propagation function 312
14–5 The *S*-matrix in the external field approximation . . . 318
14–6 Renormalization 321
14–7 Cross sections and energy levels 322

CHAPTER 15 EXTERNAL FIELD PROBLEMS 327
15–1 Coulomb scattering 327
15–2 Radiative corrections to Coulomb scattering 332
15–3 The magnetic moment of the election 342
15–4 Energy levels in hydrogen-like atoms 345
15–5 Radiative transitions between bound states 361
15–6 Bremsstrahlung 364
15–7 Pair production and annihilation 373
15–8 Delbrück and Rayleigh scattering 379

CHAPTER 16 SPECIAL PROBLEMS 390
16–1 The infrared divergences 390

16–2 Radiation damping in collision processes 405
16–3 The natural line width of stationary states 408
16–4 The self-stress of the electron 410
16–5 Outlook 415

MATHEMATICAL APPENDIX

APPENDIX A1 THE INVARIANT FUNCTIONS 419
A1–1 The homogeneous delta-functions 420
A1–2 The inhomogeneous delta-functions 420
A1–3 Relations between the Δ-functions 421
A1–4 Integral representations 423
A1–5 Explicit expressions 424
A1–6 The S-functions 424

APPENDIX A2 THE GAMMA-MATRICES 425
A2–1 Various representations 425
A2–2 The matrices A, B, and C 429
A2–3 The amplitudes of the plane wave solutions 431
A2–4 A theorem on the traces of γ-matrices 436
A2–5 Spin sums 438
A2–6 Polarization sums 439

APPENDIX A3 A THEOREM ON THE REPRESENTATION OF THE EXTENDED LORENTZ GROUP BY IRREDUCIBLE TENSORS 441

APPENDIX A4 THE ORDERING THEOREM 445
A4–1 The ordering theorem for commuting fields 445
A4–2 The ordering theorem for anticommuting fields . . . 449
A4–3 A generalization of the ordering theorem 451
A4–4 The ordering of chronological products 451

APPENDIX A5 ON THE EVALUATION OF CERTAIN INTEGRALS . . . 454
A5–1 Convergent integrals 455
A5–2 Divergent integrals 457
A5–3 The integral for the photon self-energy part 460
A5–4 The integral for the electron self-energy part 463

APPENDIX A6 A LIMITING RELATION FOR THE δ-FUNCTION . . . 464

APPENDIX A7 THE METHOD OF ANALYTIC CONTINUATION . . . 465
A7–1 The Bohr-Peierls-Placzek relation 465
A7–2 The principle of limiting distance 468
A7–3 The fundamental theorem on analytic continuation . . . 469
A7–4 Applications 473

APPENDIX A8 NOTATION 476

Supplement for the Second Edition

SUPPLEMENT S1 FORMULATIONS OF QUANTUM ELECTRODYNAMICS . . 479
S1–1 Lagrangian QFT 480
S1–2 Axiomatic QFT 481
S1–3 Locality, covariance, and indefinite metric 483
S1–4 Lehmann–Symanzik–Zimmermann and related formalisms . . 486
S1–5 Null plane QED 490
References 492

SUPPLEMENT S2 RENORMALIZATION 496
S2–1 Dyson–Salam–Ward renormalization 496
S2–2 Bogoliubov–Parasiuk–Hepp–Zimmermann renormalization . . 499
S2–3 Analytic renormalization 501
References 502

SUPPLEMENT S3 COHERENT STATES 503
S3–1 A finite number of degrees of freedom 503
S3–2 Coherent states of the radiation field 506
S3–3 Application to ordering theorems 509
References 511

SUPPLEMENT S4 INFRARED DIVERGENCES 513
S4–1 Dollard's discovery 513
S4–2 A new picture 514
S4–3 The asymptotically modified fields 519
S4–4 The new S-matrix 525
References 529

SUPPLEMENT S5 PREDICTIONS AND PRECISION EXPERIMENTS . . . 530
S5–1 The anomalous magnetic moment 530
S5–2 The hyperfine structure of the hydrogen ground state . . 531
S5–3 The Lamb–Retherford shift in hydrogen 533
S5–4 Energy levels in positronium 535
S5–5 Muonium hyperfine structure 536
References 537
