
Contents

1. Introduction	1
1.1 Nuclear Orientation	1
1.2 Dynamic Nuclear Orientation	4
1.3 Generalizations	8
2. Energy Levels and Magnetic Resonance	11
2.1 Nuclear Zeeman Interaction	11
2.2 Nuclear Quadrupole Interactions	18
2.3 Paramagnetic Ions and Hyperfine Interactions	18
2.4 Electrons and Nuclei in Dipolar Coupling	25
2.5 Examples	28
3. Electron Spin-Lattice Relaxation	33
3.1 Review of Theory for Rare Earth Ions	34
a. The Direct Process	36
b. The Orbach Process	40
c. The Raman Process	42
3.2 The Phonon Bottleneck	45
3.3 Measurements on Rare Earth Salts	50
3.4 Iron Group Ions	62
3.5 Microwave Hypersonics	64
4. Nuclear Spin-Lattice Relaxation	71
4.1 Relaxation by Paramagnetic Impurities	71
a. Theory	71
b. Measurements	77
4.2 Quadrupole Relaxation	81
4.3 Relaxation in Metals	82

5. Dynamic Orientation with Strong Hyperfine Coupling	85
5.1 General Considerations	85
5.2 Techniques and Apparatus	98
5.3 Experimental Results: Orientation of Radionuclei	102
6. The Overhauser Effect	111
6.1 General Considerations	111
6.2 Experimental Results	115
7. Dynamic Orientation Through Nuclear-Electron Dipolar Coupling	121
7.1 General Theoretical Considerations	122
a. Simple Model	123
b. Unresolved Spectra	134
c. Diffusion Effects	136
7.2 Experimental Results	139
a. Ce^{3+} in $\text{La}_2\text{Mg}_3(\text{NO}_3)_{12}\cdot 24\text{H}_2\text{O}$	139
b. Nd^{3+} in $\text{La}_2\text{Mg}_3(\text{NO}_3)_{12}\cdot 24\text{H}_2\text{O}$	144
c. Other Samples	147
8. Polarized Proton Targets	155
8.1 General Considerations	155
8.2 Nuclear Aspects	159
8.3 Apparatus	160
9. Other Nonstatic Methods	167
9.1 Rotational Nuclear Cooling	167
9.2 Hot Conduction Electrons	171
Index	175
