PREFACE

vii

1. Relationship of Microdosimetric Techniques to Applications in Biological Systems

Dudley T. Goodhead

I. Introduction	1
II. Qualitative Comparison of Main Approaches to Microdosimetry	7
III. Linear Energy Transfer	9
IV. Proportional Counter Microdosimetry	23
V. Track Profiles and Track Entities	47
VI. Track Structure Simulation	54
VII. Microdosimetry of Internal Radionuclides	69
References	78

2. Neutron Spectroscopy

William G. Cross and Harry Ing

I. Introduction	91
II. General Characteristics of Spectrometers	95
III. Description of Spectrometers	98
IV. Neutron Spectrum Unfolding Methods	129
V. Calibration of Spectrometers	137
VI. Characteristic Neutron Spectra and Their Measurement	142
VII. Future Prospects	157
References	157

3. Ionization Chambers

J. W. Boag

I. Introduction	169
II. Basic Principles of Small-Cavity Chambers	170
III. Charge Collection in an Ionization Chamber	175

IV. General Design Considerations	212
V. Special Types of Ionization Chambers	222
References	234

4. Advances in Calorimetry for Radiation Dosimetry

Steve R. Domen

I. Introduction	245
II. Basics	249
III. Operational Efficiency	269
IV. NBS Absorbed Dose Graphite Calorimeter	272
V. A-150 Plastic Calorimeter	287
VI. Absorbed Dose Water Calorimeter	291
VII. Polystyrene--Water Calorimeter	304
VIII. Total Absorption Calorimetry	308
IX. Trends	312
References	314

5. External Beta-Photon Dosimetry for Radiation Protection

Ronald L. Kathren

I. Introduction	321
II. Selection of Dosimeters	324
III. Evaluation of the Occupational Radiation Environment	326
IV. Types of Dosimeters	333
V. From Dosimeter to Personnel Dose	359
VI. Calibration and Standardization	361
References	363

INDEX	371
