PREFACE . . . . .	v
ELECTROMAGNETIC ISOTOPE SEPARATORS OF SMALL AND MEDIUM SIZE AND THEIR APPLICATION IN LABORATORIES FOR NUCLEAR RESEARCH by J. KOCH . . . . .	1
CHAPTER I. INTRODUCTION . . . . .	2
CHAPTER II. EARLY EXPERIMENTS ON ELECTROMAGNETIC SEPARATION OF ISOTOPES OF NATURAL OCCURRENCE . . . . .	6
1. Historical Remarks . . . . .	6
2. The Isotope Separator of Oliphant, Shire and Crowther . . . . .	7
3. The Isotope Separator of Smythe, Rumbaugh and West . . . . .	11
4. The Isotope Separator of Walcher . . . . .	15
5. The Separation of Uranium Isotopes in Small Quantities by Means of Mass Spectrometric Techniques . . . . .	21
CHAPTER III. FIRST EXPERIMENTS ON ELECTROMAGNETIC SEPARATION OF ARTIFICIAL RADIOACTIVE ISOTOPES . . . . .	23
1. Introductory Remarks . . . . .	23
2. The Analysis of Pile Induced Activities by the Goup at Chicago . . . . .	24
3. The Analysis of Cyclotron Induced Activities by the Group at Berkeley . . . . .	30
CHAPTER IV. RECENT DEVELOPMENT OF LABORATORY ISOTOPE SEPARATORS FOR THE PREPARATION OF STABLE AND RADIOACTIVE SAMPLES FOR NUCLEAR RESEARCH . . . . .	33
1. Introductory Remarks . . . . .	33
2. The Isotope Separator in Marburg . . . . .	35
3. The Isotope Separators in Copenhagen, Stockholm, Uppsala and Gothenburg . . . . .	42
4. The Isotope Separator in Saclay . . . . .	82
5. Other Laboratory Separators . . . . .	95
REFERENCES . . . . .	96
LARGE ELECTROMAGNETIC ISOTOPE SEPARATORS USED FOR PRODUCTION by R.H.V.M. DAWTON and M.L. SMITH . . . . .	101
CHAPTER V. HISTORY OF THE UNITED STATES AND BRITISH PROJECTS .	102
CHAPTER VI. BRIEF DESCRIPTION OF THE 180° PRODUCTION SEPARATOR	109
1. The Single Separator Unit . . . . .	109
2. The American Uranium Plant . . . . .	116
3. The Amsterdam Separator . . . . .	119
4. Electromagnetic Separation in the U.S.S.R. . . . .	120

<b>CHAPTER VII. DETAILED DESCRIPTION OF THE LARGE 180° SEPARATOR .</b>	<b>121</b>
1. Vacuum System . . . . .	121
2. Ion Source . . . . .	127
3. Collectors . . . . .	137
4. Electrical Circuits and Magnet. . . . .	143
<b>CHAPTER VIII. THE HARWELL 90° SECTOR SEPARATOR FOR ACTIVE MATERIALS .</b>	<b>150</b>
1. Machine Design . . . . .	150
2. Ion Sources . . . . .	153
3. Ion Receivers . . . . .	160
<b>CHAPTER IX. OPERATIONAL EXPERIENCE IN THE ELECTROMAGNETIC SEPARATION OF ISOTOPES .</b>	<b>166</b>
1. The Permanent Gases and Carbon: Ne, A, Kr, Xe, N, O, C . . . . .	166
2. The Alkali and Alkaline Earth Metals: Li, K, Rb, Ca, Sr, Ba, and Mg . . . . .	168
3. The Common Metals: Cu, Ag, Be, Zn, Cd, In, Tl, Sb, Sn, Pb, V, Cr, Fe, Ni, and Ga . . . . .	170
4. Elements with very Volatile Chlorides: B, Si, Ti, Ge, Zr, Hf, Ta, Mo, and W . . . . .	171
5. Mercury . . . . .	172
6. Sulphur and its Congeners and the Halogens: S, Se, Te, Cl, Br . . . . .	172
7. The Lanthanides: La, Ce, Nd, Sm, Eu, Gd, Dy, Er, Yb, Lu . . . . .	173
8. Platinum Group Metals: Pt, Ru, Pd, Ir . . . . .	176
9. The Actinides: Th, U, Pu . . . . .	176
10. Inventory of Isotopes: Approximate Amounts Available and Costs	177
<b>CHAPTER X. CHEMICAL ASPECTS OF SEPARATOR OPERATION .</b>	<b>180</b>
1. Source Material . . . . .	180
2. Isotope Recovery and Processing . . . . .	181
<b>CHAPTER XI. APPLICATIONS OF ELECTROMAGNETICALLY ENRICHED STABLE ISOTOPES .</b>	<b>184</b>
1. Introduction . . . . .	184
2. Energy Level and Scattering Studies . . . . .	186
3. Neutron Cross-Sections . . . . .	189
4. New and Questioned Isotopes . . . . .	193
5. Study of Naturally Occurring Radio-Isotopes . . . . .	194
6. Preparation of High Activity Radio Tracers . . . . .	195
7. Solid State Physics . . . . .	196
8. Spectroscopic Studies . . . . .	197
9. Isotope Dilution Analysis . . . . .	201
Acknowledgements . . . . .	201
REFERENCES . . . . .	202
<b>GENERAL TREATMENT OF SOME PROBLEMS RELATED TO THE DESIGN OF MODERN ISOTOPE SEPARATORS by W. WALCHER .</b>	<b>207</b>
<b>INTRODUCTION .</b>	<b>208</b>
<b>CHAPTER XII. MASS ANALYSING FIELD SYSTEMS .</b>	<b>209</b>
1. Mass Dispersion and Resolving Power of Magnetic Fields . . . . .	209
2. Image Aberrations and their Elimination . . . . .	213
3. Elimination of Image Aberrations in the Calutron by Magnetic Shims . . . . .	220
4. Electrostatic Methods for the Elimination of Image Aberrations in the Calutron . . . . .	227

## CONTENTS

XI

CHAPTER XIII. THE PRODUCTION OF HIGH CURRENT ION BEAMS . . . . .	230
1. The Ionisation of a Gas by Electrons . . . . .	231
2. The Arc Discharge with Hot Cathode . . . . .	234
3. The Extraction of Ions from an Ionisation Chamber and the Formation of Beams of a Given Shape. . . . .	240
4. Arc Discharge in a Magnetic Field. . . . .	258
5. Optimum Conditions . . . . .	270
CHAPTER XIV. SPACE CHARGE NEUTRALISATION IN ION BEAMS . . . . .	275
1. The Influence of Space Charges on the Shape of Ion Bundles. .	275
2. The Influence of Space Charges on the Quality of the Image. .	279
3. Possibilities of Producing Space Charge Neutralisation . . . .	281
4. Mechanism and Equilibrium of Space Charge Neutralisation .	287
5. The Stationary Beam Plasma . . . . .	295
6. Disturbances of the Beam Plasma . . . . .	299
REFERENCES . . . . .	301
SUBJECT INDEX . . . . .	303
AUTHOR INDEX . . . . .	311
