CONTENTS

CHAPTER 1. **The Atomic Theory of Matter** 1

1.1 The atom and the continuum 1
1.2 The chemical elements 3
1.3 The development of atomic physics 4

CHAPTER 2. **The Kinetic Theory** 7

2.1 The ideal gas 8
2.2 The classical Boltzmann statistics 13
2.3 The Maxwellian distribution of molecular speeds 16
2.4 The equipartition theorem and specific heats 20
2.5 Transport phenomena in gases 23

CHAPTER 3. **Charged Subatomic Particles** 31

3.1 Ions and ionic solids 32
3.2 The discovery of the electron 34
3.3 The motion of charged particles in electric and magnetic fields 37
3.4 Positive rays and isotopes 44
3.5 The electron theory of metals 48
3.6 The thermionic and photoelectric effects 53
3.7 Ionization in gases 59

CHAPTER 4. **Atomic Interactions with Radiation** 68

4.1 The dispersion and scattering of light 69
4.2 The Zeeman and Faraday effects 75
4.3 Blackbody radiation 79
4.4 Atomic energy states 85
4.5 The statistics of energy levels 90

4.6 The nature of x rays 93
4.7 The analysis of crystal structure 96
4.8 X-ray spectra 102
4.9 The absorption of x rays 104

CHAPTER 5. **Photon Mechanics and Relativity** **114**
5.1 Radiation pressure and photon momentum 115
5.2 Inertial and gravitational effects of photons 117
5.3 Newton's laws of motion 121
5.4 The special and general theories of relativity 123
5.5 The Lorentz transformation 127
5.6 Momentum, mass, and energy in the special theory 134

CHAPTER 6. **The Nuclear Atom** **143**
6.1 Radioactive series 143
6.2 The statistics of radioactive decay 146
6.3 The scattering of alpha particles by nuclei 150
6.4 The elementary Bohr theory of the atom 157
6.5 Extensions of the Bohr theory 162

CHAPTER 7. **Quantum Mechanics** **172**
7.1 De Broglie waves 173
7.2 Heisenberg's uncertainty principle 179
7.3 The Hamiltonian and Schrödinger's equations 188
7.4 Particle in a rectangular potential well 194
7.5 The linear harmonic oscillator 197
7.6 Particle in a central field of force 201
7.7 The hydrogenlike atom 207
7.8 Electron spin and the exclusion principle 216
7.9 Relativistic quantum mechanics 222
7.10 Single-electron states 228
7.11 Many-electron states 237
7.12 The theory of transitions 244
7.13 Electromagnetic transitions and selection rules 248
7.14 Atoms in a magnetic field 254
7.15 Quantum statistics 259

CHAPTER 8. **The Quantum Theory of Solids** **272**
8.1 The theory of phonons 272
8.2 Lattice vibrations 277

8.3 The Sommerfeld theory of metals 282
8.4 Conduction in lattices 288
8.5 Paramagnetism of ions and metals 300
8.6 The problem of ferromagnetism 309

CHAPTER 9. **Nuclear Physics** **319**

9.1 Particle accelerators 320
9.2 The detection of charged particles 334
9.3 The neutron and nuclear stability 344
9.4 Elastic scattering processes 364
9.5 Nuclear reaction characteristics 374
9.6 Properties of nuclear states 389
9.7 Nuclear moments 406
9.8 Nuclear forces 413
9.9 The nuclear shell model 421
9.10 The collective model 432
9.11 Beta decay 436

CHAPTER 10. **Particle Physics** **458**

10.1 Cosmic rays 459
10.2 Muons 461
10.3 Mesons proper 464
10.4 Hyperons 473
10.5 Antiparticles 476
10.6 Particle classification and "strangeness" 480
10.7 Neutrinos and nonconservation of parity 484

APPENDIX I. **Fundamental Physical Constants** **493**
APPENDIX II. **Periodic Classification of the Elements and Atomic Weights** **494**
APPENDIX III. **The Natural Radioactive Series** **497**
APPENDIX IV. **Nuclear Data for Light Nuclides** **501**
APPENDIX V. **Classification of Particles and Particle Properties** **504**

INDEX 507
