

CHAPTER 1. Introductory Discussion of the Elementary Particles and Their Interactions	
Section 1. Concept of an Elementary Particle	1
Section 2. Properties of the Elementary Particles	3
Section 3. Types of Interactions	13
CHAPTER 2. Quantum-Mechanical Formalism in Elementary Particle Physics	
Section 1. Relativistic Wavefunctions for Particles of Finite Mass	19
Section 2. Relativistic Wave Equations	23
Section 3. Lagrangian Formulation	31
Section 4. Second Quantization of Fields	36
Section 5. Space and Time Inversions	45
Section 6. Particle Conjugation	58
Section 7. Interactions of Physical Particles and Quantized Fields	63
Appendix	66
CHAPTER 3. Discrete Transformations and Selection Rules	
Section 1. General Properties of the Discrete Transformations .	70
Section 2. Space Inversion and Parity	73
Section 3. Particle Conjugation Operation	89
Section 4. Time Inversion Operation	99
Section 5. CPT and CP Invariance	104
Section 6. Chirality Invariance and the Universal Fermi Interaction	122
CHAPTER 4. Additive Conservation Laws	
Section 1. Additive Quantum Numbers and Gauge Transformations	129
Section 2. Absolute Additive Conservation Laws	136
Section 3. Absolute Conservation Laws, Gauge Classes and Parity	144
Section 4. Approximate Additive Conservation Laws	149
Section 5. Gauge Transformations of the Second Kind	155

CHAPTER 5. Isospin Rotation and Selection Rules

Section 1.	Isospin Multiplets and Additive Quantum Numbers	161
Section 2.	Isospin Invariance of Strong Interactions	172
Section 3.	Extended Particle Conjugation Selection Rules . . .	189
Section 4.	Isospin Selection Rules for Electromagnetic Transitions	193
Section 5.	Isospin Selection Rules for Weak Interactions . . .	198
Section 6.	Theory of Elementary Fields	211
