CHAPTER I

Nuclear Scattering in relation to Nuclear Forces

- 1.1.** Introduction, p. 1. **1.2.** Qualitative and semi-quantitative generalizations, p. 2. **1.2.1.** Nuclear radii, p. 2. **1.2.2.** Binding energies, p. 4. **1.2.3.** Nuclear saturation, p. 4. **1.2.4.** Stability of nuclei, p. 5. **1.2.5.** Shell structure, p. 7. **1.3.** The two-nucleon system, p. 9. **1.3.1.** The deuteron, p. 9. **1.3.2.** Low energy neutron-proton scattering, p. 10. **1.3.3.** Low energy proton-proton scattering, p. 11. **1.3.4.** High energy neutron-proton and proton-proton scattering, p. 12. **1.4.** The three-nucleon system, 13. **1.4.1.** Binding energies of ^3H and ^3He , p. 13. **1.4.2.** Neutron-deuteron and proton-deuteron scattering, p. 13. **1.5.** The meson description of nuclear forces, p. 14. **1.5.1.** The π -meson spin and parity, p. 14. **1.5.2.** Exchange theories, p. 15. **1.5.3.** Weak coupling theory, p. 15. **1.5.4.** The Feynman diagrams, p. 16. **1.5.5.** The hard core potential, p. 18. **1.5.6.** Strong coupling theory and nucleon isobars, p. 19. **1.5.7.** Intermediate coupling theory, p. 19.

CHAPTER 2

Theoretical Concepts and Experimental Methods

- 2.1.** Nuclear collisions, p. 21. **2.2.** Kinematics of elastic collisions, p. 24. **2.3.** Definition of cross-sections, p. 24. **2.4.** Scattering experiments, p. 27. **2.5.** Co-ordinate systems, p. 38.

CHAPTER 3

Charged-particle Scattering Techniques

- 3.1.** General requirements of equipment, p. 40. **3.2.** Ion accelerators, p. 40. **3.2.1.** High voltage sets, p. 41. **3.2.2.** Van de Graaff generators, p. 42. **3.2.3.** Fixed-frequency cyclotrons, p. 45. **3.2.4.** Synchrocyclotrons, p. 47. **3.2.5.** Linear accelerators, p. 48. **3.2.6.** Proton synchrotrons, p. 50. **3.3.** Targets, p. 51. **3.3.1.** Gas targets, p. 52. **3.3.2.** Solid targets, p. 59. **3.3.3.** Miscellaneous targets, p. 64. **3.4.** Measurement of beam current, p. 65. **3.4.1.** Current collectors at low energy, p. 67. **3.4.2.** High energy devices for beam measurement, p. 71. **3.5.** Charged-particle detectors and typical experimental arrangements, p. 74. **3.5.1.** Ionization pulse chambers, p. 75. **3.5.2.** Proportional counters, p. 77. **3.5.3.** Geiger-Mueller counters, p. 89. **3.5.4.** Scintillation counters, p. 89. **3.5.5.** Photographic plates, p. 103.

CHAPTER 4**Neutron Scattering Techniques**

- 4.1.** Differences between charged-particle and neutron scattering, p. 116.
4.2. Neutron sources, p. 117. **4.2.1.** Natural sources, p. 118. **4.2.2.** Photo-neutron sources, p. 119. **4.2.3.** Nuclear reactors, p. 122. **4.2.4.** Reactions produced by positive ions, p. 126. **4.2.5.** Deuteron stripping reactions at high energy, p. 132. **4.2.6.** Charge exchange by very high energy protons, p. 133. **4.2.7.** Production of slow neutrons, p. 135. **4.3.** Neutron scattering from ~1 MeV. to 1 BeV., p. 140. **4.3.1.** Cloud-chamber experiments, p. 142. **4.3.2.** Photographic plate experiments, p. 148. **4.3.3.** Electrical counter experiments, p. 153. **4.3.4.** Time-of-flight experiments, p. 158. **4.3.5.** Measurement of total cross-section by transmission, p. 159. **4.4.** Scattering at very low energies, p. 164. **4.4.1.** Velocity selectors, p. 164. **4.4.2.** Sub-thermal energies, p. 168.

CHAPTER 5**Determination of Beam Energy**

- 5.1.** Introduction, p. 169. **5.2.** Calibration at low energies, p. 170. **5.3.** Range methods, p. 174. **5.4.** Time-of-flight methods, p. 181. **5.5.** Energy measurement above 100 MeV., p. 181. **5.6.** Corrections for energy loss, p. 184.

CHAPTER 6**Low Energy Neutron-proton Scattering**

- 6.1.** Introduction, p. 185. **6.2.** Energy dependence of phase shifts, p. 187. **6.3.** Spherical symmetry of scattering for $E < 10$ MeV., p. 189. **6.4.** The scattering of low energy neutrons by protons, p. 189. **6.5.** The singlet state of the deuteron, p. 191. **6.6.** The scattering length a , p. 192. **6.7.** The effective range and shape-independent approximation formula, p. 194. **6.8.** The intrinsic range b , p. 196. **6.9.** Thermal neutron scattering by protons bound in molecules, p. 198. **6.10.** The scattering of thermal neutrons by ortho- and para-hydrogen, p. 199. **6.11.** The diffraction of thermal neutrons by crystalline hydrides, p. 206. **6.12.** The liquid-mirror reflexion of neutrons, p. 208. **6.13.** The capture of neutrons by protons, p. 208.

CHAPTER 7**Low Energy Proton-proton Scattering**

- 7.1.** Introduction, p. 212. **7.2.** Wave-mechanical treatment of charged particle collisions neglecting the nuclear potential, p. 212. **7.3.** Effect of the nuclear potential, p. 216. **7.4.** Extension of theory to arbitrary angular momenta, p. 218. **7.5.** Calculation of phase shifts for arbitrary potentials, p. 220. **7.6.** Coulomb wave functions, p. 221. **7.7.** Collisions below 3 MeV., p. 223. **7.8.** The shape-independent formula, p. 224. **7.9.** The analysis of p - p scattering data, p. 229.

CHAPTER 8

Scattering of Neutrons and Protons by very Light Nuclei

- 8.1.** Wheeler's resonating group structure method, p. 236. **8.2.** Elastic scattering of nucleons by deuterons, p. 237. **8.2.1.** Equations of motion for elastic neutron-deuteron scattering, p. 240. **8.2.2.** Equations of motion for elastic proton-deuteron scattering, p. 244. **8.2.3.** Comparison with experiment, p. 245. **8.2.4.** Polarization of the deuteron, p. 251. **8.2.5.** Summary of elastic n - d and p - d scattering, p. 252. **8.3.** Inelastic collision of neutrons with deuterons, p. 252. **8.4.** Neutron capture by deuterons, p. 257. **8.5.** Scattering of nucleons by ^3He and ^3H , p. 257. **8.5.1.** Elastic p - ^3He and n - ^3H scattering, p. 258. **8.5.2.** Elastic p - ^3H and n - ^3He scattering, p. 260. **8.5.3.** Comparison of theory with experiment, p. 260. **8.6.** Elastic scattering of nucleons by α -particles, p. 264. **8.7.** Polarization of nucleons in collision processes, p. 269. **8.7.1.** Polarization by scattering from nuclei of spin zero, p. 269. **8.7.2.** Application to the scattering of nucleons by α -particles, p. 273.

CHAPTER 9

Non-central Forces and Spin-orbit Coupling

- 9.1.** Introduction, p. 277. **9.2.** General form of the non-central interaction, p. 278. **9.3.** Multipole moments of a charged-particle system, p. 278. **9.4.** Spectroscopic magnetic moment μ , p. 279. **9.5.** Spectroscopic electric quadrupole moment Q , p. 279. **9.6.** The conservation of quantum numbers, p. 280. **9.7.** The ground state of the deuteron, p. 281. **9.8.** Low energy n - p scattering and exchange forces, p. 283. **9.9.** Spin-orbit coupling, p. 284.

CHAPTER 10

High Energy Neutron-proton and Proton-proton Scattering

- 10.1.** Introduction, p. 286. **10.2.** Spin and isotopic spin, p. 287. **10.3.** Saturation and exchange forces, p. 289. **10.4.** Meson field exchange theories, p. 291. **10.4.1.** 'Neutral' theory, p. 291. **10.4.2.** 'Charged' theory, p. 292. **10.4.3.** Symmetric theory, p. 293. **10.5.** Phenomenological exchange potentials, p. 294. **10.6.** n - p scattering with non-central forces and spin-orbit coupling, p. 294. **10.7.** The Born approximation for n - p scattering with non-central forces, p. 298. **10.8.** p - p scattering with non-central forces, p. 301. **10.9.** The Born approximation for p - p scattering with non-central forces, p. 302. **10.10.** Analysis of high energy n - p scattering, p. 303. **10.11.** High energy p - p scattering, p. 310. **10.12.** The charge-independence hypothesis, p. 312. **10.13.** Summary of high energy results and conclusions, p. 316. **10.14.** Polarization of nucleons by high energy scattering, p. 317. **10.14.1.** Polarization by spin-orbit forces in n - p scattering, p. 318. **10.14.2.** Polarization by spin-orbit forces in p - p scattering, p. 320. **10.14.3.** High energy scattering of polarized beams, p. 321.

CHAPTER II

High Energy Scattering of Neutrons, Protons and Deuterons by Light Nuclei

- II.1.** High energy n - d and p - d scattering, p. 327. **II.1.1.** Simplified model for elastic scattering, p. 329. **II.1.2.** The relation between two- and three-body total cross-sections, p. 332. **II.1.3.** Born approximation for elastic scattering, p. 334. **II.1.4.** Born approximation for total scattering, p. 337. **II.1.5.** Scattering with non-central forces, p. 339. **II.1.6.** The impulse approximation—simplified model, p. 340. **II.1.7.** Inelastic n - d scattering in the impulse approximation, p. 344. **II.1.8.** Multiple scattering corrections to the impulse approximation, p. 350. **II.1.9.** The energy spectrum of ejected protons, p. 354. **II.2** Deuteron stripping processes, p. 354. **II.2.1.** Survey of differential stripping cross-sections, p. 362. **II.2.2.** High energy deuteron stripping, p. 367. **II.2.3.** Angular distributions at intermediate energies, simple stripping theory, p. 369. **II.2.4.** Stripping distributions with nuclear and Coulomb corrections, p. 374. **II.3.** High energy scattering of neutrons by α -particles, p. 378.

CHAPTER I2

Nuclear Models and Resonance Scattering

- I2.1.** Maximum cross-section values and shadow scattering, p. 380. **I2.2.** Resonance and potential scattering, p. 382. **I2.3.** The schematic or continuum model, p. 386. **I2.4.** The optical model, p. 392. **I2.4.1.** Scattering on the optical model, p. 394. **I2.4.2.** Scattering in the resonance region in the gross structure approximation, p. 399. **I2.5.** The statistical model for high energy collisions—recoil events, p. 403. **I2.5.1.** The mean free path, p. 404. **I2.5.2.** Differential cross-sections for neutron scattering and energy transfer, p. 405. **I2.6.** Decay of the compound nucleus according to the evaporation model, p. 410. **I2.7.** Resonance scattering, p. 414. **I2.7.1.** The Breit-Wigner dispersion formulae, p. 416. **I2.7.2.** The absorption and scattering cross-section of neutrons, p. 420.
