CONTENTS

Editors' Foreword v

Preface vii

1. Historical Survey 1
- 1-1 The "Heavy Quanta" of Yukawa 1
- 1-2 Field Equations for Meson Fields 6
- 1-3 Anomalous Magnetic Moments of Nucleons 9
- 1-4 Discovery of the μ Mesons 10
- 1-5 Fate of the μ Mesons 11
- 1-6 Discovery of the π Mesons 16

References 18

2. Invariance Principles and the Determination of the Type of Pions 20
- 2-1 Time Reversal in Classical Theory 20
- 2-2 Time Reversal in Quantum Mechanics 25
- 2-3 Principle of Detailed Balance 32
- 2-4 Determination of the Spin of the Charged Pion 33
- 2-5 Time Reversal in Field Theory 34
- 2-6 Parity 38
- 2-7 Parity in Nonrelativistic Nuclear Physics 40
- 2-8 Parity of the Pions 41
- 2-9 Parity in Field Theory 44
- 2-10 Charge Conjugation 47
- 2-11 Charge Conjugation and Selection Rules 52
- 2-12 Spin of the Neutral Pion 54

References 58

3. Charge Symmetry and Charge Independence 60
3-1 Charge Symmetry in Nuclear Physics 60
3-2 Charge Independence in Nuclear Physics 66
3-3 Charge Independence in Pion Physics 75
3-4 G Conjugation 87
Appendix. Clebsch-Gordan coefficients 89
References 91

4. Theory of Pions 92
4-1 Choice of the Pion-Nucleon Interaction 92
4-2 Phenomenological Theory of Pion-Nucleon Scattering 94
4-3 Polarization of Nucleons 103
4-4 Perturbation Theory 104
4-5 Properties of the S Matrix and Møller's Formula 111
4-6 Optical Theorem 121
4-7 Wick's Theorem 123
4-8 Examples of the Perturbation Calculation 127
4-9 Dispersion Relations for Pion-Nucleon Scattering 135
4-10 Comparison of Dispersion Relations with Experiment 150
4-11 S-Matrix Theory and Dispersion Relations 155
4-12 Renormalization in the Dispersion Theory 160
4-13 Some Remarks on the Scattering Equation 170
References 175

5. Dynamical Properties of Pions 177
5-1 Low-Energy Pion-Nucleon Scattering 177
5-2 Photo-Pion Production 184
5-3 Electromagnetic Structure of Nucleons 190
5-4 Experimental Determination of Form Factors 196
5-5 Dispersion Relations for Form Factors 203
5-6 Unitarity Condition for Form Factors 205
5-7 Calculations of Nucleon Form Factors, I 211
5-8 Calculations of Nucleon Form Factors, II 216
5-9 The Mandelstam Representation 221
5-10 Experimental Status of Multipion Resonances 224
5-11 Implications of Vector Mesons in Pion Physics 229
5-12 Low-Energy Limit Theorems and the Chew-Low Extrapolation Method 233
References 236

6. Strange Particles and Hyperfragments 239
6-1 Experimental Discoveries of Strange Particles 239
6-2 Why Are the Strange Particles Strange? 246
6-3 Hypothesis of Charge Independence 247
6-4 Stability of Matter 251
6-5 Introduction of Strangeness 252
6-6 Problem of the Neutral K Mesons 265
6-7 The Selection Rule $|\Delta I| = \frac{1}{2}$ 276
6-8 Hyperfragments 288
6-9 Strange Resonances 298
Appendix. Tables of Elementary Particles 309
References 311

7. Violation of Parity in Weak Interactions 315
7-1 The θ-τ Puzzle 315
7-2 Dalitz' Analysis 317
7-3 Violation of Parity in Weak Interactions 323
7-4 The CPT Theorem 329
7-5 Time-Reversal Invariance—CP Invariance 339
7-6 The Neutrino 344
7-7 Applications of the Two-Component Theory 354
7-8 γ_5 Invariance and Lepton Conservation 360
7-9 Universal Fermi Interaction 368
7-10 Hyperon Decays 378
7-11 The Goldberger-Treiman Relation 389
References 399
