CONTENTS

Preface v

1 Canonical Quantization of Fields 1
- 1-1 Variational Principle 2
- 1-2 Canonical Equations 9
- 1-3 Variational Principle and Conservation Laws 14
- References 20

2 Quantization of Free Fields 21
- 2-1 Real Spinless Fields 21
- 2-2 The Meaning of Field Quantization—Nonrelativistic Examples 30
- 2-3 Invariant Green's Functions and Peierls' Method of Quantization 35
- 2-4 Complex Spinless Fields 46
- 2-5 Complex Spin-1 Field 51
- 2-6 Electromagnetic Field 63
- 2-7 Lorentz Condition 75
- 2-8 Difficulties with the Lorentz Condition 78
- 2-9 Dirac Fields 87
- Problems 100
- References 101

3 Quantization of Interacting Fields 102
- 3-1 Schrödinger Equation 102
- 3-2 Multiple-Time Formulation 103
- 3-3 Transformation Functional—S Matrix 108
- 3-4 Yang–Feldman Formalism 109
- References 113

4 Covariant Perturbation Theory 114
- 4-1 Examples of Interacting Fields 114
- 4-2 Decomposition of Field Operators 118

4-3 Covariant Integration of the Tomonaga–Schwinger Equation 121
4-4 Perturbation Expansion of Heisenberg Operators 127
4-5 Evaluation of the S Matrix—Wick's Theorem 131
4-6 Feynman Diagrams 139
4-7 Removal of Bubble Diagrams 144
4-8 Transition Probability 147
References 148

5 Simple Applications 149
5-1 Scattering of an Electron by an External Field 149
5-2 Compton Scattering 155
5-3 Pion–Nucleon Scattering 162
5-4 Application to Decay Processes 168
5-5 Derivative Couplings and Lagrangian Method 183
Problems 190
References 192

6 Renormalization 193
6-1 Conditions for the Proper Decomposition of the Hamiltonian 193
6-2 Mass Renormalization 196
6-3 Field-Operator Renormalization 200
6-4 Renormalized Propagation Functions 206
6-5 Vertex Renormalization 220
6-6 Electron in an External Field 233
6-7 Double Meaning of the Conservation of Charge and Ward's Identity 237
Problem 245
References 246

7 Green's Functions and Bound States 247
7-1 Ladder Approximation and the Bethe–Salpeter Equation 247
7-2 Wick's Solution 250
7-3 Schwinger's Theory of Green's Functions, I 254
7-4 Schwinger's Theory of Green's Functions, II 261
7-5 The Gell-Mann-Low Relation 265
7-6 The Reduction Formula and the S-Matrix Elements in Terms of Green's Functions 269
7-7 The S-Matrix Elements for Composite-Particle Reactions 280
7-8 The Normalization Problem 285
7-9 Examples of the Bound-State Problems 289
Problems 300
References 301

8 Dispersion Theory 302
8-1 The Källén–Lehmann Representation 302
8-2 Calculation of the Propagation Functions 311
8-3 The Asymptotic Condition 319
8-4 The LSZ Reduction Formula 322
8-5 Unitarity 329
8-6 Arbitrariness in the Choice of Field Operators 332
8-7 Dispersion Relations for the Vertex Functions 335
8-8 Calculation of Vertex Functions from Dispersion Relations 342
8-9 Application to Electrodynamics 347
8-10 Gauge Invariance and Dispersion Relations 350
8-11 The Muskhelishvili–Omnès Equation 359
8-12 Møller's Formula and the Optical Theorem 363
8-13 Dispersion Relations for Scattering Amplitudes 371
8-14 The Goldberger–Treiman Relation 384
8-15 The Adler–Weisberger Formula 396
8-16 Landau–Cutkosky Theory 406
8-17 The Mandelstam Representation 419
8-18 The Cini–Fubini Approximation 429
8-19 The Partial-Wave Dispersion Relations 437
8-20 The N/D Method 441
8-21 Further Discussion on the Scattering Equation 445
8-22 Multichannel Integral Equations 455
Problems 459
References 461
