

# CONTENTS

<b>Editor's Foreword</b>	v
<b>Preface</b>	vii
<b>Chapter 1 Nonrelativistic Scattering Theory</b>	1
1-1 Formulation of the Problem	1
1-2 Integral Form of the Schrödinger Equation	4
1-3 The Born Series Expansion	10
1-4 Calculation of the Scattering Amplitude	11
<b>Chapter 2 Properties of Partial Waves</b>	15
2-1 Separation of the Schrödinger Equation in Partial Waves	15
2-2 Study of the Radial Equation	20
2-3 Analytic Properties of the Partial-Wave Amplitude as a Function of $k^2$	21
2-4 The Left-Hand Cut	22
2-5 The Right-Hand Cut	23
2-6 Analytic Properties of the Partial-Wave Amplitude	25
2-7 Physical Aspects of the Partial-Wave Formalism	26
<b>Chapter 3 Analytic Properties in Energy and Momentum Transfer</b>	29
3-1 Kinematics	29
3-2 Analytic Properties in Energy	30
3-3 Analytic Properties in Momentum Transfer	33
3-4 Treatment of Exchange Forces	36
3-5 Bound States	37

<b>Chapter 4</b>	<b>Introduction of Complex Angular Momenta</b>	<b>41</b>
4-1	Interpolation between Physical Values of Angular Momentum	41
4-2	The Sommerfeld-Watson Formula	43
4-3	Physical Interpretation of Regge Poles	46
4-4	Behavior of Regge Trajectories	48
4-5	Exchange Forces—Signature	50
4-6	Asymptotic Behavior in Momentum Transfer	52
<b>Chapter 5</b>	<b>Kinematics of Relativistic Scattering—Crossing</b>	<b>54</b>
5-1	Kinematics	54
5-2	Crossing	58
5-3	Crossed Reactions	62
5-4	Kinematics of Crossed Reactions	64
5-5	First Example: p-n Scattering	66
5-6	Second Example: Pion-Nucleon Scattering	66
5-7	Third Example: $K\mu_3$ Decay and Dalitz Plot	66
5-8	A General Case: Associated Production	70
<b>Chapter 6</b>	<b>Relativistic Scattering Theory “à la Mandelstam”</b>	<b>72</b>
6-1	Formulation of the Problem	72
6-2	The Invariant Scattering Amplitude	74
6-3	The Nonrelativistic Region	75
6-4	Another Energy Cut	77
6-5	An Example: Proton-Antineutron Scattering	78
6-6	The Mandelstam Hypothesis	80
6-7	Application to the Properties of Nucleon-Nucleon Potential	80
6-8	Exchange of Other Particles	82
6-9	Application to Pion-Nucleon Scattering	86
6-10	The High-Energy Domain	88
6-11	Asymptotic Properties of $A(s, t, u)$	92
6-12	Dispersion Relations	94
<b>Chapter 7</b>	<b>Relativistic Regge Poles</b>	<b>100</b>
7-1	The Paradoxes	100
7-2	Comparison with Nonrelativistic Theory	102
7-3	Chew’s Hypothesis	104
7-4	Exchange Forces	105
7-5	Trajectories	106
7-6	Generalizations	107
<b>Chapter 8</b>	<b>Comparison with Experiment</b>	<b>110</b>
8-1	Experimental Tests in the Direct Channel	110

## CONTENTS

xi

8-2	Experimental Tests in the Crossed Channel	112
8-3	Total Cross Sections. The Pomeranchuk Pole	113
8-4	Total Cross Sections. The Satellite Poles	115
8-5	The Diffraction Peak	117
8-6	The Inelastic Experiments	120
<b>Bibliography</b>		122
<b>Index</b>		123
